Department. Harmer's

Wheat Sowing.

We hear many complaints of the total, or partial failure of the wheat crop, in various sections of the country. In some places it has been winter killed, in others smitten by rust, and in many others cut off by the insect. The truth probably is, that, excepting destruction by insects, there is about the same amount of injury received from these sources as occurs every year. The business of collecting information from the wheat-growing districts is now so systematized, that we hear much more of the failures, than we were accustomed to, ten years Whole columns of reports are published 800. in the daily newspapers, and the story of failure in fifty counties of the Union makes a great impression. Wheat has never been so certain a crop as Indian corn. It is a more captions plant in its wants, and must have more careful attention. It demands a porous soil, rich in vegetable matter, such as is found in the newly cleared lands of the West. In old lands the mechanical preparation of the soil is a matter of prime importance. The more nearly you can make it like the virgin soil the better. If it be not already dry it should be made so. The soil not already dry it should be made so. The solution is not already dry it should be made so. The solution is not underdrained it should be plowed in narrow lands, with deep dead furrows to give should be deeply stirred with a sub-soil plow to in narrow lands, with deep dead furrows to give the water a chance to pass off into them.

Sow EARLY .- The experience of wheat-growers is very uniformly in favor of early sowing. The sooner it is put in after the first of this month the better. The roots have time to get a strong hold of the soil and are not easily thrown out by the frost.

SELECT YOUR SEED .- This may be done by threshing the bundles only partially. A few strokes of the flail will knock out the plumpest kernels. Some of the fanning mills have riddles for this purpose, running the smallest kernels through, and saving the large ones for seed. Attention to this matter is of great importance if you wish to keep up the reputation of any given variety. The early red varieties, such as the pure Red Mediterranean are most reliable against insect ravages.

USE A DRILL--If you cultivate wheat in any considerable quantity. It will soon pay for itself in the saving it makes in the seed, and in the larger yield per acre. If without a drill, plow in the seed with a shallow furrow.

MANURES .- Do not be afraid of making the land too rich. Wheat will not grow where buckwheat and some other grains may yield a tolerable crop. Barn yard manures are always good and safe. Ashes, lime, plaster, and clover turned in green will each and all pay, in certain conditions of the soil. As good wheat can be grown now as ever, in the oldest part of the country, if cultivators will heed these suggestions-except where the insects happen to abound for the time being.

MULES AND HINNIES .- If we would ask the youngest farmer on our list of subscribers, What is a mule ?" he would reply at once that, he is " a hybrid or cross between the horse and the ass." And he would begin to look at our ears, as if the asking so simple a question indicated that we were akin to the last named animal. Yet it is not certain that everybody could answer our question ; and fewer still could tell us that there are two distinct animals, both the progeny of the horse and ass. one of which is, and the other is not, a male. The offspring of a male ass and a female horse is the genuine mule. The offspring of a male horse (stallion) and a female ass is a hinny. The English word hinny is derived from the French Latin verb hinnio, to neigh, which was used by the Romans to designate a point of differ-ence between the two animals, the hinny neighs between the two animals, the hinny neighs

mule, its comparative freedom from disease, and faculty of keeping in good condition on the cheapest food, we wonder that this animal is not more commonly used at the North for all kinds of farm and team-work. At the South the mule is the common drudge. The hinny is hardier than the horse, more patient, and will bear harder usage, yet is inferior in these respects to the ass and mule.

THE FOOT OF A HORSE .- The human hand has often been taken to illustrate Divine wisdom-and very well. But have you ever examined your horse's foot ! It is hardly less curious, in its way. Its parts are somewhat complicated, yet their design is simple and obvious. The hoof is not, as it appears to the earcless eye, a mere solid lump of insensible bone, fastened to the leg by a joint. It is made up of a series of thin layers, or leaves of horn, about five hundred nicely fitted to each other and forming a lining to the foot itself .-Then there are as many more layers belonging to what is called the " coffin-bone," and fitted H. A. BURBANK'S BAKERY into this. These are elastic. Take a quire of paper, and insert the leaves, one by one, into those of another quire, and you will get some idea of the arrangement of these several layers. Now, the weight of the horse rests on as many elastic springs as there are layers in his four feet-about four thousand-and all these is contrived, not only for the easy conveyance of the horse's own body, but of human bodies and whatever burdens may be laid upon him.

HINTS .- As the pastures become short and dry, your stock will betray symptoms of uneasiness. Some will pine, some will be ill-tempered, and some will become unruly. The way to remedy this is to increase the supply of food. This may be effected *undirectly* by selling off a part of your stock ; it may be effected directly by putting the animals into fresh pasture, or by feeding extra food in vegetables, grain, or meal, or by all these means combined. There will be a great amount of food for stock this fall. This may tempt many to try to keep too much stock. Be on your guard against this.

Good wheat sown never changes to cheat or tares; but "wild oats" sown in youth always does so

EXTRAS.

ence between the two animals, the hinny neighs while the mule brays. Nor is this the only difference. The general appearance of the mule is like that of the ass, while the hinny more resembles the horse; and the temper of the two is likewise different. The hinny has a smaller and better shaped head, flowing mane and tail, shorter hair, and larger frame, legs and feet than the mule. The hinny has also the voice of the horse. Considering the wonderful endurance of the mule is comparative freed un from disease

guardians may be assured that all due care will be exer-cised over the health, the manners and morals of those en-trusted to their care, and all suitable aid rendered at all times in promoting their advancement in study.
