THE ASHTABULA BRIDGE.

The cause of the horrible railroad supposed by the Democrats would be jury, as well as mechanics and scien- the cast, iron being used indiscrimiselected as the fifth judge, was elect- tiffe men all over the country. Our nately and very injudiciously, as the ed a U. S. Senator, thus removing former townsman, George R. Bram-

"Surely there is some reasonable and rational cause for all these accidents, which must be looked for in other directions. There are some facts in connection with Chief Engiporter in regard to the bridge having been built for a single or double the abutment, said, 'See for yourself where the bridge rested on the pier. Sixteen feet wide up there. Doesn't that answer your question?" He further said that it was intended for a double track when the Company was ready to lay one, and that it was constructed sixteen feet wide (which means from out to out), and perfectly well-made, as far as he knew.

"The conclusions to be drawn from Mr. Collins' own language are, that the bridge was used a number of years as a single-track bridge. It will be important to know for a certainty whether the track, while it was so ised, was laid in the centre of the bridge or on the outside; and, likewise, whether the tests which it is claimed were applied were made while the track was in the centre or on one side of the bridge. There seems to be a shade of evasiveness in Mr. Collins' replies, which would lead to some doubts whether the bridge was originally intended for a double track. So far we have only Mr. Collins' word for it. From all the reports and information that can be gathered, the bridge was what is termed among mechanics and bridgebuilders a single-truss bridge, and, being set over a deep ravine, the track was laid over the top chords of the bridge, as a matter of necessity

or choice,-probably the latter, as

ers or ties. "Now, by placing the inside rails six feet from centre to centre, two passenger coaches could pass each other and have one foot of space beadoption, what good reason can there that distance apart, would bring the distance between the two inside rails being six feet, and the width of the two tracks five feet each, would make Madison, ought to be good enough up the sixteen feet, according to Mr. Collins' statement.

"Allowing that the rails were placed as stated, which in all probability was a fact, and, further-more, that it was never intended that passenger trains should pass each other on the bridge, still, at the same time, there would be plenty of room for freight trains to pass, without any danger or that the tracks, owing to the width of the bridge, had to be laid so that the centre of the train, or weight to be supported, was placed or carried which was at a cost or loss of nearly one-half the strength of the bridge. In other words, at the time of the passing of a heavy train over the whole of the combined strength of the bridge was available. Whenever a train passed over, going either east or west, one or the other of the trusses had all or nearly all of the weight to carry. Had there been a middle truss it would have obviated all the difficulty, and in all human probability the bridge would be standing to-day.

"It will not be forgotten that a ago last May at Dixon, Ill., where the same principles were involved, of carrying a large body or multitude of people on one side of the bridge, oridge, it would have lessened the In signing the bill the President further, and the illustration will be applicable in both cases: It will be about 300 people standing on one side of the bridge.
