Acariensluras.

Agricultural Productions of the United States.

The externie, I area of the United States, cover us a it dues, some twenty degrees of latitude, and about fifty-fire degrees of longitude, all in one compast mass, retalets it the mot favored u ti n o: the face of the earth, in the variety of its agricultural productions. There is nothing essential to the existence of man, and out few of the fuxories which gratify the palate, which a e not raised in the United Sizies. But this is not the only advantage which our people possess in the production of load. In the article of bread stuff, the staff of hie, a deficier cy in the supply of which is productive of so much many in many contries, so wide is the extent of tenito y, comprehending so many degrees of latin ie, and longitude, which is planted, that a fimine is an event which is almost placed beyond the tounds of possibility. If the crops fail in one see non, the surplus is so great in another that the fail ur is searcely left. For instance the tricle of wheat, the principal staple of bread stoff. Thigrain is raised in every State and Territory of the Union, Su also with rye, Indian corn and potatoes Balley is raised in all the States but Louisiana --Buck wheat in all but Louisiana and Florida, Alt the Southern States, with the exception of Mary land as well as one or more of the Western States, produces rice. Every State except Delaware, makes sugar. Of the articles necessary for the production of meat, hay, oats, &c , every State produces more or less. These facts prove that our nation need be dependant on no other for the necessaries of life. even in the most unfavorable seasons. How much more favored are we in this respect than our great commercial rival-Great Britain ! There the whole commercial system is liable to be disarranged by a year of comparative famine, or by the failure of

a single crop.

Otio ruises more wheat than any other State;-Tenes-ee raises most com ; Pennsylvania the most rye and buckwheat; South Carolina the most rice : and New York the most bailey, potatoes and hav. The production of wheat has for many years been extending on the West and contracting on the East The wheat lands of New York, Pennsylvania and Maryland, are becoming in a measure exhausted, and their yield per acre is much less in proportion than t iat of the newly cleared, and prairie fand of the West. The Western Sates, indeed, are now par excellence, the wheat growing States of the Union and it is to them that the future millions must look for the principal means of sustenance. It will be conturies before the Union States will teem with a population which, like that of England, will require all which can be raised from the soil to suppor life, or before they will be forced to depend upon any other nation for the scaple article for lood. Indeed, it may well be doubted whether science will not keep pace with the growth of population, and teach our farmers the proper materials to restore the exhausted fertility of the soil, thus rendering an as productive as double the quantity of land as above prices will be allowed to Clubs ordering four at present cultivated. When we consider the almost countless millions of human beings who will uliisistence within the present limits of the United States, we are lost in the mazes of speculation at the luture destiny of our beloved country.

BORNING LANDS AGAIN .- In answer to "An Old Fallow Burner" in a recent number of the Farmer and Mechanic, I will say that one field of about six acies once covered with a mixture of Oak, Hickory and Pine, exceeding one hundred cords to the acre, and on what was then the most valuable part of Any distance on trace dug 500 mides, 9 cents over 540 mid " 1500 and " 1500 mid " 1500 mides, 9 cents Over 540 mid " 1500 mid " 2500 mides, 9 cents Over 1500 and a 4 2500 mides, 9 cents April, and after taking of a part of the best timber, was burned over in June and burned clean, and it was so in fact, for I was unable to get enough for Over 500 and 4 1500 4 6 4 Over 1500 and 4 2500 4 14 4 several years to pay for tilling, and then it was only by ploughing deep and turning up a new soil to the sun which in a few years much improved it. Anoll . er field adjoining was gradually cleared and the wood and timber sold off leaving the brush to rot on the ground. It became a pasture was finall fenced in with the other field, ploughed and planted , without manure, and gave me from 60 to 70 bushels of corn per acre, and when in grass the yield wis quite double to the adjoining which was burn ed so clear. Since then I have burned as little as possible, and my neighbors profiting by my example now follow my plan which has been demon strated before them. As for yellow pine lands I should not quite like to wait for the timber to rot, but I would not burn more than I was obliged to, and that in heaps then plough and put on grain and grass seed." All know that pine lands generally do not come in to grass as readily as lands bearing other timber, and hence I would plough and seed liberally. I have tried this plan on land bearing pine and scrub oak, and am satisfied it is better than burning very clear. Now Mr. Editor if your correspondent will make the experiment and keep his Dr. and Cr as faithfully as I have for more than 30 years, I think he would be satisfied on the subject, JONAS.

GREAT DRITTER QUARTERLIES Blackwood's Magazine. Important Reduction in the Rotes of Postage !-Premiums to New Subscribers!

TONARD SCOTT & CO., No. 54 Guld al, New, L York, continue to publish the following Unitsh erimicals, 117 The Lon don Quarterly Review. (Conservative).

Cousty of Bradd**aux** for .

The Ellisburgh Review. (Whig). The North Bransh Review. (Free Church). The Westmanster Review (Libgral). Blackword's Edmburgh Magazine. (Toty).

Al hough these works are distinguished by the Pulitical shades abure indicated, jet but a small of their contents is devoted to political sub-

It is their literary character which gives iec's. hem their chief value, and in that they stand conlessedly above all other journals of their class .-Blackwood, still under the masterly guidance. of Christopher North, maintains its ancient celebrity. and is, at this time unusually attractive, from the serial works of Bulwer, and other literary notables. written for that magazine, and first ap earing in it columns, both in Great Britain and in the United States. Such works as "The Castons" and "My New Novel," (both by Bulwer), "My Peninsular Medal," "The Green Hand," and other serials, of which numerous rival editions are issued by the eading publishers in this constry, have to be reprinted by those pullishers from the pages of Blackwood, after it has been issued by Messrs. Scott, & Co., so that Subscribers to the Reprint of that Magazine may always rely on having the earliest reading of these fascinating tales.

These Reprints have now been in ccessful operation in this country for twenty years, and then circulation is constantly on the increase, notwithanding the competition they encounter from American periodicals of a similar class and from numerous Electics and Magazines made up of selections from foreign periodicals. This fact shows clearly the high e-tomation in which they are held by the ntelligent reading public, and affords a guarantee that they are established on a firm basis, and will be continued without interruption.

TREMS AND PREMIUNS.

Alisecila icoasi? This is no Quartery ! ORRICK'S VERMIEUGE Or Worm Destroyer. This Medicine contains no Mercury, nor any other Mineral substance It is purely Vegetable.

This remedy for worms is our of the most extraor-linary, ever used. It entertually eradicates worms of all sorts from children and adults. Thousan's perish by worms without the real caure A nousan's person by wome window the real cause being known. Some other reason is assigned for the sickness, until too lafe to cure the real cause. What immense responsibility tests phon, the parent who does not know, and the doctor who does not undorstand, the complaint which is destroying those pre-cious flowers of life-children. What should be dons2.3. gaS

The answer is plain. Give the Vermiluge, which will be sure to do good if they have, no worms, and if they have, it will destroy and eradicate them with a certainty and precision truly astonishing. There is no mercury or mineral in it. Mercury in

the basis of most worm remedies; and the remedy is sometimes worse than the disease. So uever use loz ringes, but rely upon this. Every person will be con-vinced on one trial that it is the most perfect cure ever invented.

The imments sale that this Vermifuge has, is a sur test of its value and the estimation in which it is held by families. It would be quite too expensive to pub lish the volumes of certificates that have been given for this article, and the users of it are requested i pread the name to a persons whom they think will be benefitted by it.

Speak of it in all families, and you will do your du y to your follow creatures, and feel assured of the approbation of all good mon, and will receive your reward heaven. We call on all good citizens to make known the el

feets of this wonderful remedy. Remember, and ask for Orrick's Vermifuge.

Startling Tacts.

Hundreds of children and adults are lost yearly with worms, when some other cause has been supposed \$ be the true one.

It is admitted by all doctors that scarce a man, wo man, or child exists, but what sooner or later are troubled with worms, and in hundrells of cases, sad to relate, a supposed fever, scarlatina, cold, or some other ailing carries off the flower of the human familywhile in truth they die of worms! and these could have been eradicated in a day, by the ass of one bottle of ORRICK'S VERMIFUGE.

How sickening the thought that these things should be-and wherean ever forgive themselves for not trying this WORM EXTLEMINATOR, when they know that even if the case was not worms, this remedy could not by any possibility do hurt-but always ood as a purgative, let the ciscore bo what it may. How important then to use it. and who will dare to take the responsibility to do without it ? Let all pabrick trowels; lathing hammers, shovels and tongs ; rents ask themselves this question in truth and sober tiera,

To Yours FARMERS .- One of the most important parts of a young agriculturist's professional educa- BOOTS & SHOES tion, in the charactericis, marks, qualities, and carebilities of all descriptions of all live stock necessa. ry for agriculture. Some knowledge of sketching or drawing live animals would be highly conductive to the papil ascertaining a proper idea of shape and proportion ; and should there be an intelligent bu cher in the neight orhood, I would recommend him to see as much of his business as he can consistent ly with his occupation-to weigh the live animal ly with his occupation-to weigh the live animal tet boots; do, shoes; black lasting and sik gaiters i from its handling, size, and appearance in his mind; walking shoes, buskins, &c. Misses' gaiters and shoes, attending the slaying of each animals, examining its weight when dead, and comparing this with his own upinion of it when alire, would all lead him to form more correct and solid opinions in his future transaction with fat stock.

Rrs FLova -Rye floar, when made into good light bread and allowed a day or two to ripen, is very nuritions and wholesome. Rye flour more nearly resembles wheaten flour in its composition than any other; it has, however, more of certain gummy and sugary substances, which makes it tenacious, and also imparts a sweetish taste All grains and roots which have much starch in them undergo a great change in their chemical composiuon by baking-flour becomes more nutritious, and more easily digestible, because more scluble. This is also the case with flour-that is, the starch, gluton and angar, of potatoes-when baked, or what istatill better, when roasted in the hot embers of an old ashioned farm-house fire.
