Towanda, April 1, 1854 9 'ME' SHI 'NI' 'NI SHI 'NI' HE 'NI' 9

J. ITTNTOSE, DENTIST, HAVING entered into an arrangement by which he can have BLOCK TEETH furnished to order, informs the public that he is prepared to mound suction plates in this new and improved method, The great superiority of the block style of mounting plates is at once apparant to those who have for any length of time worn artificial teeth. To those who have yet to be initiated, it is only necessary to say, that in the old method of mounting the plate with a succession of single teeth, it was no unusual thing for a tooth to drop off; by the new method no such accident can take place, the teeth being all connected by each other. In the second place, the plate with block teeth is always clean and sweet, bei cause there is no chance for deposits of food being made, however small, the upper rim being capped thus effectually precluding even the saliva from ma. king a lodgment, and in the third place, the adaptation of the grinding surface is better fitted for maslicatory purposes, the irregularities being made exactly to correspond with those of the teeth of the op posing jaw.

With a properly fitted suction plate, having an air chamber, and mounted with block teeth, a person may crack kickory nuts with impunity. " And sleep in spite of "--toothache ALL WORK WARRANTED.

Towanda, March 10, 1854.
