Agricultural.

HINTS ABOUT WORK.

for the most effective and deadly onslaughts the bottom of compost heaps in the yard for upon weeds and bushes. The nature of most weeds is in the first part of the season to make tops, and afterwards to concen trate their energies either upon the production of seed or maturing their roots, so as to live through the winter. If cut in this dry hot weather, it is usually certain death. Even Butter-and-Eggs (Liniara), that most showy and detestible of weeds, is sometimes killed by thorough-hoeing up in an August drouth. As for bushes, once cutting up, and then letting the sheep browse off the young shoots, will make an end of the worst, even wild roses, or blackberry bushes. Do not let any weeds go to seed. The season has been p rticularly favorable to crops of weeds, and without proper dilligence it will take years to do away with the harm that may be done, if they scatter their seeds.

Seed Grain .- Look out early for a good supply of clean plump seed, especially for that to be used this season. Clean it thoroughly from all shrunken kernels and weed seeds by repeated winnowing.

Buckwheat may be sowed now and make a good mass of green manure, to be plowed under in time for sowing rye, or for enrich ing the ground for spring crops, and with a chance for a crop of grain.

Timothy sowed alone will, on good soil

quickened with a top-dressing of bone, guano, or any fine rich compost, usually catch well, and sooner make a good sward than that sown with spring grain, or upon winter grain in the spring.

Wheat.—If the soil be dry in winter and

in good heart now, plow early, and giving a top-dressing of some good fine compost, or special manure, drill in the wheat. It is poor policy to risk winter wheat on soil which, from lack of draining barely allows the plants to struggle through,

Oats .- Harvest before too ripe, and thus have much better straw, more and plumper

Corn-It is a great temptation sometimes to sucker corn for the sake of getting green feed for cows. We do not believe in suckering corn at all, though with some many varieties we feel sure that the suck- dust. ers are important to secure the proper filling out of the tips of the ears, the tassels coming into flower a little later than those of the main stalks, the latter maturing tip kernels of the ear, are thus fertilized. weeds among corn, but do no hoeing after the ground is shaded.

Tobacco begins to ripen for cutting by the midde of the month, if properly topped and suckered. When about 12 to 16 leaves have formed, and the flower stalk begins from the base of each, which must be until ripe. broken off. The worming must go on all the time; and so vigorously do the suckthe time; and so vigorously do the suckers grow, and so active are the worms, that a few acres will give very steady trellises tied up. Thin out crowded brankles to this month to several hands. leaves have their full growth, and have pillar or "worm." that turgid and mature look and feel, difficult to describe, cut up at the roots in the middle of the day, turn frequently till wilt-ed enough to handle without breaking, and then hang in airy sheds.

Stacks .- If hay or grain stacks settle, re-top them, building them up square and guard against rain

Water .-- There is no more important subject than the supply of fresh and pure water for the stock in the pasture and in the yards, the lack of it cannot be made up by the best of feeding and other care. It is very bad to be obliged to drive cattle far for water. Young calves and cattle are barely wide enough to admit the fruit. Dryoften seriously stunted by a short supply ing may also be resorted to.

and calves, left to take their regular allowance of milk naturally, should be weaned grow out of reach and bear less fruit.

Dwarf Trees.—Continue to thin the about this time, say when 3 or 4 months A little pinching now and then of shoots in away from their dams, and allowed to suck shape. at first twice a day, then once a day, then less often, and finally once a week for once or twice, thus they will be weaned quietly and without falling off in flesh through running to and fro in their anxiety. Lambs must be weaned abruptly, and to make it easier for both parties, separate them be-yond the sound of each other's bleating leaving the lambs in the old pasture. Give the ewes very dry feed, and milk those whose udders appear distended and tender. Put two or three old tame ewes or weathers with the lambs as leoders, and to make

should be dried off before September, and kept in good flesh, being fed so as to be cle. Peas produce more fat than the same O.cen-Be careful not to over work and

exhaust working cattle. If put to hard labor, feed dry hay, and bright straw with bran upon it, in addition to what they pick up nights in the pasture.

Horses need careful treatment, and if and dry hay. Cold water is perhaps the best application for galls by the harness; and do not forget that for all kinds of stock Salt and Pure Water are essential to their

Swine.-Keen them making manure weeds and all sorts of rubbish which will decay, should be thrown on them to work over. Peas may be fed unthreshed, using such as may have been somewhat damaged, and thus the hogs will be in prime order when corn is fit to feed

Sheep .- Keep tar upon their noses to keep off the bot-fly, which causes grubs in the head; examine rams about the horns and heads and elsewhere for wounds, which soon become maggoty if neglected. Wash will be glad to stand on their feet. them out and apply very warm pine tar.

Poultry .- Give all kinds a share of the daily waste, butter-milk, loppered milk, etc. Collect eggs daily, keep in a cool place in close boxes, set on the points, and packed in Indian meal, bran, or slacked lime, inverting the boxes every two or ed corn, wheat screenings, Bromus grains an improvement,-Genessee Farmer. etc., with free run for green food and insects. See that fowls have clean and deep GATES SAGGING .-- My way of keeping gates

hauling. Leather scraps, woolen waste, ing on.

slaughter house offal, horn piths, hops and sprouts from the breweries, so py and oily water from the cloth factories, which may be absorbed by muck or led out upon the Bushes and Weeds.—August is a season grass. Save any choice finer manure from

Kitchen Garden.

One should not in the enjoyment of the abundant products of the garden forget to provide for next year, in the way of seeds. This is often thought of too late, and after the best of the yield has been used upon the table. We have so often insisted upon the earliest and best for seed that it is unnecessary to repeat it. Some kinds of seed are best raised by large growers, but there are many sorts that every one can as well save for himself.

Asparagus will now only need to have the coarse weeds pulled up. If seed is wanted, collect it from the best plants. Some English cultivators strip off the flowers as they appear, believing that the root will be stronger if not allowed to bear seed. Beans .- Plant some of the bush sorts for

salting. Beets.—Thin and use the hoe freely. A slowly grown beet is of poor quality.

Cabbages and Cauliflowers.—If slugs are troublesome, use lime or set traps. Caterpillars are easily disposed of when the first

hatch and before they scatter. Use the hoe frequently. Carrots.—Hoe and thin, and if young carrots are wanted, sow the Dutch Horn va-

riety.

Celery.—Earth up the early plants. Set out for latest crop. Keep that set out in flat culture free of weeds by running the cultivator between the rows—and towards the middle or end of the month commence to draw the earth up to the plants.

Corn .- Select the finest and earliest ears for seed. Destroy the worm that feeds on the silk. Cucumbers.—Gather for pickles when of

small size. Egg Plants.-Keep the fruit from the ground by putting a handful of hay or straw under it. If holes appear in the leaves, look under it.

under for caterpillars. Endive-set out plants a foot apart each way. Tie up the older ones to blanch. Herbs. - Continue to gather as they come kinds it may have no evil effects. With into flower. Dry and put out of the way of

> Lettuce.—If sown during hot weather, should have the benefit of partial shade. Melons.--Remove those set too late to ri pen. If a vine is allowed to carry only

three or four melons, the fruit will be all the larger and finer. Onions.—When a majority of the tops fall over, commence harvesting. If the onions are to be stored for winter, dry thorough-

Potatoes .-- Leave those wanted for seed

as suggested last month. Save seed of Particular as respectively. early sorts. Let the running vines root at kinds of

ches. Look out for and destroy the cater-Turnips.—Thin ruta-bagas, and sow the round sorts in places left vacant by other

early crops. Weeds.—Use the hoe rake, bayonet hoe, push hoe, or some other weeding implement. the surface, and if used often, will keep down the weeds.

Fruit Garden.

In the rapid ripenings up of small fruits allow none to go to waste. Raspberries, currants and blackberries may be preserved

Weaning young Animals.—Colts, lambs, canes at a convenient hight, else they will Blackberries .- Stop the growth of rampant

clined to push unduly, will keep the tree in Grapes.—Provide some kind of bellows COPYING DONE TO ORDER

and be prepared to use sulphur or other dusting material. Keep tied up the trellis or to stakes. Raspberries.—Select the young canes that

are to fruit next year, and give them the advantage by removing all others.

Strawberries.—Runners may be rooted in small pots and set in beds, where they will bear a moderate crop next year. Keep the runners clipped when loose culture is follow-

ed.

How to Produce Mutton.—"In the first place I secure a good breed. That is the place I secure a good breed. That is the most important point. The next thing is to keep them growing, from the time they gets at his discretion.

Cows.—Use all diligence to prevent the cows drying, giving good pasturage, extra feed if necessary, and plenty of pure water. Farrow cows to be fattened this fall, should be dried off before. Sentender, and to making mutton. Oats furnish nitrographs. making mutton. Oats furnish nitrogenous matter for the formation of necessary mus-

Spare the Woodpeckers.—"As is well known, they subsist principally upon the larvæ of the tree-beetles or bores, which they obtain he obtains the shortest notice. We have also a large variety of MOULDINGS, of the latest style and pattern, which we can furnish much cheaper than they can be worked by they obtain. kept up should have an armful or two of and branches of the trees, and thrusting in they obtain by picking holes in the trunks PLANING, their long-barbed tongues and drawing the vermin from their lurking places. Some of these woodpeckers have at times been regarded as injurious, from the fact that they are called, in some localities, sap-suckers. from the mistaken opinion that they suck the sap and eat the soft inner bark of some of the trees."

> New England Farmer says that he cured his hens from sitting by shutting there.
>
> Towarda, Feb. 8, 1864.
>
> L. B. RODGERS & CO. his hens from sitting by shutting them up in a tub having an inch or two of water on the bottom. He keeps them there during the day and puts them on the roost at night. If not cured the first day he treats them to the "water cure" another day, when they

ONIONS AND POULTRY .-- Scarcely too much can be said in praise of onions for fowls. They seem to be a preventive and remedy for various diseases to which domestic fowles are liable. For gaps and inflammathree days. In the moulting season hens tion of the throat, eyes and head, onions are cease laying. Keep chickens well fed, almost a specific. RARMERS MUTUAL FIRE INSURANCE

OF MIDDLE PENNSYLVANIA,

Office in Danville, Montour County, Penn'a.

The Farmers Mutual Fire Insurance Company of Middle Pennsylvania was incorporated by the Pennsylvania Legislature, in the year 1859, for the Mutual Insurance of Country property only, and immediately thereafter commenced its operations on that principle, which has been strictly adhered to since.

All losses have been promptly paid out of the Premiums collected on application for insurance without making any assessments.

The Insurance of Country proper y only, the low rates charged for Insurance and the prompt payment of losses are deemed a sufficient recommendation of the Farmers Mutual Fire Insurance Company of Middle Penns Ivania, to all owners of safe class country property.

Dentestry

TWENTY-FIVE YEARS EXPERIENCE
IN DENTISTRY.—J. S. SMITH, M. D., would respectfully inform the inhabitants of Bradford County that he is permanantly located in Waverly, N.Y., where he has been in the practice of his profession for the past four years. He would say that from his long and successful practice of 25 years duration, he is familiar with all the different styles of work done in any and all Dental establishments in city or country, and is better prepared than any other Dental operator in the vicinity to do work the best adapted to the many and different cases that present themselves oftentimes to the Dentist, as he understands the art of making his own artificial teeth, and has facilities for doing the same. To those requiring under sets of teeth he would call attention to his new kind of work which consists of porcelain for both plate and teeth, and forming a continuous gum. It is more durable, more natural in appearance, and much better adapted to the gum than any other kind of work. Those in need of the same are invited to call and examine specimens. Teeth filled to last for years and oftent mes for life. Chloroform, ether, and "Netrous oxide" administered with perfect safety, as over four hundred patients within the last four years can testify.

I will be in Towanda from the 15th to 30th of every month, at the office of W. K. TAYLOR, (formerly ocupied by Dr. O. H. Woodruff.) Having made arrangements with Mr. Taylor, I am prepared to do all work in the very best style, at his office. WENTY-FIVE YEARS EXPERIENCE
