Utility vs. Fancy in Short-Horns.

The August number of the National Live Stock Journal has an excellent article on this subject, which we reproduce as follows: The "crisis" which has involved breeding Short-Horns, has reached the breeders of Short-Horns as well as of other classes of stock; and, perhaps, will do no damage, but rather good, in the end. Short-Horn breeders will now have time to study the true end and aim of their business—to find the real foundation of the value of Short-Horns. The trotter must be judged on an entirely different basis from the draft-horse; it is not weight and heavy moving power that is wanted, but suppleness and great-power of muscle; and the Short-Horn, as the most perfect type of the bovine race, must be judged on the same principles of utility as any other breed. It is true that, as the most perfect type, it has its chief present value as the improver of the common cattle of the country, and this gives it an exceptional and greatly enhanced value; yet its solid and permanent basis of value must depend upon its capacity to produce milk and beef. Its ancient pedigree is of value only so far as it assures an eminent capacity to this end, of producing milk and beef most economically. It must be judged simply from this practical standpoint. It is estimated from the best standard only, more than half its real value is gone. The successful breeding power of a race is largely dependent upon its capacity to secrete milk. Short-Horn breeders have usually acted upon the opposite principle—sought to repress the milk secretions and turn the whole activity of the system into the laying-on of flesh and the deposit of fat. That the original Short-Horns were milkers is evidenced by abundant proof, and it is very unfortunate for the usefulness of the race that this aptitude has been repressed. Every consideration of public and private interest at this time should lead Short-Horn breeders to seek to restore the deep-milking quality of the race. To show how short-sighted was this breeding-out of milk and breeding in of excessive fat, it is only necessary to refer to the present value of the dairy and beef product of the country. The beef product each year represents about 5,000,000 head, of all classes, and may be considered as having an average value of \$10 per head, or \$50,000,000. The whole dairy product was estimated by Commissioner Wells, in 1878, after deducting the products consumed on the farm, at \$400,000,000. There certainly can be no doubt that the milk crop of the country is worth far more than the beef crop. Shall we then repress and gradually eliminate from this grand race of cattle the most important and the most permanently profitable natural characteristic? The Short Horn, in its capacity of leading in milk production as well as in that of meat. Is milk in an improved beef race unworthy of consideration? Let us examine the comparative profit of a deep milker from her calves and from her milk. We will estimate the calves as steers reared and fed for beef, for this is the practical profit from the breed is estimated as a simple producer. Many Short-Horn cows have each produced 7,000 to 10,000 pounds of milk in a year; and it is not extravagant to say that they may be so bred that 8,400 pounds shall be an average production of milk. The value of this amount is estimated at less than \$80 per year. Likely Short-Horn steers, at 30 months old, should average 1,600 pounds. We will estimate this steer at six cents, or \$96; and breeding every year, there will be another steer 18 months old, and a calf six months old. Estimating the former at \$69 and the latter at \$30, we have her calves worth, during this two years and a half, is worth \$200. It is estimating the value of her calves as beef at a higher rate than her milk, and yet the milk brings the most money. It is to be noted also that the cost of keeping these calves is more than the keeping of the cow, showing a still greater balance in favor of the milk. We present this very practical view of the question, that breeders may see that economy is all on the side of milk production. Ultimately, even the Short-Horn must come to the test of common utility, and this will show what may be done on that bed rock plane. But we must not forget that the principal present value of Short-Horns is as improver of our common stock, and that they are mostly needed to raise thoroughbred males for that purpose. But, as we said, when judging merely from the standard of breeding, every interest of the breeder requires that he should attend to the milk secretion, and not repress it. They will be surer breeders, and the calves more valuable for it. It must be remembered that one of the strongest reasons offered for not using Short-Horns but for getting better bulls has been that the dams of these bulls are not good milkers, and therefore these bulls will not propagate good milkers. And when we remember that 8,000,000 cows are used specially for this milk, we see the powerful influence that this mistake of repressing the milk secretion of Short-Horn cows has had in shutting out this breed as improver of our dairy. This inexcusable blunder should be atoned for as soon as possible. As dairying widens its territory, and stretches across the continent to the Pacific, it is easy to see that dairymen are to use every means to induce the using of bulls of the best beef-producing breed, if it be also a good milk-producing breed. Milk production is no hindrance to the highest form of perfect development, and to the most perfect development of the animal—it is only opposed to that over-fat condition which is not to be desired in any breeding stock.

To induce sleep—Don't use any drugs. Rise, if you find yourself unwell, and chafe the body and extremities, and thus get up an even circulation. Wakefulness is caused by a pressure of blood upon the brain. A cold bath will induce sleep oftentimes, or a rapid walk in the open air.

**Baking Powder**

Take equal parts of tartaric acid and bicarbonate of soda, by measure, sifted together.

**Educational Department**

Communications may be sent to either of the above, as may be preferred, and will appear in the issue of which he has charge.

**Teachers' Association**

The following questions will be reported by the Committee on Resolutions at the next meeting of the County Teachers' Association: 1. Resolved, That in our rural schools all studies of a higher grade than those in which the law requires teachers to be examined should be taught on regular regular hours, unless otherwise ordered by directors, or taught as a general exercise for the whole school. 2. Resolved, That the best interest of our public schools demand a careful revision of our school laws, so that a re-education or exercise in composition in our public schools, at least once every week. 3. Resolved, That this Association earnestly advise directors to grade the salaries of teachers according to their success in their certificates. 4. Resolved, That as an encouragement to prepare themselves better for their professions, and as an aid to directors of graded and higher schools in the selection of competent teachers, this Association be invited to cause the State to have special examinations in studies of higher grades than those required by law, and that the results on the certificates of the applicants. 5. Resolved, That if I understand the drift of the article in your issue of October 24th inst., headed "No to Words"—it advocates a wrong principle, and in some respects is open to criticism. That a school, college, or charity is under sectarian management or control, in my mind a good reason, for without holding public support, sectarian institutions should be supported only by the private funds of sections. The organic law of Pennsylvania was constructed in accordance with this principle. (See Constitution of Pennsylvania, Article 3d, Section 15.) The "Noble Words" like many others from the same source are misty. If they mean that the public funds should be used to support Presbyterian, Baptist, Methodist, or Roman Catholic institutions—however good these may be in themselves—they mean mischief. If, on the other hand, they mean that it is wrong to withhold public support from these institutions, mostly because there are sectarians among their teachers and managers, why then the words are true, but they are without point or practical application, as nobody ever gave such an authority as to withhold public support from any institution on this ground. In a literary light these "noble words" are very redundant. The sentence "To refuse aid," etc.—beginning in the seventh line of the article—is repeated in the paragraph which follows, without the addition of a single thought, but loaded down with twice as many "noble words." The Educational Department of a paper so extensively read as is the REPORTER, should contain none but the soundest moral, social and political doctrines. It should also be a model of literary excellence though I am apprehensive that the Editor of the highest rule will exclude me from your columns. I congratulate you on the good already accomplished in Bradford County through your labors. Wishing you more abundant success in your worthy endeavors, and hoping you will pardon the freedom of my criticisms, I remain Yours truly, E. G. TRACY, Troy, Oct. 28, 1878.

Wise Ignorance.—We have on several occasions been called upon to listen to some very decided remarks, made by persons of good education, and addressed to teachers. If we could have our say on this subject, we would suggest to such individuals that there was once a man who made a great fortune by minding his own business. We are acquainted with a prominent lawyer, who has never taught a lesson in his life, and yet thinks he knows more about teaching than hundreds of those who have taught twenty-five years. This same man is always ready to address institutes and schools, giving excellent advice in a paternal sort of way, on a subject of which he knows nothing. Still, it does him any good let him talk. But, when he begins to teach, he is in this world is found outside the teaching profession, for there are black sheep among teachers, who have large heads, small brains, and a living and growing desire to advise their brethren. They are always ready to talk, whether it be on Green, on red, on blue, or on any other subject, and it is discouraging and humiliating to find how few teachers there are who can see through the flimsy covering that hides the ignorance of such persons. The world has been vexed with these educational humbugs long enough. Would that something could come up to attract their attention in some other direction. We would like to get ourselves out of the way—

**Vegetation**

We may not believe it, but it is a fact nevertheless, that we take better care of our criminals than we do of our school children, at least as far as pure air is concerned. The air in several school rooms in New York, on examination, averaged twenty parts of carbonic acid in 10,000, while the air in the prison averaged only 14.7 parts. It is said that misery loves company; but, in this case, we do not lack friends in this cause, for the following facts, taken from an English paper, show that at this time, there are, even in England, places still in the dark, and people not far removed from barbarism, as well as in this enlightened America: A young lady had been engaged as a teacher in the boarding-school at North Devon, where there were thirty boys in the school. All the boys slept in one room, the capacity of which was not enough for five. The young lady had to make the beds in the boys' dormitory, which was the only place that had any fresh air, and, as there were only four basins, half of them were down dirty. The sheets were only changed twice in one-half year, and when measles and other illnesses occurred, no doctor was called in. The young teacher had to sleep in the same bed with four others, and when an infectious disease broke out they all caught it. Several pupils carried the infection to their homes. Although the household consisted of seventy persons, only one female servant was kept, and sometimes there was no servant at all. The greatest benefactor of his race will be the person who will invent a cheap, efficient, and perfect method of ventilation.—Educational Monthly.

**Legal**

ASSIGNEE'S NOTICE.—In the District Court of the United States for the District of Pennsylvania, in Bankruptcy, in the matter of James S. Manly, Bankrupt. To whom it may concern: The undersigned hereby gives notice of his appointment as Assignee of James S. Manly, of the Borough of Canton, in the County of Berks, State of Pennsylvania, who has been adjudged a bankrupt by the District Court of said District. Dated at Canton the 26th day of October, A. D. 1878. E. L. MAXLEY, Assignee.

**Administrators' Notice**

Notice is hereby given, that all persons indebted to the estate of Edward S. Manly, Esq., of Towanda, Pa., who made immediate payment and all persons having claims against said estate, must present them authenticated for record, to the undersigned. The Administrator will see personally at his office near his residence on Mondays. In his absence, he may be reached by the undersigned at Overton & Sanderson, his attorneys. M. C. MACKAY, Administrator. Towanda, Oct. 28, 1878. 226
