Farmer's Department.

November Garden Work.

The work in the garden this month is chiefly to save the several crops grown. Gardens will be found to be greatly bene-

fitted by having them dug deeply in the au-tumn, and having the lower soil exposed to the frosts of winter. It is better than a dressing of manure. In the spring when garden operations commence, the ground will be found in the mellowest condition, requiring only onehalf the labor, and probably producing twice the crops, than if left untouched in the antumn. Remember, it cannot be dug too deeply. If the clay and virgin soil turn up, so much the better.

WINTER SPINACH .- If not already done, have your winter spinach thinned so as to stand 4 inches apart in the rows, and thoroughly relieved from grass and weeds.

SMALL SALADING .-- Sow seeds of these hot-beds.

CULINARY HERBS, &c .- Thyme, Sage, Garlic, Shallots, Chives, &c., may still be set out, the earlier this month the better.

CABBAGES .- Take these up and store them away.

OKRA, for winter use, should be taken off the stalks green, strung on thin twine, and hung up in the store-room for winter use. For soups there is nothing like it.

SPINACH, intended for early spring use, should have a slight covering of long straw, untangled, which can be kept to its place through the winter by laying over it a few bean poles. It will come out in the spring, green and vigorous.

STRAWBERRY BEDS .--- If you have not already done so clean off your strawberry beds, fork in manure between the rows, that done, place straw between the rows, and fork or peg that down to prevent its being blown off. CELERY .- Earth up your celery to bleach as

long as the weather will permit.

-to be transplanted next fall, where they are to permanently stand-the distance when transplanted should be six feet apart.

RASPBERRIES .--- These may be set out as long as the weather remains fair and open.

FRUIT TREES .- These may be pruned this month as long as the weather remains fine and open. In pruning no limb should be cut off unless it be dead, or interlaps so as to exclude the sun and air ; the wound should be rendered smooth, and dressed with a mixture comprised of equal parts of rosin, beeswax and tar, and capped with ironmongers' paper or cotton cloth .- Baltimore Sun.

KEEPING CELERY OVER WINTER .- Celery will keep perfectly well in the open ground providing the frost can be kept from it ; but where it is known that the frost of an ordinary winter will penetrate to the depth of two and a half feet in the level soil, it will at once appear evident that in these northern latitudes this is all but a hopeless task to perform .--Where it is desirable to do so, the best way would be to allow plenty of room, so that a large bank of earth could be put on just be-fore frost sets in ; on this again a thicker coat-ing of straw to be capped with boards nailed together, to keep off the wet. If properly put away in a very cool cellar

If properly put away in a very cool cellar or shed it will last the greater part of the win-ter. Leave it in the ground as late as consis-tent with safety, then take up with a good bunch of roots, tie each head with a piece of ctring and steip off any larges likely to decorr the Winter Term commences November 26, and contin-mediate 14 weeks, besides 10 days recess at Christmas. EXPENSES FER TERM: Payable invariably in advance-Fuel and contingencies all included: Tuition in the Fifth class, (primary) per term,.... \$4... 6 If properly put away in a very cool cellar string and strip off any leaves likely to decay. Have enough mould or sand in the cellar, just moist, but not wet, in readiness. Commence against the wall, or put some boards, laying a little soil up to it; put a row of celery, near-ly perpendicular, and not quite close enough together to touch; then put on some of the soil, another row of celery, and so on. When Guided the comment solution is the parent of the solution of t finished, the green leaves should just project French, German, Spanish or Italian, each,..... above the soil Country Gentleman.

THE ELECTRO CHEMICAL BATH, DIRECT & TO-&-FRO ELECTRO MAGNETIC MACHINE.

JAMES HARRIS, ELECTRICIAN, of Towanda, respect-

JAMES HARRIS, ELECTRICIAN, of Towanda, respect-finity informs the public that he has lately procured from New York the celebrated Electro-Chenical Bath, which has proven to be one of the most important and wonderful discoveries of the age, from its ability to extract minerals from the human system. Some eight years ago, a physician of Cincinnati disco-vered the process of extracting minerals from the body, by galvanism : more recently, M. Verges, of New York, an electro-gilder, having suffered from the introduction of poisonous minerals into his system in the prosecution of his art, conceived the idea of removing them by the same processes, he succeeded in doing so, and quickly recovered. He then applied the same means to others similarly af-fected, with like results. His success exceeded his nost sanguine expectations, for not only did these Baths remove mineral poisons, but cured many diseases, some of which were the result of minerals, and some were not. More recent experiments have fully confirmed the sin-gular power of this Bath to draw from the system all mi-nerals that may be lodged therein, to the great detriment of health. Very often persons are afflicted by diseases which are beyond the comprehension of the most skilful physicians, and which are the effect of poisonons mine-rals accumulating in the system for years, taken in the shape of calomel, lead, &c. &c. The following are some of the diseases cured by these baths: Rheumatism, Paralysis, Palsy, Painter's Cholic, Chronic Ulcers, Glandelar Swellings, Scrofula, Cancer, Neuralia in all its forms, Salt Rheum and Humors of all kinds. He has also S. B. Smith's newly invented DIRECT AND

kinds. He has also S. B. Smith's newly invented DIRECT AND He has also S. B. Smith's newly invented DIRECT AND TO-AND-FRO ELECTRO MAGNETIC MACHINE, which is a great improvement on the Magnetic machines hereto-fore in use. With the aid of the Bath and Machine, we have at command all the available medical efficiency of Electricity. The medical power of the Machine is very great, in introducing medicines into the system through the pores of the skim-applying it directly to the parts af-fected, which gives an increase of medicinal power over that of taking it in the stomech rendering it marticular.

fected, which gives an increase of medicinal power over that of taking it into the stomach, rendering it particular-ly efficacious in all local diseases. I am now prepared to apply these Baths, and also the Machines, at my house in the south part of the borough of Towanda, or I will visit patients at a distance, who are unable by reason of disease to come to this place, at mo-derate prices. I am also sole agent for Bradford county, for the above Machines. To wanda, December 22, 18.

troughs should be replenished with a small quantity of food at a time, and kept always clean and well seasoned with salt.

PUTTING LIME INTO HAY .- " It is said " that lime slacked to powder and sprinkled upon clover partially dried, when it is put into the barn, will act as an absorbent, prevent heat and fermentation, and that the clover will come out in good condition in winter, and cattle eat it readily and thrive well upon it. We would not do it. If cattle are sick and need a little lime water, give it to them, but do not compel them to eat caustic lime daily, or let the hay alone and starve. If lime must be used in hay, then dissolve it and use clear lime-water only -but salt is far better.-Agriculturalist.

SCRATCHES IN HORSES .- " It is said " that this often troublesome disease, unless very bad, may be cured by washing thoroughly with soapsuds, and then rubbing with lard fried out of salt meat. Keep clean, and wash and grease every other day until a cure is effected. Leaving mud to dry upon the legs of a horse is one great cause of this disease, and many horses are injured by want of care and cleanliness when driven in muddy weather.

KICKING COLTS .- Mr. W. L. F. Jones, of KICKING COLTS.—Mr. W. L. F. Jones, of Ashbury, gives us the following mode of break-ing colts of the bad habit of kicking. When-ever a colt kicks, he takes hold of the head and neck gently, by clapping his arm around and holding on to the nose until he ceases to struggle, patting him occasionally and speaking kind words to him. By doing this a few times, he says the worst case can be cured.

MANURE HEAPS .- The usual offensive odor and evaporation from them may be entirely prevented by sprinkling over the dung heap, by means of an ordinary water can, a solution of a pound of common green copperas in a gallon of water.

E. S .- When taken without other branches,.
