Farmer's Department.

Root Crops.

To secure, in the most economical and appropriate way, a regular supply of roots for a whole winter several kinds, should be raised. good condition much beyond the end of De- JAMES MACFARLANE, ATTORNE S cember or beginning of January. A calculation should therefore be made as to the amount likely to be needed until about the first of Jamuary, at the rate of from a peck to half a bushel each per d y for cows and cattle, and a proportionately less quantity for sheep ; and hough of land be sown with some variety of the common white turnip to secure a supply for the period just named. As an average crop of white turnips ranges from 600 to 1,000 bushels per acre, a calculation can be made on this basis, the yield being likely to correspond in quantity to the condition of the soil and the amount of care and labor which can be spared for the cultivation of the crop. For the supply of roots for the remainder of the winter, ruta bagas alone will answer, or what would be better still, there may be ruta bagas, mangolds, carrots, parsnips, sugar beets, in almost any proportion. Any of these, if well stored, will keep in good condition as long as roots may be wanted. Were nutritiveness alone regarded, ruta bagas or some other of the roots last named, might be used during the whole of the winter season. But, though white turnips contain less nutritive matter, this is counterbalanced by their requiring less manure or a less rich soil, or, in other words, by their leaving the soil with a greater supply of ammonia for the wheat or other crop, requiring ammoniacal supplies, which may follow on the same land. Another advantage of the white turnip crop is that it requires a shorter season to bring it to maturity than any of the other roots. It may be sown as late as August, or after wheat, peas, early potatoes or other early crops have been removed from the land upon which it is to be raised. And still further. as a recommendation of this crop, it may be raised in a sufficient quantity for the supply of stock on the majority of farms by sowing the seed, when the weather is showery or the soil is not suffering from drought, between the rows of Indian corn. The corn, we believe, will suffer no injury ; and if more turnips are thus raised than are likely to be needed until January, they may be left unharvested, and sheep turned in on them late in the fall .--Country Gentleman.

When it is considered that fruit is now sold at not less than two dollars a bushel in our markets, this may be considered as farming to some purpose and profit.

To PRESERVE STRAWNERRIES WHOLE.— Make a syrup boiling hot, and having pick-ed fine large strawberries free from hulls (or, if preferred, leave them and half an inch of the stem on,) pour it over them; let it remain un-til the next day; then drain it off and boil again : rature it hot to fourier that the fully of the Dioces of College of New Jersey, Princeton again ; return it hot to the fruit ; let them remain for another night; then put them into the kettle and boil gently for half an hour ; cut one in two ; if it is done through, take them from the syrup with a skimmer, and spread them on flat dishes to cool; boil the syrup until thick and rich ; then put the fruit into glass jars ; let the syrup cool and settle : then pour it carefully off from the sediment over the fruit.

DIRECT & TO-&-FRO ELECTRO MAGNETIC MACHINE. J AMES HARRIS, ELECTRO TAGNETIC MACHINE. J AMES HARRIS, ELECTRICIAN, of Towanda, respect-from New York the celebrated Electro-Chemical Bath, which has proven to be one of the most 'important and wonderful discoveries of the age, from its ability to extract minerals from the human system. Some eight years ago, a physician of Cincinnati disco-vered the process of extracting minerals from the body, an electro-gilder, having suffered from the introduction of poisonous minerals into his system in the prosecution of his art, conceived the idea of removing them by the same processes, he succeeded in doing so, and quickly recovered. He then applied the same means to others similarly af-fected, with like results. His success exceeded his most sanguine expectations, for mot only did these Baths remove mineral poisons, but cared many diseases, some of which were the result of minerals, and some were not. More recent experiments have fully confirmed the sin-gular power of this Bath to draw from the system all mi-nerals that may be lodged therein, to the great detriment of health. Very often persons are afflicted by diseases which are beyond the comprehension of the most skilful physicians, and which are the effect of poisonous mine-rals accumulating in the system for years, taken in the shape of ealomel, lead, &c. Xe. The following are some of the diseases cured by these baths: Rheumatism, Paralysis, Palsy, Palmer's Cholic, Chronic Ucers, Glandular Swellings, Scronfua, Cancer, Neuralia in all its forms, Salt Rheum and Humors of all kinds.

Kinds. He has also S. B. Smith's newly invented DIRECT AND TO-AND-FRO ELECTRO MAGNETIC MACHINE. which is a great improvement on the Magnetic machines hereto-fore in use. With the aid of the Bath and Machine, we have at command all the available medical efficiency of Electricity. The medical power of the Machine is very great, in introducing medicines into the system through the pores of the skin—applying it directly to the parts af-fected, which gives an increase of medicinal power over that of taking it into the stomach, rendering it particular-ly efficacious in all local diseases. I am now prepared to apply these Baths, and also the Machines, at my honse in the south part of the borough of Towanda, or I will visit patients at a distance, who are unable by reason of disease to come to this place, at mo-derate prices.

LIOUOR STORE.

RAIN WATER CISTERNS .- We would advise those who are about to dig cisterns, to hold rain water, to consider whether it is not worth their consideration to make their cisterns above ground. Make a heavy trussel work, then a heavy frame work of the dimensions then a heavy frame work of the dimensions desired—board that up, line with lead, cover March 26th 1856 and will continue fourteen weeks. it with a tin roof painted, and direct the water into it from the roofs. It will last a quarter of a century with care; and by it you have only to turn a cock to let water run, instead of pumping it up with much labor. If well put up, it will never leak.

MUD .- There are many farmers who scarcely seem to be aware of the value of the manure which can be obtained from the margins of many rivers and creeks. In most cases this heavy black deposit is the richest part of

the excrement and absorb the liquid.

SAW DUST .- Spread saw dust over the floors and stalls of your cattle houses every morning and night; cleanse them thoroughly, and let care be exercised to prevent the unnecessary accumulation of filth. Saw dust placed in your hog styes, sheep cotes and horse stalls, will come out excellent manure, highly salutary to most favorable results Every partiele of alimentary matter you save adds to the actual resources of the farm.

CORN STALKS .- A writer in the American Agriculturist states that he thoroughly cured Agriculturest states that he thorough of the heaves, a fine young mare afflicted with the heaves, by feeding her on corn stalks, and that the disease never returned. The writer quoted the writer quoted is a state of the state Judge Buck's opinion as to corn stalks being a remedy, that distinguished agriculturist having had a horse afflicted with that disorder, which disappeared after being so fed.

BARLEY .- The high price of barley is turning the attention of farmers to its cultivation, in lieu of oats.

GOOD ADVICE .- Always give the soil the first meal If this is well fed with manure, it will feed all else-plants, animals and man.
