Agricultural.

Prejudice Against New Things.

Whenever any new idea is proposed most of us see only the disadvantages, and generally condemn on the strength of the dark side. Many a good thing has been condemned by sensible men, and men too who are honest in their judgment, chiefly because of this tendency of the human mind to criticise rather than to investigate without prejudice. With workmen accustomed to certain tools, the prejudice is very difficult to be overcome; and yet perhaps no more difficult than it is for the man of science to abandon long and favored ideas for new views which conflict with his old-time friends. In the line of agricultural implements, most new things have to run counter to this tendency to antagonize with everything except the old. We have seen, times and again, excellent inventions thrown aside as so much rubbish, simply because workmen could not be found to favor them.

Most persons have heard of the result of the efforts of the English statesman, Sir Robert Peel, to introduce light iron plows instead of the cumbersome things in use at that time. He had a large number of tenants on his extensive estates, and he offered to give to every one an improved plow who would use it. Most of them took it, but with much the feeling that most people have when they recall the saying, that "it is not fair to look a gift horse in the month." The following season Sir R. took a trip among his friends, and found his iron plows thrown away and rusting in old nooks and corners, and to his inquiries was answered. "We be all of the opinion that the iron plows be bad things. They breeds weeds." The plows went deeper than the old ones, and the seeds of the weeds, buried deep for many years, and thus retaining vitality, of course grew when brought near the air at the surface. They saw the weeds; but they did not notice the heavier grain from the increased depth of soil, nor the greater ease and time saved in the plowing.

Just now there is a story going the rounds of the papers, which may or may not be true, but it illustrates very well what we are saying. A farmer of the good old school could see no merit in new inventions, but the boys thought they could, and once in a while they gained their point, though not without venerable opposition. But at last retribution on the young men came. The story is thus told: "The friction of a threshing machine burned a barn recently at Sharon Springs, N. Y. 'Thar,' said the farmer to his progressive sons, as he watched the fiery straws floating over his head, 'thar, boys, that's all on 'count of them 'ar new-fangled contrivances! It wouldn't a happened if we'd used flails!"

A few years ago there was an introduction of hand cultivators for garden work. They were made for drawing behind one, and worked very easily. But one dragging something behind cannot see what is being done, and the plants get hoed out. This is an evil. Then, to avoid this, cultivators were made to push ahead of one; but in this case the teeth are pressed into the ground, and the work was found too great for one man. Some one then introduced a light wheel in front, by which the teeth were prevented from entering deeply, and this machine was just what was wanted. But all attempts to introduce the machine have been unsuccessful, because it is impossible to get laborers to get out of the old idea that there is nothing like the hand hoe.

The lesson we desire to teach is not to condemn new ideas without a fair trial.—Many a thing will be found worthless; but for all that one will almost always learn something from an unprejudiced examination.

Temperature in Cheese Making.

The following is the formula of Geo. W. Davis, fancy cheese maker, and is given as the result of several years' experience:

The night's milk is placed in the vats, cold water having run around the same for some time to cool the tin and boxes; the agitators are set to work and when the milk is brought to 80 degrees a portion of the water is turned off; the agitators remain at work all night; the morning milk being added the heat is raised to 82 degrees when the rennet is added in sufficient quantities to coagulate the milk in 20 minutes; in about one hour it is cut one way with the knife and left till the whey makes its appearance when it is cross cut with the horizontal knife; then the heat is applied and as, soon as the bottom of the vat is warm, we commence working with the hands which is continued till the heat reaches 87 degrees, it is then stirred at intervals and left till there is a slight acid, then the whey is run off and the curd dipped in the sink where it is left until the whey has mostly run off, then it is turned over with the hands.

When the acid is sufficiently developed to be determined by taste or a hot iron, we salt it according to the condition of the curd, using from 2 1-4 to 2 3-4 pounds in summer and less in spring, according to the curd, per thousand pounds of milk.

Work the salt in with the hands and let the curd remain a short time to cool; in hot weather from 16 to 20 minutes, if it does not interfere with the next vat; then put to press.

This is considered an improvement on former practice, being a process half way between the Chedder and American methods, and results in turning out a product with as good success as either if not better.

CANDY STRAWBERRIES. — "Daisy Eyebright" in the *Country Gentleman*, gives the following directions for caning strawberries:

At the commencement of the strawberry season make two or three quarts of white sugar into a thick syrup by dissolving in hot water, two large cupfulls to a quart. Boil and skim this, and put into a jug or bottles for future use. Put your ripe, fresh strawberries into glass cans, and fill up with the cold syrup nearly to the brim, as the strawberries shrink somewhat. Place in a kettle of cold water, putting the lids on the tops of the cans first, but not screwing them down. Let them come to a boil slowly; boil for five minutes, then screw down the covers tightly, and set away in a dark, cool place.

A MOURNFUL story is told by a Maine editor: "The winds of autumn will soon whistle shrilly; the goose flies southward; the air speaks of snow and ice: everything betokens that in a few weeks circuses and snake shows will be no more!"

Miscellaneous.

MRS. WOODRUFF,

Having decided to go out of the business, offers her entire stock of

HATS,

PLANING, RESAWING, &c.

BILL LUMBER SAWED TO ORDER.

SEASONED WHITE PINE AND PITCH PIN BOARDS, FLOORING, SIDING,

And a variety of Hemlock Boards for sale.

We have now in operation a new, heavy, six-roll Planer, and other machinery, combining all the recent improvements, and of the most superb workmanship. Running by a never-failing water-power, we are able to do work as soon as it is presented—do it cheaply, and bestow all the care necessary for doing it perfectly. Roll in the work and orders; we will satisfy every man as to prices and workmanship.

H. B. INGHAM.

Camptown: April 7, 1873.-1y

HOW IS THIS FOR LOW!

We offer DRESSED LUMBER at the following rates:

Hemlock Flooring, (choice)		$18 per M.
White Pine	" "	26 "
Pitch	" "	23 "
Siding	" "	$15 to 18 "

Pickets from $2 to $4 per hundred.

PLANING, MATCHING, RE-SAWING, &c.,

Done at a moment's notice and by the best machinery now made. We have on hand

ONE HUNDRED THOUSAND FEET DRY LUMBER

We have in the Mill Pond

THREE HUNDRED AND FIFTY THOUSAND FEET OF LUMBER

And are constantly Manufacturing.

☞ Parties who can reach us are foolish to go near the railroad for Lumber, as under any circumstances we can SELL IT CHEAPER—at least the cost of transportation from here to the railroads—say $2 to $3 per thousand.

H. B. INGHAM.
June 26, '73. Camptown.

SUSQUEHANNA
COLLEGIATE
INSTITUTE

The Spring term of this institution will commence MONDAY, APRIL 6, 1874.

No pains will be spared to maintain the high standing of the institution, and by carefully looking to the interests of each individual student to make its work even more efficient. Each teacher will have his speciality, and use every facility to make the topics interesting, and to secure the largest possible results in his department.

Classes will be organized in several new studies in Science and Language. Also the classes in English will be remodeled so as to meet the wants of new students desiring to pursue these branches.

To save expense, text books, the same as in the county will be used in the English branches, with the exception of Geography.

To make the sojourn of non-resident students more pleasant, the Principal will use his house—situated but a few rods from the Institute building—for boarding purposes, where rooms furnished throughout and provided with clothes closets and other conveniences will be furnished for the young ladies.

The best rooms in the Institute will be furnished and assigned to the young men; all will board at the house of the Principal. There will be a careful supervision on the part of the Principal and teachers of the manner in which students employ their time.

Price for furnished room and board, including fuel, lights, and washing not to exceed six pieces, $4 00 per week. Students will furnish their own toilet and be held accountable for the furniture in their rooms.

Those desiring to prepare themselves for the work of teaching during the following Summer, should apply to the Principal at once.

Tuition from Four to Ten Dollars per term, according to studies pursued.

For further particulars or circulars, address the Principal, E. E. QUINLAN, Towanda Pa.

APPLETONS' AMERICAN CYCLOPÆDIA.
NEW REVISED EDITION.

Entirely rewritten by the ablest writers on every subject. Printed from new type, and illustrated with Several Thousand engravings and Maps.

The work originally published under the title of THE NEW AMERICAN CYCLOPÆDIA, was completed in 1863, since which time the wide circulation which it has attained in all parts of the United States, and the signal developments which have taken place in every branch of science, literature and art, have induced the editors and publishers to submit it to an exact and thorough revision, and to issue a new edition entitled THE AMERICAN CYCLOPÆDIA.

Within the last ten years the progress of discovery in every department of knowledge, has made a new work of reference an imperative want.

The movement of political affairs has kept pace with the discoveries of science, and their fruitful application to the industrial and useful arts and the convenience and refinement of social life. Great wars and consequent revolutions have occurred, involving national changes of peculiar moment. The civil war of our own country, which was at its height when the last volume of the old work appeared, has happily been ended, and a new course of commercial and industrial activity has been commenced.

Large accessions to our geographical knowledge have been made by the indefatigable explorers of Africa.

The great political revolutions of the last decade, with the natural result of the lapse of time, have brought into public view a multitude of new men, whose names are in every one's mouth, and of whose lives every one is curious to know the particulars. Great battles have been fought and important stages maintained, of which the details are as yet preserved only in the newspapers or in the transient publications of the day, but which ought now to take their place in permanent and authentic history.

In preparing the present edition for the press, it has accordingly been the aim of the editors to bring down the information to the latest possible dates, and to furnish an accurate account of the most recent discoveries in science, of every fresh production in literature, and of the newest inventions in the practical arts, as well as to give a succinct and original record of the progress of political and historical events.

The work has been begun after long and careful preliminary labor, and with the most ample resources for carrying it on to a successful termination.

None of the original stereotype plates have been used, but every page has been printed on new type, forming in fact a new Cyclopædia, with the same plan and compass as its predecessor, but with a far greater pecuniary expenditure, and with such improvements in its composition as have been suggested by longer experience and enlarged knowledge.

The illustrations which are introduced for the first time in the present edition, have been added, not for the sake of pictorial effect, but to give greater lucidity and force to the explanations in the text. They embrace all branches of science and of natural history, and depict the most fashions and remarkable features of scenery, architecture and art, as well as the various processes of mechanics; and manufactures. Although intended for instruction rather than embellishment, no pains have been spared to insure their artistic excellence; the cost of their execution is enormous, and it is believed they will find a welcome reception as an admirable feature of the Cyclopædia, and worthy of its high character.

This work is sold to Subscribers only, payable on delivery of each volume. It will be completed in sixteen large octavo volumes, each containing about 800 pages, fully illustrated, with several thousand Wood Engravings, and with numerous colored Lithographic Maps.

PRICE AND STYLE OF BINDING.

In extra Cloth, per vol.,	$ 5.00
In Library Leather, per vol.,	6.00
In Half Turkey Morocco, per vol.,	7.00
In Half Russia, extra gilt, per vol.,	8.00

SAYRE.—THE NEW TOWN OF SAYRE, PA., is situated on the Susquehanna River, between Waverly, N. Y., and Athens, Pa., 93 miles from the Anthracite, 49 miles from the Southern, and 33 miles from the Semi-Bituminous Coal Mines of Pennsylvania. It is the Southern terminus of the Southern Central Railroad, also of the Ithaca & Athens Railroad, and is virtually the Northern terminus of the Lehigh Valley and Pa. & N. Y. Railroads. It is a mile and a quarter from the Erie Railway at Waverly.

SAYRE has already in successful operation a large Car Wheel Foundry, a Furniture Factory, a Flouring Mill, a Woolen Mill, and a Planing Mill. A vigorous growth is anticipated for 1874.

THE TOWN PLOT

Is now ready for examination. Lots for residences and business places for sale on reasonable terms. The favorable location makes it a

DESIRABLE POINT FOR MANUFACTURERS,

and especial inducements are offered.

Apply at the First National Bank, of Waverly, or at the Office in Sayre, Pa.

MEDICINES.

All articles warranted as represented. Persons at a distance can receive their orders by stage or mail, which will receive prompt and careful attention.

Medical advice given gratuitously at the office, charging only for medicine.

☞ Thankful for past liberal patronage, would respectfully announce to their friends and the public, that no pains shall be spared to satisfy, and merit the continuation of their confidence and patronage.

☞ Open Sundays for prescriptions from 9 to 10 a.m., and 12 m. to 1, and 5 to 6 p.m.

April 1, 1872.—yr. H. C. PORTER & SON.

THE MILD POWER CURES!

HUMPHREYS'

HOMEOPATHIC SPECIFICS

Have proved, from the most ample experience, an entire success. Simple, prompt, efficient and reliable. They are the only medicine perfectly adapted to popular use—so simple that mistakes cannot be made in using them; so harmless as to be free from danger; and so efficient as to be always reliable. They have the highest commendation from all, and will always render satisfaction.
