Sarsaparilla, Dock, Stilingla, and Mandrake vegetable alteratives, Potash and Iron, makes a most effectual cure o a series of complaints which are very preva-

ent and afflicting. It purifies the blood, purges out the lurking humors n the system, that undermine health and settle into troublesome disorders. Eruptions of the skin are the appearance on the surface of humors tha should be expelled from the blood. Internal de rangements are the determination of these same humors to some internal organ, or organs, whose action they derange, and whose substance they disease and destroy. AYEN'S SARSAFARILLA expels these humors from the blood. Selection of Breeding Stock. The art of breeding may be summed up in the one word, selection, or

> the breeding of farm stock. The successful breeder must have a clear idea of the qualities sought, and the quickest and best methods by which such ends may be resched. He must necessarily be keen of sight to ob serve the good and bad points, and the causes by which they have been brought about. His judgment must be of the best to suggest remedies series for working the soil, the plow, for defects, and new methods for bringing out valuable characteristics "He will prove himself the most successful breeder who can select with the most correct judgment." Edward Hammond—whose breeding in the land a mulch, and a finer seed sheep has been so successful, once bed than can be obtained in any othsaid, when asked-what proportion of the rams bred by himself he would down land. But its best service is willingly use in his own flock, an-after the grain has started. It then swered, "Not one in three hundred." hoes it, in effect, and does the work This is but an instance of the care, more thoroughly than can be done in skill, judgment, and, we may add, present sacrifice exercised by the true breeder. We have said that in profitable breeding the selection must be for a distinct and well defined purpose. The first principle in stock breeding was the selection of animals adapted to the circumstances of the given farm, its size, quality of food, etc. The ancients knew that the breeds of animals that had lived for a long period of time on hard fare and a poor soil, would do better on moderate land than those that had the highest kinds of keeppresent sacrifice exercised by the as they do not thrive well if transplanted from a rich to a poor soil.— American Agriculturist for Novem-

Use of Farm Implements.

Most farmers have rollers, yet few acme pulverizing harrow and clod use them much, and fewer still to advantage. They are employed usually for crushing clods, with, however, little benefit generally, as they only reduce the size, while they increase Fat stock consumes a less amount of the number, leaving the land harsh and rough; besides, the hardest lumps are crowded into the soil. The work should be delayed till a rain softens the lumps. The true farmer has few clods to crush; he keeps his teen years.
