THIRD QUARTER. LESSON IX.

The sixth chanter consists of four in pendent admonitory discourses of une jual length, of quite different contents, and a merely external and circumstantial mection (through points of contact, as petween 'sleep' and 'slumber' in v. 4, and the same expression in v. 10; through the triple warning against impoverishment, vs. 11, 15 and 25, &c... (Zockler).

Zockler's division of the contents of the chapter is the best we have seen: 1 Warning against inconsiderate suretyship, vs. 1-5. 2. Rebuke of the sluggard, vs. 6-11. Warning against deceit and violent dealing, vs. 12-19. 4. Admonition to chastity, vs. 20-35. Our lesson begins with the second divi-

sion: The Rebuke of the Sluggard. V. 6. "Go to the ant, thou sluggard, ant has been famous from remote antiquity for her industry, skill, economy and providence. Frequent allusions are made to her by heathen poets and moralists. Virgil gives a lively description of the ants at work (Aenid iv:402-407). E en as the ants, the winter-wise, are gathered

the road." Long ago, we remember, Cooper's Virgil took exception to this popular notion oncerning the ant. "But we find no tore of provisions laid up against approaching want. For during the cold season of the year they lie in a torpid state, and require no food." This is loudly affirmed by naturalists now-a-days. But notice, first, Solomon does not say that the ant stores up food for consump tion during winter. What he does say s, that the ant, with considerable prulence and forethought, prepares her bread and gathers her food, that is, such food in summer and harvest, when it is most plentiful; and thus shows a wisdom and the best and most timely use of the adantages offered to her." And notice, secondly, that Solomon is speaking of tropical ants, and not of those of the colder European climates. And we have abunprovide against the future. To learn industry and economy Solomon

"no guide, overseer, or ruler." In this regard, Aristotle pointed out, ants differ from cranes and bees. They are so inlustrious and wise that they need no urging or guiding. They lose no time in idleness or indulgence; while food is plenty they gather it and store it up in cells. the power of godlike reason. They have robbed February and gave August no ambition, no shame. They will not go the ants; they would rather the ants should come to them and creep all over

And so Solomon turns with a direct appeal, v. 9. As if to say, "wilt thou contering yellow leaves are seen peeping tinue lying forever? Wilt thou never given in v. 10. It is evidently divided into two parts; the secand fuller expansion of the first, vs. 12in the sense of misrepresenting and slandering the actions of other men, and so denly; suddenly shall he be broken without remedy," like an earthen pitcher that cannot be mended. The 13th v. is said to refer to the custom among Orientals of making communications to each other by means of signs and gestures with the eyes. the hands, and the feet. "By sly winking, by significant gestures, they would covertly convey their insidious meaning,

The fourth division contains an admonition to chastity.
