

Agricultural.

WHAT IS HIGH FARMING?

It is a system of tillage and farm management that is self-sustaining, a system that takes nothing but the bare land, the domestic animals, the farm implements and machinery, and cultivates the soil, maintains the family and the animals, pays the annual taxes, defrays the expenses incident to the improvements that must be made on the farms, cancels the annual interest on the money invested in the land, eventually pays for the land, all from the products of the soil cultivated; and after one, two or three decades of years, leaves every acre in a far better state of fertility than the soil was at the beginning. This is high farming. There are untold numbers of quiet, unobtrusive tillers of the soil in many of our States, who have commenced precisely as we have indicated, without one dollar of cash capital, who have had to become whatever besides the natural resources of their cultivated fields, and who have by hard work and judicious management sustained their families, paid for their land, created all their buildings, and for all their valuable improvements, and at the same time, have brought their land up to that state of productivity by their judicious management, that every acre now yields from two to three tons of hay which only one acre was originally capable of yielding. Heretofore nearly two bushels, - in many instances more than two, - of cereal grain, where the product was but one bushel. That is high farming. Yet such a system of husbandry is usually secured at simply because the proprietor knew how to save his money to defray the expenses of improvements, rather than spend three times more than he made. - *New York Observer.*

CLEANING SOLID MARBLE SLABS.

Much annoyance has been experienced by the owners of marble table-tops or other marble objects, and a perfectly satisfactory method of removing such stains is still a desideratum. It is said that if slacked lime be mixed with a strong solution of soap into a pasty mass and spread over the spot in question, and allowed to remain for twenty-four to thirty hours, then carefully washed off with soap and water, the stain will be almost entirely removed, especially if the application be repeated once or twice. Another preparation consists in mixing an oxgall with a quart of a pound of soap-boiler's lye, and an eighth of a pound of oil of turpentine, and adding enough sulphuric acid to form a paste, which is then to be placed upon the marble for a time, and afterward scraped off; the application to be repeated until the marble is perfectly clean. It is quite possible, however, that all our restorers a faint trace of the stains may be left; but it is said that this will be almost imperceptible. Should the spots be produced by oil, these are to be treated with kerosene, and for the purpose of softening the hardened oil, and the above-mentioned applications may be made subsequently. Ink spots may be removed by first washing with pure water, and then with weak solution of oxalic acid. Subsequent polishing, however, will be necessary, as the lustre of the stone may become dimmed. This can be best secured by very finely powdered soft white marble, applied with linen cloth, first dipped in water and then into the powder. If the place be subsequently rubbed with a dry cloth the lustre will be removed.

GEORGE WHEELS.

Many a wheel is ruined by oiling too plentifully. A well-oiled wheel will continue to run for ten or twenty years if care is taken to use the right kind and proper amount of oil; but if this latter is not tended to the wheel will be used up in five or six years, or perhaps sooner. Lard should never be used on a wagon, for it will penetrate the hub, and work its way out around the tenons of the spokes, and spoil the wheel. Castor oil is a good material to use on an iron axle; just oil enough should be applied to enable it to revolve in a light coating; this is better than more, for the surplus put on will work out at the ends, and be forced by the shoulders and not into the hub around the outside of the boxes. To clean the axle first wipe the spindle clean with a cloth wet with turpentine, if it won't wipe without it. On a buggy or carriage, wipe and clean off the back and front ends of the tenons, and then apply a very small quantity of castor oil, or some especially prepared indicator near the shoulders and point. - *Practical Journal of Chemistry.*

NESTING OF HENS A HIX WILL LAY.

It has been ascertained that the maximum of a few eggs composed of 100 cells or eggs, (theoretically) laying the whole of eggs, which, if the natural course, are distributed (become) nine years in the following proportion:

First year	15 to 20
Second year	18 to 22
Third year	20 to 25
Fourth year	22 to 28
Fifth year	25 to 30
Sixth year	28 to 35
Seventh year	30 to 40
Eighth year	35 to 45
Ninth year	40 to 50

It follows that it would not be profitable to keep hens after their fourth year, at their present value, and not pay for their keep, except when they are a valuable and scarce breed. - *Exchange.*

KUMING APPLIES.

A correspondent asks us how he can keep his winter apples until late in spring, say to the end of May; there is but one answer to make; that is, the apples must be good keepers, free from bruises or blemish. 2d, they must be spread out on shelves or packed in barrels, and kept in an atmosphere of from forty to fifty degrees, better from forty to forty-five. (This is at a temperature as equal as possible. Some cellars are just the thing, and preserve them beautifully. Others are too moist. Where this is the case a few bushes of stone lime should be used. - *Generalists Telegraph.*

A MARBLE HEAR FOR THE GARDEN.

Should be formed in the fall so as to have a supply of fine well composed fertilizer next year. Nothing is better to put into the compost than sod, leaves, and wood mould; add stable manure, plaster, then manure and then from the pig pen. Mix the ingredients thoroughly and shelter them from storms. You will find that such a compost a good thing for next year.

If you want your neighbors to "know about it," give a party and don't let the folks who do not party and don't

Manufactories.

FOUNDRY AND MACHINE SHOP.

The undersigned having purchased the Foundry and Machine Shop lately owned by John C. Adams and is prepared to do all kinds of work pertaining to their business, with promptness and dispatch.

MILL GEARINGS.

CIRCULAR SAW MILLS.

MAN DRILLS.

And all kinds of

MILL IRONS

MADE TO ORDER.

ENGINES REPAIRED.

And all work warranted to give satisfaction.

SHINGLE MACHINES.

Of the latest and most improved make manufactured and kept constantly on hand ready for use.

PLOUGHS.

IRON AND WOODEN BEAMS OF ALL KINDS.

CULTIVATORS, CORN PLOUGHS AND PLOUGH POINTS

Of all kinds, and the latest improvements kept constantly on hand.

CHURN POWERS,

LARGE AND SMALL SIZES.

STOVE CASTINGS

CELLAR GRATES.

SLED AND SLEIGH SHOES.

LARGE IRON RIVETTES

And all kinds of castings furnished at March 20, 1870. MERRILL & ROCKWELL.

NEW CARRIAGE FACTORY!

On Pine, between Main and Second Streets, back of O. P. Main & Co.'s Bank.

TOWANDA, PENNA.

HENRY STULEN & CO.,

Respectfully announce to his friends and patrons, that he has built a

NEW BRICK CARRIAGE FACTORY,

where they will constantly keep on hand a full assortment of

FAMILY CARRIAGES,

TOP AND OPEN BUGGIES,

PLATFORM WAGONS,

TROTTERS, SLEDS, AND SKELETONS.

Made of the best material and finished in the best city style. His long experience in city Carriage Factories gives them a decided advantage over others in the State.

Finish, Style and Durability of his Wagons. All they make is an

INSPECTION OF HIS WORK

previous to purchasing elsewhere.

ALL WORK WARRANTED TO GIVE PERFECT SATISFACTION.

Thankful for the liberal patronage formerly extended and still respectfully asks a continuation of the same.

REPAIRING PROMPTLY ATTENDED TO

at reduced prices.

Towanda, May 24, 1870. - H. C. CLARK.

THE OLD MAIN STREET

Carriage Factory.

JAMES BRYANT

Still continues the manufacture of CARRIAGES AND WAGONS, Of every description, at the old stand of G. H. Drake.

MAIN STREET, TOWANDA, PA.

His work is all of the

LATEST STYLE AND FINISH.

In the manufacture of wagons nothing is used but the

BEST STEEL AXLES,

Together with the

COMPOSITION BOXES

In light work.

PLATFORM SPRING WAGONS

AND

CLAMBER WAGONS

Best constantly on hand.

PHILADELPHIA OPTIC INSTITUTE,

For the manufacturing of the CONCAVE CROWN, CRISTAL LENSES, LONDON SMOKE and STIKED GLASS FOR WINKS OR REFRACED GLASS.

The Concave Crown Crystal Spectacles, made by the above Institute are long known to be the best in the world, and are the only ones that are not injured by the sun's rays, and therefore the great complaint of poor and weak eyes, which they are superior to any other spectacles in the market.

The Concave Crown Spectacles, (usually imported) do not matter how long the frames, contain but a poor and worthless article of glass, generally cast or pressed; they are made to be sold only, without any calculation respecting benefit to the eye, and therefore the great complaint of poor and weak eyes, which they are superior to any other spectacles in the market.

The Concave Crown Spectacles, (usually imported) do not matter how long the frames, contain but a poor and worthless article of glass, generally cast or pressed; they are made to be sold only, without any calculation respecting benefit to the eye, and therefore the great complaint of poor and weak eyes, which they are superior to any other spectacles in the market.

They are made especially well by day or candle light without firing or heating the eyes.
