Running streams—pure water—ready

Churn often, as there is nothing gained by long keeping. Bring the temperature of the cream in the churn to 58°, and not allow it to rise above 94°. Churn early in the morning, while it is cool. First scald the churn, turn the paddles a few times; then pour off, and then pour in cold water, and turn the paddles; pour off, and then pour in your cream. In churning revolve the paddles with an easy regular motion, not too fast nor too slow. Butter should come in about forty

minutes, a little more or a little less if the temperature of the cream when put in was about 58°, ascertained by the thermometer. COLORING

WORKING AND SALTING. When it has "broken" and there is a difficulty to make the butter gather, throw in some cold water and give a few more turns. Some, and I think a majority, of the best butter-makers of to-day wash their butter with cold water before removing from the churn. Gather your butter with the paddle and lift it out condition. Do not handle the ring into the tray, press it gently and incline it, and let the butter-milk run off. Work it gently with the paddle, with a cutting, gentle pressure, but not to mash it; or, better, put into the butter-worker. Salt it about an once to the pound. or to the taste of good customers

only with the best salt, and free from lumps and coarseness. Work the butter only so much so as to expel the butter-milk, but not to work it too dry. This can be done by the use of a weak brine prepared for the purpose. Put the bowl away in a ter down, and pour on the brine until cool place. After standing twelve it is submerged. This will keep really or twenty-four hours, gently press good butter perfectly sweet and fresh out with a ladle or machine, the remaining butter-milk, and any brine that will flow out with it, care being used not to work it too much. If this is done the butter has lost its grain and becomes salvey, and its keeping qualities are greatly injured.

BACKERO PACKING.

within half an inch of the top. Place od suggested.

Over that pour cold brine as strong as can be made of hot water and the [ Estecial pains will be taken to make the purest salt, or cover with a layer of Agricultural Department of the REPORTER line salt. The whole process of makof interest and value to the Farmers of ing the butter, from drawing the Bradford County, by careful selections milk to the placing of the butter in from the best Agricultural journals of the packages, should be hurried, as milk country. We should be glad to giv the cream and butter are going to dieav nuccessful results of the labors and experi- every moment when exposed to the ence of our farmers, as to the best facthods air, however pure it may be. Suchs of Furming, and incite contributions from butter is ready to keep or to sell. those who desire in this way to advance the to be kept long before selling, surround every package with coarse salt by placing them in boxes prepared for the purpose. This process keeps the butter cool and hard, and free from sudden changes of air. When all these things are attended to promptly, and with as much uniformity as is under the power of man to

MILKING-TIME.

Is worth her weight in gold;

And isn't yet five years old.

He wants her, I know that.

An save some for the cat.

"I guess I couldn't, Sir,

You've took a shine to her.

Jest where I go she follers;

She's your'n for thirty dollars.

By them two milk white stara;

But lust let down the bars.

And learnt her, as it were,

But then a man's a man,

Kate's gentic as a dove ;

For nothin' cise but love.

Her natur's like her ma's

To jest le' down the bars."

But never try to drive the lass :

Cover it over with a thick blanket, and, if arranged so that the water will run son was too poor to make hay from anything else, and I am sure that when any farmer once gets into the seed he will not want to get out. It will grow in almost any climate, having been successfully grown in some. Skim as soon as the milk begins Maine to Florida.—Country Gentlepart of nearly every latitude from

Sugar From Maize .- An important discovery has been announced at cream into the cream jar, splash as Washington that is of interest to our little as possible. Stir the cream farmers. A Mr. Drummond says the every time you add more to it, and process of making sugar from India wipe the sides of the pot. Keep the corn is complete and in every cost temperature at about 60 degrees, and demostrated to success. By the prothe cream pot in the coolest part of cess about one lifth less sugar is chthe house, covered with a fine gauze tained from an acre of coin than netting strained on a hoop, not with from an acre of sorghum, or so a tight cover. If covered too tight, much pots. This is an important discovery indeed. Hitherto the sugar cane and the beet root have been the principal source of the sugar of commerce, but sugar cane requires a special soil and climate and the beet root requires very nice cultivation, but corn can be raised to a unlimited extent, and if the new decovery is equal to what is claimed for it, it will prove a new source of wealth to the farming community. Already a Maine farmer declares that an experiment made by him with one acre of Indian corn resulted in more profit than thirty acres of wheat. How to Manage a Young Bull,-

To make a first-class animal, he should run with the cow till he is ax months old, at least; if weaned earlier, fee ! on new milk just from the cow three When likely to be deficient in times a day till he is six months of i. color add a sufficient quantity of then twice a day till eight months The Perfect Butter Color (made by then once a day for a month or so Wells Richardson & Co., Burlington, longer. At an early day, say a Vt.,) to keep it up to the June stand-month sold, give him a little good ard. have some oatmeal, a little oil cake. vegetables, etc., increasing the rations gradually as he grows older. Weaning from milk should be gradual and in pasture time. Ring his nose at eight months, and handle him from that time on daily. After he is weaned, feed as you would other cattle to keep them in the best after it is put in until the wound is entirely healed, and rub on his nose some mutton tallow twice a day.-Practical Farmer.

To PRESERVE BUTTER: To three gallous of brine strong enough to bear an egg add a quarter of a pound of nice white sugar and one teaspoonful of saltpetre. Boil the brine and when it is cold strain carefully. Make your butter into rolls, and wrap each carefully in a clean, white muslin cloth, tying up with a string ter to a depth of at least four inches. Pack in vessels which will impart | This excludes the air, and answers no impurities to the butter. Fill very nearly as well as the first meth-
