E. F. GOFF, ATTORNEY-AT-LAW,

To draw the crystal sap away ; The steady drip from wooden lip Makes music in the soft spring air, And soon the laden buckets tip And waste the nectar rich and rare Anon the pungent smoke-wreaths rise Around the kettle's tossing surge; Hale youths attend the sacrific

And high the flames with faggots arge l'transmutation wondrous sweet That steals the blood of bare brown trees, And in the crackling fiames and heat Has power those golden grains to seize ! O van shed youth : O balmy days ! . The odors rise of early flowers. I see again through smoky haze The picture of those fleeting hours ;

I hear again the wild halloo Of boys' long silent in the tomb; The fitful camp-fire brings to view Glad faces from the outer gloom.

They tell of an eternal spring Forever bright, with springing flowers, Where morning is an endless ring. Existence knows not passing hours. It may be that the fixmes of strife Have stored for us some sweets away or, frozen drifts of earthly life May yield a brighter day.

come into the coach and sat down a time. Frobably an average of 200 cups a day throughout the year is a opposite me.

"Indeed, yes," he said. "I'm all I didn't suppose one liver would of gangs of livers, and work them by reliefs they might be able to help him along, especially if he had them

made of tin. But then he was a stranger to me, so I didn't feel justified in making the suggestion.

"No," he continued, "my liver is of no more account than a lump of lead, I suppose," he said plaintively, "it's big as four times yours." And he looked at me with an ap-

comete have been quite accurately determined since Halley's day, and some of them are nearly as well known as those of the planets. Of the remarkable comets of recent days, there may be more particularly mentioned-those 1843 and 1858 and Biela's-the first two because of their beauty and splendor, and the last on account of remarkable circumstances connected with its history. The comet of 1843 may be remembered by any one forty-five years old. It appeared first in February of that year, coming suddenly into sight in the near neighborhood of the sun, and was in view until April. While it was, of course, brilliant only at night, it was visible in full daylight, and it passed nearer to the sun than any recorded body ever known. Its period was calculated by Prof. Hubbard, of Washington, at five hundred and thirty years, and this makes it difficult to understand how it can be supposed that the celestial stranger just reported from Ann Abor is the same with the comet of 1843, as some of the newspapers claim, on the alleged authority of Professor Pierce. Donati's comet, that of 1858, was the most magnificent of modern times. Any man or woman of twentyeight to thirty, and upward, may remember it. It was first seen June 2d, of that year, by Donati, at Florence, and in the same month, independently, by several American observers. among whom was Miss Mitchell. As already remarked, it took three moths to develop its splendid character, but it was in October, four and a half months after its first discovery by the telescope, that it reached its highest brillianc. Then its tail extended forty degrees-from near the horizon one-quaiter way across the sky. It was ten degrees-or twenty times the diameter of the moon-in width, at its outer end, and was of a beautiful, feather-like form. Unless some enterprising amateur astronomer shortens the period of this splendid meteor, its next appearance is not likely to be reported in the Ledger until the

low estimate. The poorer kinds of "Ab," he said, with a deep groan; tea are often not sipped at all, but A comet that appears to be year 3808, for its period is computed stranger to our astronomers was reto be ninetcen hundred and fifty Of the better qualities of tea, some is ported a few nights ago from the
