Our failures is to the large small failure. However Present Property from I to 10, with the pest. In addition to the out in the own forms. Our failures is to the large small failure. However Present Pres History and Description of the Colorado Beetle.

The irruption from the West and South-west of the potato scourge. the famous "Colorado heetle," has picking, which was at one time fadrawn fresh attention to the nature vored, has now been abandoned as of the pest and the best means of de- being aloxer and more expensive. stroying it. Although discovered as early as 1820, this species of beetle to the country by the ravages of the has almost entirely attained its celel- bertle have been made, all of which rity within the past few years. Three unite in placing the decrease in proyears ago the outskirts of the migin- duction alone at \$8,000,000, and this York. Meantime the great States therities state the total loss as rathissippi and its confinent streams have by many it is thought to exceed even for years been suffering from the \$12,000,000. One of the worst feapresence of the evil. As long ago as tures of the present visitation is that 1367 the potato crops of Illinois and the Colorado beetle is noted for its several other Western States were permanency, and rarely ahandons lo-largely depleted by the rayages of calities until it has ravaged them for the Colorado bug, and even now these several seasons in succession. In States have hardly recovered from portions of Illinois, where it made the reign of the pestilence. In the its first appearance in 1867, the farm-Fall of last year the vanguard of the ers are still suffering from its presbeetles had reached the Atlantic in ence, with every prospect of a contile neighborhood of Long Island tinuance of the evil for several years. Sound in such numbers as to the Under such circumstances, the only thrown up on the beach in great de- resource is to commence an aggresposits. At present the State which sive war upon the beetles while they is most threatened with a visitation are still comparatively few, and thus man." It belongs to the Oproposite dark lines, which distinguish the and other leaf-eating beetles, its head found on shipboard. and throat are colored a righ brown. cept when the insect is in flight which the scourge has as yet only

or more upon the lower surface of the leaves. Within a week the entire broad are hatched, the larve, on Educational Department Let us remember we are dealing with immortal souls, that will meet us in the day maturity, disappearing into the ground, where they change to pupie, Within a week the entire brood have J.C. CRAWFORD, G. W. RYAN, paired, and in seven days more the female of the second generation has begun to deposit a third brood. Altogether, the different changes through which the insect goes occupy about a month and a thalf, or from forty to fifty days. For food the beetle-depends principally upon the potato, but is not at all adverse to omatoes and other choice esculents in their season. In some sections he is reported to have developed a voracious appetite for the egg-plant, but in general the potato fills th main place in his bill of fare. Besides the genuine Colorado

the there are several other species of like appearance and similar habits. which have frequently been mistaken for the true "spearman." One these is what is known as the false potato bug, the Doryphora disjuncta, which has only eight stripes, and the larvae of which are provided with girls. only one row of dots down the side, while those of its Western congener have two. This variety has long occommon acquaintance of the New England farmer. As a rule it rarely ing egg-plant, horse-nettle, &c. Then there is the potato fly of the Eastern ago was regarded as the cause of the potato rot, and which, at one time lid great damage in the Middle and Eastern States. In addition to the foregoing are the potato beetle Baradidus tringtatus, so called from its having three black dots on the back, and which was discovered near Germintown, Pa., in 1849; the three lined leaf beetle, the Crimmeris trili neata of Oliver, and several other less distinct varieties. To the Colorade species, however, belongs the leader ship as to destructive agents, the oth-

water and other mild agents have only temporary success. The only remedy which seems to stand the test of time, and to prove effectual under all circumstances, is Paris legreen in a solution of one part of the poison to six of water. In Michigan Illinois, Minnesota and other West orn States, where the farmers have hall to contend with the thickest of the scourge; this receipt has been found to be invaluable. Care should be taken in the selection of the poi son, only the best and strongest be sufficiently early that the crop may experience no ultimate harm. Caution is indispensable in the application of the mixture, Paris green being one of the deadliest of the chem icals, and liable, on exposure, to com municate the virus to the operator For this reason it is customary when watering the plants to protect the hands with thick cotton gloves, and to avoid tasting or inhaling the solu tion in any way. Nor is the beetle itself without poisonous qualities In Sullivan Co., Pa., a farmer was seized with violent convulsions from having carelessly inhaled the fumes of boiling water which had been poured upon the insects. In another work and which is perfectly sinless and teacher has of the laws which govern man part of the same State a farmer named Tyler, while picking farving from his vines, was poisoned by a chew of tobacco which he took during the operation, the noxious matter having evidently been communicated to the tobacco from his hands. Variety ... Routine in Teaching. Any one who has atall watched the opcrations of children, or who has not lost all recollection of his own youthful days, will bear witness to the truth of the affirmation, that there is nothing so acceptable to the young heart as variety. During the past few weeks, the most careless observer cannot fail to have noticed how the kite followed the marble, only to give place to the ball, and these in their turn have been suspended by other games on the part of the boys; how, also, the jumping rope has consigned to temporary ob-

livion the rolling hoop on the part of And so the plays will go on the year round, now one claiming the children's attention and now another, so there will cupied an Eastern habitat, and is a be a constant variety and change. The girls will probably display less of this bered by teachers than that given in restless desire for something new than attacks the potato, its. chief food be- the boys. But even they will be found to have their own way of expressing this trait of human nature. Their dolls will States, which fifteen or twenty years be arrayed each suggesting day in different style of wardrobe, and their playhouses present many phrases of architecture. In short, the constant and unflagging aim of "Young America," seems

> Nor does this desire for change cease with the days of childhood. It is felt all the way along through life, until age makes feeble the powers, or the rapidly approaching realities of eternity engage by their nearness the undivided attention of the soul.

either to tell or hear something new.

The young man seeks variety according ers named being all of minor impor- to his early training, or the natural bent tance, and of comparatively local of his mind, in different kinds of business or study, or pociety, in travel or amuse-Much has been said and wriften ment, or when he is not strongly held by always at me.' DRAIRIE LAND

If by infusing more variety in school conduct and feaching, we are able to rencareful study. We should be heartily ashamed of all commonplace and careless instruction, and strive by laying hold of all available helps to prepare ourselves for the great task we have undertaken.

nortal souls, that will meet us in the day of final and faithful reckoning. Let us also rememder that the eye of God himself is upon us, either in approbation or condemnation of our course, and may we all be so diligent that when the labor is past we shall hear the joy-giving "welldone," pronounced by our approving Mas-MARIAN G. ACKLEY,

Doubtless many of our teachers omit o contribute anything for the "Educaional Department," thinking they have nothing new to present or that something rare or remarkable must be given. Let us make our department, in a great measure, a school, until some more interesting matter comes to hand. Since the papers n most of their articles present matter of educational interest to the general public, let us devote much of our space to special preparation of teachers for their vork in the school-room. Lessons on primary teaching, on methods of analysis of more aavanced subjects required in our common schools may be given, and prove of value to those expecting to become teachers, as well as to experienced teachers for comparisons and criticisms. what is presented in the columns of a newspaper will be more readily remem-

books. Let actual lessons on primary or adranced teaching be given, showing just low and what to do, rather than general iscourses on what should be taught. The space is kindly allotted to us, and if we fail to utilize it all and make the eduational columns of vital value to teachers, we are censurable in failing to avail ourselves of good opportunities. Ask questions of a practical nature, that have puzzled you in the school-room. Criticise analysis and matter in our text-books and thus aid the committee on text-books

Dr. John Hall utters this bit of wis lom: "Teachers are sometimes tempted to nagging. They do not scold, or rereprove, or punish outright. Better they did. The victim perhaps reports in this way: He or she, as the case may be, in

esponds promptly to generosity, confience, and obvious good will. When the child-heart feels that the teacher wishes, expects and enjoys goodness in the pupil, it has the strongest motive to be good. But let the dark suspicion once get into the mind: 'My teacher likes me to fail and trip, for the satisfaction of being learned is the less of two evils. The effect is to obliterate all that might be

by mutual consent.

Dr. H. C. Porter will continue in the Drug business at the old place, corner of Main and Pine sta, who will actile all the accounts of the late firm and to whom all persons indebted are requested to make to write. It is said that it is as impossible payment.

If ory C. Porter will have charge of the business as heretofore, and will be pleased to see and satisfactority serve all his friends and the patron of this old established Brug House.
