his reckless and prodigal behavior,

room, where a man with a long hand-

does him more harm than good, will wage the savagest war he can against the servied columns of imled shovel feeds it under the stamps, migration that already press him The ten stamps are simply upright heavily from two sides. If he could iron hammers, weighing 650 pounds but be persuaded to save his surplus earnings. he could be a himself, by the time the six-dollar ore into a dust as fine as flour. The laborer is deposed ; and, in that case, dust cannot escape from the stamps until it flies through sieves in a pow- no one would be a stouter champion der so minute as to be almost impal. than himself for "two dollars a day pable to the touch. A ton of ore can and find your own rice." The air in Silver Canon is delici na be sufficiently crushed in two and Its temperature is several degrees The next step is to "roast" your cooler than the valley where Hyko fine powder, (or "putp," as it is call. City is built, and the mosquito abideth ed,) in order to burn up all the base not here. "Why didn't they build metal in it except silver, gold, and the town here?" you ask, "and the and so long as he was his master it was all right. But the elephant had copper. The "roasters" are ordinary mill, too, for then the wood and ore ovens, like those used for baking need not be transported ten miles." bread, except that the flames are ad. The answer is monosyllabic-"Wagot the best of him on this occasion, and would hever forget it; and mitted to the chamber where the ter." Silver Canon has neither spring, though he might submit himself tempulverized ore is deposited. Work- well, pool, not even an occasional porarily to him, he would be liable to men, called "roasters" also, (paid six dew. A mill demands abundance of to turn upon him again at any modollars a day) stir the dust with water, and so does Hyko or any othment. In short, if he took him in long handled shovels, keeping up a cr city. All the water that Silver cherry-red heat. Each of the five Canon consumes is brought up by charge again, the animal would be almost certain to kill him, sooner or furnaces has a capacity for half a ton wagon and pack-mule, and sells at later, and he would run no such risk. of dust, and the time consumed in ten cents a gallon. If, in the course He said a new keeper, however, would roasting the pulp is six hours. It is of opening the mines, an adequate have no such disadvantages to convery hard work, and to some extent supply of water is reached, I ancy tend against, and once subdued, the rendered unwholesome by the vapor that the City of Hyko, mills and all elephant might go on for years with-out giving any further trouble. of antimony and other noxious fumes. will come tumbling up to Silver Uan-Your dust, when thoroughly roasted. on for reconstruction and rehabita-Finding that Harkness was detercontains nothing but gold, silver, and tion. Then, instead of a hot little mined in his purpose, we went on copper, in powdered quartz. The valley town, Hyko will be one of the without him, and soon came in sight other metals have been destroyed __ pleasantest; cleanest, coolest and of the huge brute, who stood in the their destruction having been effect. most mosquiteless mountain cities field, a short distance from the road, ed by fire and large quantities of salt in the world, deserving to be a water-The roasted dust is raked out on polis. Nearly thirty choice men are now the opposite side of the furnace and conveyed into the amalgamating employed in the shafts and tunnels of the Hyko mines. They get to work water, where it is further ground by by climbing a mountain eight huna sort of iron fan-wheel, and where dred feet high. Just think of openfive pounds of quicksilver are thrown | ing a day's labor in Cincinnati with in for every pound of silver you estimate your-ore to contain. Quick highest steeples. These miners persilver will take up one-fifth in its spire, but they gain in girth of langs own weight of precious metals.- what they, lose in fat. I will not The union made, the amalgam of the undertake to describe the network of The union made, the amalgam of the two metals sink to the bottom of the tub, and the quartz powder runs off in a muddy rill from an orifice above. Next the amalgam is taken from the bottom of the tubs and strained through canvas bags, in order to rid it of any superfluous quicksilver. The amalgam, after this straining, is silver. It looks and feels like a sil-very sort of wet, while sand. The very sort of wet, white sand. The results, but not to morrow. The mine that is worth a million to day, by the amalgam is now ready for the "amalsimple decrease in the cost of operagamator," the most important artizan about the mill, and the one who gen-ting it, will be worth two milliona erally has charge of both mill and five years hence. There's a handsome pitched upon me to fill it. Indeed, I was about to advance on the enemy workmen. He places the amalgam profit on my money. We cannot in a furnace of his dwn, and builds now profitably work ore worth less a fire hot enough to send the quick-silver off in a vapor, leaving a resi-process wastes all the metals except single-handed, when I was checked and informed that it would be time enough for me to assume authority the precious ones and a little copper duum of silver. The flying vapor is the precious ones and a little coppe condensed in water and returned to that can't be conveniently destroyed subdued. I afterward learned that an eleits original form of quicksilver, ready In Germany large profits are made to be used again, having lost but one by working seven-dollar mineral, and In Germany large profits are made by working seven-dollar mineral, and asving every grain of all the metals in their ore. Silver mining on this continent in its infancy, and we are all trying to make a man of our trying to the our all trying to make a man of the our trying to the our trying to the our trying to the our trying to the our trying tour trying to the our trying to the our trying to the our trying to per cent of its bulk. The silver left saving every grain of all the metals in the retort looks like rusty chips of in their ore. Silver, mining on this in the retort looks like rusty chips of ragged metal; and is anything but continent in its infancy, and we are precious in appearance.

eter for assistance. As he passed the lane old Tippo sallied out after him; but Milus had fast trotters harnessed in his buggy, and managed to keep well ahead, cantioning everybody he met or overtook to clear the road, and give the elephant a wide berth. After following Mr. Milus two

y discontinued the attack, and I at once loosened his fastenings and set other was related, we heard none of him free. After a few hurried instructions from Mr. Milus, I started the elephant toward the town, having been furnished with the hook and bis righteous judgment, and we must spear used for directing the animal's movements, and he obeyed me as readily as if he had have a spear as the obeyed me as
