per acre, judging from the amount of water oltnined from each stalk. One of my neighbors, Mr. A. Degan, obtained from seven choice stalks one gallon of water; and in another trial made by Mr. McCleary, Sen., and myself, we pressed from ten stalks one gallon and a quart. . The number of stalks in a hill should he from four to six. In my calculations I only estimate one quart of water to the hill, allowing sixteen hills per square rood, which will make 2,560 hills to the acre; and this, at one

They are rarely attacked with disease, little or no grain is given them; or if given, when supplied in small and regular quantities. The most frequent causes of disease, are high and irregular working, and exposure and water when warm by exercise.

A great proportion of our horses are too well fed-obtain more food than they require. In this land of plenty most of our raluable horses are overfed, and more especially does this happen among animals owned by wealthy and liberal individuals. The impression we wish to convey to the mind of the reader is, that the food of such, is not proportioned to labor —in other words, there exists a disproportion between the amount of carbon taken in the form of food, and the oxygen received in the process of respiration. Now to illustrate this, SEMI-WEEKLY TRIBUNE. one or the other the necessary amount of exper year. ercise; they stand up to a full crib, from day, to day; enjoying, or rather, gorging them-selves with a certain amount of folder, over and above what they actually require, and much more than they really need; the surplus is often stored up in the form of fat, and this induces acute diseases, and they die of too much food and care. It is very rare that we have occasion to recommend a man to feed his horse more liberally, but almost always the reverse. Starvation is said to be the cause for many equine diseases, but so far as our experience goes, such cases are, in this country, very rare.

We conceive the term starvation to be a libel upon civilization; and so infrequent is its application among a nation of husbandmen, that it is omitted in our dictionaries. A man on a barren rock, or a horse in the deserts of Arabia, might probably starve, but the idea of the latter starving in the vicinity of a well-stocked barn or stable—within striking distance of a land of plenty—seems te us a very absurd conclusion.

There are enough horses to be found dressgoes, such cases are, in this country, very rare.

There are enough horses to be found dressed up in the garb of starvation; having tight skins, prominent ribs, and a cadaverous countenance, living, yet half dead. But they know nothing of the "Famine in Egypt;" they get enough out too much of the same kind .- Dadd's Veterinary Journal. "

How Much Should a Cow say?—Cows, to give milk, require more food than most farmers imagine. J. W. Johnstone, writing from Munich to the Country Genfleman, gives an interesting report of some experiments which have been made in Baravia, from which the following is an extract : "Our trials have confirmed the view that cows, to give the greatest possible quantity of milk, must daily receive and consume one-thirtieth of their live weight in hay,

THE TRIBUNE FOR 1857.

Being requested by many to publish a statement, through the columns of your paper, of
my experience with, and the value of the Chiness Sugar Cane, I therefore send you the following statement, which you will please insert:

On the 25th of May I planted about half
an acre of ground, one year old. A portion
of the soil was low and wet in the spring—infact I covered the seel with mut; the other
part was high and snuly; the consequence
was, when the dry season set in the wet part
baked very hard, and the high burnt up for
want of rain. I plowed it when about ten
inches high, and that was all the working i
got, with the exception of a slight hoicing previous to plowing; my object was to ascertain
the amount of saccharine matter contained in
the stalks, and supposed enough would grow
to make the experiment. Many of the stalks
grew from sixteen to twenty feet high, (in the
low ground it only grew twelve feet.)

Having made a mill in which to grind it,
I commenced on the 24th of September. The
cane then had received two or three frosts,
which slightly injured the tast of the
water. I am convinced that the amount of stalks I
used can be grown on less than a quarter of an
eere. The amount of water obtained from the
piece was 270 gallons, from which I made 45
gallons, which, in flavor and beautiful bright
red color, is far superior to any molasses obtained from the South. I did not try to grain
any of it, as it will not grain after being frost
ord it it is planted by the middle of May, it will
ripen by the end of August, and remain in good
condition until frost, and if ent up and put in
a shed (in appreheusion of frost) it will keep
Well for a mouth or more.

I will give a statement of what may be made
per acre, judging from the amount of water obtained from euch stalk. One of my neighbors,
and the first province of the proposed of the

sion and misery in terms and the windication of the Divine benignity imperatively requires it. It must triumph: for Democratic America cannot always remain the scoff of aristocrats and the shame of reformers and liberals throughout the Old World. It must triumph; for Man's history is not a choos or a riddle, but everywhere instinct with meaning; and notherous effort ever failed of its effect—no drop of martyr blood, was ever shed in vain.

"Ant even if we Republicans were disposed to fold our arms in slumber our adversaries would not permit it. They are lassy to-day in lengthening their ords and strengthening their gathes with a vigilance and activity which reveals a consciousness on their part that their dominion masthe made sure forthwith or their sceptre will have forever departed. To-day, myrmidoms of the Slave Power threaten and harass Northern Mexico, are encamped in the heart of Central America and waging a war of extermination on the distracted inhabitants of its petty Relowing sixteen hills per square rood, which will make 2,560 hills to the acre; and this, at one quart per hill, will make 110 gallons of molns, see. Valued at 75 cents per gallon, it would amount 70 \$8,250 per acre, and I do not hesitate in saying that the amount may be doubled. I would urge upon the farmers of the western country to try it. Yor will not only save, but make money in the operation. I am well convinced that in 1860 the southern planter will have no sale for his sugar in the State of Illinois. From present indications there will be one hundred acres raised in Wabash count y next year, which will save the county \$10,000. The time to commence working the cane is when the seeds have changed from green to a dark red hue, although it will remain good until fairly matured.

Should any person wish to make the experiment, I have some seed to spare—one quart will plant an acre. J. M. Khron, McCleary's Bluff, Wabash county, Illinois.—Graysrille Hereld.

Horses too Well Fed.—The following marks of a skillful practitioner and close observer, are worthy of attention. Dr. Dar'd has been, however, more uniformly fortunate in the horses which have passed before his eyes, than some others. Horses are often overfed with grain, but we never knew one to cat too much hay or grass, when it was supplied regularly. They are rarely attacked with disease, when little or no grain is given them; or if given, which is likely to require two years for the way of the production of the great issue of the Amor, and there is make the experiment, I have some seed to spare—one quart will 'plant an acre. J. M. Khron, McCleary's Bluff, Wabash county, Illinois.—Graysrille Herbella.

Horses too Well Fed.—The following the marks of a skillful practitioner and close observer, are worthy of attention. Dr. Dar'd has been, however, more uniformly fortunate in the horses which have passed before his eyes, than a commendation of the great issue of the day, it sinks none of the fareal production of the great issue of the Amor, and there followed

to the mouth of the Amour, and thence homeward by the Pacitic and California, unless some change of route shall promise greater interest and profit to our readers, for whom alone he will write regularly throughout his adventurous journey, which is likely to require two years for its completion. Our reports of the most interesting Leetures, Public Meetings, &c., will be full and reliable, and our Foreign and Domestic News made up with a careful regard to the condensation into our ample columns of the greatest amount of intelligence that is consistent with the use of type of a generous size. In short, it we fail to make The Third.

If it be deemed desirable by Republicans that The Thirds are charged \$\frac{1}{2}\$ per term for loaned by such pupil, his or her parent or guardian.

EXTRAS:

French, German Spanish or Italian, each, \$\frac{1}{2}\$ when taken without other branches, \$\frac{1}{2}\$ french, German Spanish or Italian, each, \$\frac{1}{2}\$ and monished not to aid our circulation, but to arge instead that of journals deemed "sound" and "National" by the compatriots of Atchison and Stringfellow.
