

**Agricultural.**  
**Handling Bees.**  
"Line upon line" has been written upon this subject yet we speak within bounds, when we assert that not one bee-keeper in ten knows anything of the practical case with which they can be controlled and brought under subjection. They are as "harmless as flies," if rightly managed. Gaping crowds attend our county and State fairs, and look upon the doings of the "bee men," as something little less than marvellous. A man with a swarm of bees in his hat, shaking them over his person, down upon the crowd—nobody stung—perchance taking them into his mouth and belching them forth, is looked upon as little less than a necromancer.  
There is no great secret in all this. Any man with a little tact, and a knowledge of some of the peculiarities of the bee, may do these things, and others still more surprising. The whole secret lays here: "A bee gorged with sweets will not sting," unless forced to it by hard usage. Their appetite is so strong for sweet, that they cannot resist the temptation to gorge themselves, when opportunity offers. The bee-keepers take advantage of this fact in making their public exhibitions. This is the wonderful "bee charm." Not that which they have bottled up to sell to the credulous public at twenty-five or fifty cents per bottle, but simply causing their bees to gorge themselves. This may be done in many ways. A little smoke will make them rush to their stores and fill their sacks. Close the hive, and by a little rapping they will do the same thing. Do anything to excite their fears and the result will be the same. Offer them sweetened water and they will partake freely. After they have filled themselves, you may run your hands among them as much as you please—if you are careful not to injure them—and they will take it all in good part. You may shake them down from their combs over your own person, or that of others, and they will not resent it. You may even tear their hives and combs all to pieces, and not have a single "sting for your pains."  
If you want a hive of bees in your hat, all you have to do is to cage the queen of the gorged swarm, in a small wire box, and fasten it in the top of your hat. Shake a few bees into the hat from one of the combs, and their love for their queen will make them cluster around the cage in the hat.  
The most convenient method that I have tried, in common management of bees in my apiary, is, when I wish to handle a hive or stock, to blow a little tobacco smoke up on them. After a moment or two, I can remove the honey board and take out the frames, without any fears of being stung. It is not necessary that a man should learn the detestable habit of smoking, in order to do this. A pipe should be so constructed that you can blow through it and direct the smoke to any part of the hive. K. P. Kidd, an apiarist, at Burlington, Vt., manufactures a cheap pipe that answers a very good purpose, in smoking bees. Let any one who has heretofore had trouble in the handling of his bees, try a little smoke, and he will be surprised at their easy management. He will find honey boxes can be removed, the bees and combs examined, with entire freedom from stings, with, perhaps, now and then an exceptional case.

**NEW FIRM. GREAT INDUCEMENTS.**  
**FELLOWS, CRANDALL & CO.,**  
Successors to Reynolds, Fellows & Co. are now offering and prepared to furnish on short notice, Wagons, Carriages and Sleighs, of all descriptions and of the latest and most approved style and of the best material, at the old stand opposite the Union House, in the center part of Old Bradford, Bradford County, Pa.  
The public are assured that the reputation the shop has acquired during the last six years under the superintendence of J. H. Fellows, will be more than maintained, as he will superintend the work as heretofore, having long been and having had much experience as a carriage and sleigh maker, and he will ensure the public that the work will be spared by the above firm to make the establishment worthy of their patronage. Thanking the public for the patronage they have so far extended, we hope to merit a continuance of the same.  
N. B.—We, the undersigned, being practical mechanics can manufacture and offer to the public at prices that will be competition.  
**JAMES H. FELLOWS,**  
D. G. CRANDALL,  
J. G. MERRITT,  
Alto, Borough, March 30, 1885.

**THE INSURANCE COMPANY OF NORTH AMERICA.**
