J. Andrew Wilt, Eddor. TEACHERS AND TEACHING. We have frequently expressed the opinion in these columns, that better teachers and better schools would bring better wages. We still adhere to the same opinion. It is true that \$22 per month will bring as much now as \$30 would during the war; but we claim that the teachers agrammar recitation, and probably no were not paid as much as they should day passed during his term of school have been. The salaries of common without the frequent use of ungramma school teachers have never been in the cal language, not because he did not same proportion to other professions. We think the teachers themselves are to blame. Too many have kept school, instead of teaching. Some of the teachers in the county have eight and ten dollars a month and "beard really knows. This being true it become around." In some places the Directors school at all, because the teacher did not dren especially in the school room n would have acted wisely to have had no understand her business. Some Teople think for the summer schools the teacher needs but very little youthful mind admonishes teachers " or no qualifications, and consequently they will harmas the Directors and County ble to retain."

A writer in your columns seems tained, and the poor miserable schools think the present arrangement for the keeper is in charge of from 20 to 30 children to point them to the road of learning, and prepare them for the different system we are subject to frequent and stations of life, when that teacher does not know the first principles of the thing with which she is to labor. The teacher knows nothing about the structure of the body of the children, to say nothing of the mind with which they have most Would any farmer entrust a span of colts to "break" to a boy who had never exact for books after once getting been about, or had anything to do with introduced. horses, and did not understand their dispositions? This illustration is not strong enough; for a boy might have strength enough to manage the colts by "brute force," but he would so spoil the colts as to make it necessary to constantly use the same to keep down the bad disposition which he had originally cultivated by his ignorance, and not knowing how to manage them when colts. Just so with this teacher, she does not Just so with this teacher, she does not know how to do anything only because nishing the books needed according to the books n slic knows some one else did so, and if these estimates. she did anything properly, it is not because she knows why-but simply because she is a good imitator. Such teachers deserve about as much credit as teachers assome apes and monkeys, who have been taught to imitate well. Some of our been taught to imitate well. Some of our quired by the pupils of the public so so-called teachers are great imitators, but of the State more or less for three It is possible that these teachers have 'all been married, and have learned practically some lessons in instructing their own offspring, or have left the county. We hope there are none such in this coun- what we now pay, and thousands o No doubt many of our readers will lars saved thereby. Would it not be ty now. We do not believe there is. think we are rather derogatory to the tion with the State Superintendent standing and qualification of some of the move in this matter and procure t teachers that we have had in this county. | quired legislation for a reform of We do not mean to be sarcastic, but we kind. I never have had the please speak of them because we believe them to meeting our worthy County Superi be facts, and to show the folly of employing ent, he having so far as I know such persons, and the positive injury that Tuscarora a wide berth the past We speak of these facts because we believe them to be matters of the past. The his work and will advance the stand reason why why we think so is, that the teachers of the county show more zeal in their work than in the past. The County Superintendent is doing much good work 60 cents. A says he will pay 1, B to prevent any such deficient and unqual- will pay 1, C says he will pay 1. ified teachers from getting into the schools. shall each pay? The Superintendent has given the teachers a chance to learn by a day's drill after | Hence, according to the proposition each examination, and these drills are all pay 13-12, but as the whole can well attended and much interest manifest- consist of 12-12, which in this ca ed on the part of the teachers. These are good indications; we are glad that we have such encouragements. We believe the teachers are beginning to -comprehend the difference between teach ing pupils and "keeping school." SPRING HILL, March 8, 1879. J. Andrew Willy, Esq., Editor Edu- will show their interest in educ CATIONAL DEPARTMENT—Dear Sir: In- | matters by giving us the benefit of closed, please find solution of problem of views. We hope to hear from "P your issue of the 6th instant: Our winter school closed two weeks ago. Oar teacher, Mr. Vaughn, was energetic and faithful to the interests of tions of County Superintendent scholars and parents, and apparently as notes of visitation throughout the well or better qualified to conduct a successful school than many who have precoded him, but the term of three months is so short that comparatively very little get their State appropriation, is the can be accomplished, and scholars during are no funds in the Treasury at the long vacation lose much valuable time, If our State laws were so amended that in lieu of two terms of three mouths each, districts that prefer it could be allowed to expend the same money and hire a competent teacher for a continuous term of five months, beginning in November and closing the first of April. I am satisfied 's our children would show much better ad vancement than our present system of short terms. It would seem merciless to make any changes that would necessitate an increase of taxes, as the burthens are now greater than we can I car, but to derive the greatest benefits from the amount expended should be the aim of all school officials.

Reg leave to thank the people of TOWA!

Reg leave to thank the people of TOWA!

Their very generous patronage extended officials. Our present division of terms operates badly in many ways. To illustrate, we will assume we have a good thorough Now thoroughness is a good thing, but some teachers make a hobby of it. They are determined to be thorough let what may come. They take perhaps the advanced class in arithmetic, that probably the term before got as far as partial payments. Well he starts the class at the BOARDING AND EXCH. beginning, and in his thorough manner takes them along (but I am afraid he does not teach them to add properly. I'never knew a district school that did, notwithstanding their thoroughness. He would hardly allow an advanced class in reading to spell every word as they read either orally or mentally, yet in addition the most practical part of arithmetic he not only allows, but teaches them to compute the sums of numbers by the slow and inaccurate process of spelling out each figure that enters into the combination instead of allowing the perception faculties full scope and reading up or down a column of figures as rapidly and Printed and kept on sale at the REPORTER at wholesale or retail.

The disease can be stamped out now with compara-The cattle plague, which is creatively small loss. If trifled with, and g so much anxiety throughout the tolerated, it cannot but result in a astern States, is a contagious fever, great national calamity. The symptoms of the

The symptoms of the disease are extensive exudation into the rethus discribed in a work entitled iratory organs, and attended by a "Agriculture of Massachusetts," by w typhus inflammation of the lungs, C. L. Flint:

" Hair rough and staring, frequent Europe for ages, at times developshivering, cough, grunting, and other indications of pain, quick pulse, someg incalculable loss. It was importtimes drooling, and more or less dys. into England in 1839, and again puces, according to the extent of the ree years later; and it was estimatthat within twenty-five years there-the plural cavities. In the report of disease and existence of effusion in ter the losses by deaths alone in the Cattle Commission in 1865, in a agland had amounted to \$450,000, case in which the disease was com-0. In 1858 the disease was car- municated by contact with a diseased ed to Australia by an English cow, animal, we find the following: "The ad, spreading to the cattle ranges symtoms were almost constant coughing, (a suppressed sore cough) eyes dull, head depressed, loss of appetite, rought the disease to Brooklyn, great prostration, and we will add a here it has since lingered, slowly quick pulse, sometimes, reaching one quick pulse, sometimes reaching one hundred per minute." reading among the cattle in Kings

TREATMENT.

The only safe treatment is the pole axe. Kill the whole herd: bury the attle, made it necessary for them sick, and sell the healthy beef for what it will bring in the market.

Some Items About Sugar-

On an average, every man, woman by persistent effort, the State paying and child in the United States con-or over 1,000 slaughtered cattle. sumes each year about thirty pounds ince 1867 the disease has not been of cane sugar, and nearly two galnown there. Meanwhile the pest lons of molas es, beside maple sugar, ad invaded Eastern Pennsylvania, honey, and other sweets. Nineteen claware and Maryland, where it has pounds of pure cane sugar are acince prevailed in isolated localities, tually made up of, and can be changed The absence of large herds of moving into, eight pounds of charcoal and attle in these districts, except for eleven pounds of water! Pure white peedy slaughter, has prevented the sugar is made up of eight pounds of charcoal (carbon) and ten pounds of isease from developing into a genwater. Any boy can demonstrate The recent action of the British this roughly by putting a small quanlouncil in forbidding the importal tity of sugar on a piece of thin from ion of the American live cattle is over a hot lamp or coals, and hold ikely to prove of inestimable benefit over it a glass jar, bottom up. The to this country, in forcibly calling sugar will change to pure charcoal, attention to the grave risk that the while the water will rise up and conpresence of the disease on Long dense on the inside of the jar, if it Island and elsewhere constantly en-tails. Fortunately the drift of the from the sugar but ceal and water. cattle traffic is eastward, and as yet | The chemist can easily take the nizehere has been no propagation of the teen pounds of sugar and change it poison in the great cattle ranges of the into eight pounds of charcoal and West. Unless summarily arrested, eleven pounds of pure water, though lowever, the disease will surely reach he has not yet learned how to put the those sources of our cattle supply, coal and the elements of the water torether to produce the sugar . that i mated only in hundreds of millions quires the action of the living plant Our sugar comes mainly from the The experience of all countries into sugar-cane grown in the Southern which the disease has gained access States—mostly from Louisiana—and appears to prove that there is only from the West India islands. The one way of getting rid of it—namely canes are somewhat like corn-stalks, the immediate killing of all infected but larger, taller, and with narrower cattle, and the thorough disinfection leaves. The sap or juice of the cane of the premises in which they are is pressed out between iron rollers, and is then boiled down to syrup, The disease is purely infectious, which crystallizes into sugar grains and is never found in regions where in large vats. Most of the sugar it has not gained a foothold by im- used in Europe is from the juice of portation. Palliative measures have the sugar-beet. It is similar to our n every instance failed to eradicate cane sugar. The raw sugar is refined the disease, and are only justifiable, chiefly in Northern cities, by dissolvas in Australia, after the plague has ing it and straining it through cloth reached dimensions utterly beyond through burned bones, after which it is boiled down until thick

enough to crystalize in grains. EVENING'S MILK RICHEST .- This nary surgeons, most emphatically opsubject has now been put to the test poses every attempt to control the disease by quarantining the sick or by the inoculation of the healthy.

"We may quarantine the sick," he says, "but we cannot quarantine the analyzed the milk of a healthy cow at different periods of the day. The is simply to maintain prolific manu. profess found that the solids of the evening's milk (thirteen per cent.); facturers of the poison, which is given exceeding that of the morning (ten off by the breath of the sick, and by their excretions, in such an extent per cent.), while the water contained that no watchfulness can insure in the fluid was diminished from eighty-nine per cent. to eighty-six against its dissemination. Besides, per cent. The fatty matter gradually the expense of thorough quarantining operation would amount to more | increases as the day progresses. In than the value of the infected animals the morning it amounts to two and whose lives might be saved thereby. one-quarter per cent, at noon three and one-half per cent., and in the Innoculation is still less to be toleratevening five and three-quarters per cent. The practical importance of The Professor says: "Germany, this discovery is at once apparent; it develops the fact that while sixteen Holland, Belgium, France and England, have been treating the victims ounces of morning's milk will yield but one-half ounce of butter, about of this plague for nearly half a century, but the result has only been tury, but the result has only been the increase of disease and death. Our own infected States have been treating it for a third of a century, and to day it exists over a wider. two and three quarters per cent., but area than ever before. Contrast this the albumen is diminished from 44with the results in Massachusetts and 100ths per cent. to 31-100ths per Connecticut, where the disease has cent. Sugar is least abundant at midnight (four and one quarter per expense, and there can be no doubt cent.) and most plentiful at noon as to which is the wisest course. As all the plagues are alike in the proalmost no change at any time of the of the sick, I may be allowed to adday .- Lancaster Farmer.

by the rinderpest. Aberdeen raised CHIPS OF EXPERIENCE.—As I have a fund of £2,000, and though she seen so many reports of products CHIPS OF EXPERIENCE.—As I have. suffered several successive invasions, from different parties, I thought I she speedly crushed out the poison would give a small one in my own whenever it appeared by slaughtering experience. I keep three cows of the sick beasts and disinfecting the premises. The result was that little made 780 pounds of good solid butmore than half the fund was wanted ter, commencing March 1 and ending to reimburse the owners for their the 28th of November, 1878, and for losses, and the splendid herds of the country were preserved. Forfar, on cents on the pound, besides using all the other hand, set herself to cure the plague, with the result of a universal of five persons. The cows had good infection, the loss of many thousands clover pasture and all the salt and all of cattle, and the ruin of hundreds of the water they wanted. I think with farmers. Finally the malady was crushed out of the entire island by have made them do a good deal betthe method adopted by Aberdeen and ter than that. This year I expect to other well advised counties at the keep a record of proceeds of the same three cows, if nothing happens And again, "Cattle have been in- them. I think there is as much profit oculated by the tens of thousands in in keeping a few good cows as any-Belgium and Holland, and of all thing else that a farmer has on his Europe these are the countries now farm. I think a man with small most extensively infected. France, capital, on a small piece of land, can Prussia, Italy, Austria and England make a good living by keeping four have each practiced it on a large scale good cows and 200 chickens, with and each remains a home of the but little outlay. We keep the Black plague. Australia has followed the Spanish fowl; they are good layers practice, and is now and must con- and very hardy. Cor. Practical inue an infected country.
