The Legislature has not transacted any is cal business in which your county is con cerned—and, in fact, it has done but little to interest anybody but the members and s few politicians. Several days were spent in making speeches upon the resolution an dorsing Hon. E. M. STANTON. This Mills paper was, intended to be passed without ebate, merely as a compliment to the gentieman named, but the Democratic members could not permit this to be done. Denunciations of Mr. STANTON, of the most bitter character, were indulged in by the eading copperheads, thus provoking a pro- Sedgwick in bronze. to be erected at West tracted debate. If, as is alleged, the actual Point. services of the Legislature cost the State a thousand dollars per hour, the copperheads are entirely responsible for the many thousands the treasury will have to pay for the time occupied in discussing the Stanton resolution. When the cry is raised during the money, let it be fairly known by the people that the Copperheed Senators and Repre sentatives were the cause of it incomp as they provoked lengthy discussions when sary, and endeavored to prevent legislation of any description looking to a beas corpus, and threatening legal process saving of the State's funds, for the sole against said inspectors if the prisoners are purpose of bringing the present Legisla discharged. Family .. Sewina ... Machines.

They are more easily understood and used, and less liable to derangement; then other machines.

They are capable of executing perfectly, without change of adjustment, a much greater variety of work than other machines.

The stitch made by these machines is much more firm, at stic, and durable, especially upon articles which require to be washed and ironed, than any other stitch.

This stitch, owing to the manner in which the under thread is unwrought, is much the most plump and beautiful in use, and retains this plumpness and beauty, even upon articles frequently washed and ironed, until they are worn out.

The structure of the seam is, such, that, they it he out or broken at intervalle of only a few stitches, it will neither open, run, nor ravel, but remains firm and durable.

Unities other machines, these fasten both ende of the seam by their own operation.

With these machines, while silk is used upon the right of face ide of the seam, cotton may be used upon the other side of the seam. This can be done on no other machine, and is a great saving upon all articles stitched or made up with silk.

These machines, in addition to their superior serie as instruments for sewing, execute sest beautiful and permanent embroidery reamental work.
