## SWEET POTATOES AT THE NORTH

Having for many years entertained the Having for many years entertained the source independent opinion that sweet potatoes could be successfully grown at the North, I sent last way; the snow packed it down, and when spring to a person who has sumplied the source of the source o way; the snow packed it down, and when spring to a person who has supplied the for collection. the spring rains came, they held it down, hugging the sod close—a timothy sod of two years' standing. The result was that they have the two years' standing. The result was that they have the two years' standing. The result was that they have the two years' standing. The result was that they have the two years' standing. The result was that they have the two years' standing. The result was that they have the two years' standing. The result was that they have the two years' standing. The result was that they have the two years' standing. The result was that they have the two years' standing. The result was that they have the two years' standing. The result was that they have the two years' standing they have the two years' standing. The result was that they have the two years' standing the two years' standing they have the two years' they have the two years' they have the two yea the crop was remarkable. The line was been, from accident or otherwise, exposed drawn wherever the manure extended, as to wet, and consequently were so damaged though a rope had been drawn to mark the difference. There were coarser stalks, and few of the best were selected and planted, they were from ten to twelve inches taller, not one of which lived. I then sent to New and the heads the largest and plumpest I York twice, and succeeded in obtaining, at ever saw. This was two years ago when an exorbitant price, enough to plant five an exorbitant price, enough to plant five square rods of ground. From the subsequent appearance of the potatoes I think they were of the Nansemond variety. They I have seen manure thrown in heaps in quent appearance of the potatoes I think winter, and left there till spring. It proved they were of the Nansemond variety. They a damage to the crop. The manure was were planted in a light, rich roll, it being spread as soon as the frost was out of it .-- an abandoned esparagus bed. Two furrows Weeds in this case seemed to possess the were thrown together by a horse and small have everything in the line of A very fine effect—fine always, so far as which, after being raked and smoothed off, I have seen it practiced-is the application were set with the plants singly along on rather early in the fall, so that the manure the two sides of the ridge in quincunx form, catches the rains, and some of the warmth, about eighteen inches apart. This was and the grass gets a start, so as to possess during the first week in June. Very little apply too thick, so that the upper part of the manure goes, much of it, into the atmosphere; the lower the ground gets. Our friend Wieting, in order to remedy this (he had a poor yellow knoll—drift I think), applied a thin coat one year, close to the plied a thin coat one year, close to the the rains in August set in, soon covered ground and got a good crop; the next year the entire space, some of them running fif-he applied another, with still greater effect. Some weeds made their appear-A mat was formed by the first coat, and but ance above the potatoe vines late in the little manure was visible. The second coat season, and were pulled up. October 10th seemed to impart all its strength, as did the a heavy hoar frost killed the vines while seemed to impart all its strength, as did the first. We must spread rather thin and close or we have a chance to lose much of our manure. When it is harrowed in or mixed with soil, even if lightly, but thoroughly, a heavy coat no doubt will do—will do if the heavy coat no doubt will do—will do if the seven bushels were good sized potatoes and sweet, but a little heavy in cooking; in all sweet, but a little heavy in cooking; in all harrowed.

We sell to all alike. This section of GOOD WELL MADE CLOTHING, HATS & CAPS, SHIRTS, COLLARS, UNDER SHIRTS branched by they were very green. From this piece of ground I dug ten bushels of potatoes, three of which being too small for family use, were reserved for seed. The remaining seven bushels were good sized potatoes and sweet, but a little heavy in cooking; in all HATS, & COLLARS, SILK HATS, &c.,

In some parts of the drills the plants satisfy all as to quality and price.

Having the entire summer in which to Among the many desirable and beautiful patterns is the PERMANENT MANURES NOT THE MOST complete their growth, an occasional drouth will not materially injure them. R. M. Conklin.

# RAISING CALVES BY HAND-HAY FED.

A correspondent of the Germontown Telegraph gives his method of rearing calves by hand. For a week or ten days he allows the calf to take all it will from the cow. It is then introduced to the "nursing bottle," which is made after the following manner

4. Is bone-dust a permanent manure, and if both these manures are permanent, which of the two is most so?

about eighteen inches high, securely fastened at a convenient distance from the ground, To the first question the editor correctly say about the height of a cow's udder, (a replies, that from 200 lbs. to 400 lbs. is genthen took a worn-out gutta percha drill tube KDROSENE OIL, LAMPS, WICKS AND CHIMNEYS rally recommended.

In answer to the second, he says, "Care bottom of the box, leaving the tube in an should be taken to incorporate the super-phosphate with the soil, as it is so concen-trated a pattern that it another not to come and of the tube I sewed a piece of soft, trated a nature that it ought not to come into direct contact with plant roots." We thick leather; in that part to the leather which came crystate the contact with plant roots. have used superphosphate for many years, and never knew of its injuring the roots of which came opposite to the end of the tube and never knew of its injuring the roots of plants. It differs in this respect from Pernyian grane. The English farmers drill in

"The box being filled with a mixture of new and skimmed milk, the calf is brought up to the box, and after having put a breechture will never become as general as is desirable till we use superphosphate, and have is placed in its mouth; the milk of course is placed in its mouth; the milk of course As the Canadian farmers raise so many turnips, we hope that drills will be introduced, if they have not been already. They stands at the hight in the tube as it does in duced, if they have not been already. They reference betweed the artificial and natural tudes, at once begins to suck; the first effect is always a fit of coughing, for the stream and most elegant assortment of of milk is larger than he bargained for, but BOOKS, STATIONERY, MAGAZINES, PERIODICALS it soon gets over this, and drinks until sat-The next time for feeding it is taof the Canada Farmer says: "Superphosphate is a permanent manure (in a comparative sense) if really good, and its effects

as permanent as the coarse, littery, unfermented manure from which it is obtained. And yet the former is considered the most valuable. It is so in a'l cases. Hair, wool, horn, and hide contain as much nitrogen as the best Peruvian guano, but being much more permanent, are not considered half as valuable. Why is this? Why are coarse, inch bones so much cheaper than fine bone-dust? The answer is plain. The fine bone-dust decomposes more rapidly and produces a greater effect, but of course will not last as long.—If it could be ground as fine as flour it would act still quicker and produce a better result—or what is the same thing. A new the latter and the est situation for grape vines; land what is the best situation for grape vines; land which slopes to the north, south, east, or west-rought to this market; Beads, for the Ladies, or all sizes and colors: Port Monnies, Pocket Diaries for west, and what is the best manure for them?" and the editor answers:

"A southern slope is best for vineyards; but an eastern or western one will do very well. A northern slope is not suitable, except in a warm latitude. Bone-dust is the best fertilizer; but it is too expensive to be used extensively. Ashes are good, and next well-rotted barnyard manure, which is all that is needed in any case. If the soil is in good condition—a state that will produce a good crop of corn—no manure at all is needed for the first three years. Grape to the morth, south, east, or west-rough to this market; Beads, for the Ladies, or well-laids, or all sizes and colors: Port Monnies, Pocket Diaries for west-rough to this market; Beads, for the Ladies, or well-laids, or all sizes and colors: Port Monnies, Pocket Diaries for west-rough desire past, or all sizes and colors: Port Monnies, Pocket Diaries for west-rough desired past, or all sizes and colors: Port Monnies, Pocket Diaries for all sizes and colors: Port Monnies, Pocket Diaries for west-rough desired past, or all sizes and colors: Port Monnies, Pocket Diaries for west-rough desired past, or all less quantity would be needed to produce a sun shines most all of the day. It is not iven effect.

of the Canada Farmer says: "Superphosphate is a permanent manure (in a comparative sense) if really good, and its effects will be observed for many years after its application."

In reply to the fourth question, he says: "Bone-dust is a permanent manure also, but we cannot say which will last the longest. Our impression is that superphosphate will act the more quickly of the two, but whether the bone-dust will out-last it, is a point we are unable to determine."

Now the fact is that superphosphate, "if really good," is not a permanent manure. The better the superphosphate the less permanent it is. And this, strange as it may appear to some, is true of all manures—Think a moment! Why do you pay more for bone-dust than for rough bones? The latter will last twice as long as the former. What the gardners term"spif-manure,"(that the former what has a permanent as the coarse, littery, unfer
spinal for the proper temperature to feed. It is a point we want of milk, but for an experment. At first the calf showed the change, the former weeks after weaning."—Genesee Farmer.
