DRIFTWOOD.

GRIMALDI-not the clown, but an Itali an savant-has devised an improvemen in rain-gauges by which he can tell when it began to rain and when it stopped.

A CORK newspaper contains an advertisement for a situation as coachman, stating that the applicant is both courageous and a good shot. Ireland seems to resemble Dakota in requiring these qualifications in a good coachman.

A WATCH needing no winding up is the latest production of European art. It runs itself by electricity. An electric magnet fixed inside the watch keeps the spring perpetually in a state of tension. the owner has but to preserve the battery in proper working order, for which purlose one or two inspections in a year are enough. It is the work of a Copenhagen watchmaker.

A DISCHARGED government clerk last September asked Chairman Jewell to send him to Indiana to spot Democratio repeaters. Mr. Jewell did so, giving him a check for \$100. The ex-clerk raised it to \$1,000 and took it to Barnum, said he had been hired by Jewell to take Republican repeaters to Indiana, and offered to turn the repeaters over to the Democrats for a consideration. Barnum gave him a \$2,000 check, whereupon the youth destroyed Jewell's check with his forgery on it, cashed Barnum's check, and skip-

DETECTIVES will soon be able to carry a kit of photographic apparatus on their shoulders except when they are in disguise; even then they can make up as bootblacks. The kit, invented by a photographer named Bolas, containing gelatine plates already in position, and a lens that is always in focus for any distance from twenty to thirty feet. It may be dropped in the street whenever the owner sees a group he wants a picture of. When it touches the ground a bulb is squeezed and the exposure is made.

A New York engineer thinks the racket of the clevated railroad trains can be turned to music by using the Æolian harp principle. Says he: "You know a train in running along a track makes a vacuum-underneath it. Then the air rushing in makes the rumbling noise you hear: Now, my idea is to turn that noise into music. You may make a malodeon harn of wires and hitch it on to the front and rear of trains. The air rushing through makes it play. Excursion parties would need no band then. They could ride up and down and have all the music they want. I'm working at it. You'll hear of it some day."

A rew days ago a letter was mailed in New Orleans, addressed as follows: "Swift as the train pursue your way. Stop not for flag nor banner, Until you reach Miss Sophie May,

, In Clinton, Louisiana." Bad roads and weather made this sweet missive miscarry, and when it was set right again by the postmaster at Por Hudson, he wrote on it:

"Go on ! go on ! You must not stay ! Since mail facilities are great; But when you reach Miss Sophie May, You'll only be five days too late,"

Probably the whole letter was written in the same strain. But General Garfield has his eye on that Port Hudson postmaster, who had better "beware the ides of

ONE of the best instances of the value of keeping your mouth shut on general principles occurred lately in the Kentucky Penitentiary. Sam Holmes was in for a murder, and his health became very bad Lucien Young, an ex-schoolmate, exerted himself to get a pardon for Holmes, and the Governor granted it. Young visited Holmes in the penitentiary, with the document in his pocket, but said nothing about it, going into a lengthy talk about old times, etc. At last he said: "Sam, if you were turned loose and fully pardoned, what would be the first thing you would do?" The convict very quickly responded: "I would go to Lancaster, and kill Judge Owsley and another scoundrel who was a witness against me." Young turned away without delivering the pardon, said nothing more, and tore the paper to pieces when he got outside.

THE real-life counterpart of Tittlebat Titmouse, M. P., in Warren's novel of "Ten Thousand a Year," has been found in Washington. Tittlebat's hair was about the color of Central Jersey sand, and to dye it black he got some stuff that made it bright green one day and perfectly white the next. The Washington victim of some such alleged hair dye was a white-haired old clerk in the Post-office Department. He had a formula according to which be had the liquid put up by a drug clerk, and in an hour his hair and beard were a beautiful black. He was delighted. The next day he was delighted on the other side of his face. When he awoke and looked at his hair in the morning it had a beautiful carmine bue. He called on that drug clerk, and wanted to kill him for playing a trick on him. The clerk sent him to a barber's shop, where he cared things with nitrate of silver. Then he used the hair-dye for red ink, and took the bottle to the department with him for every-day use. Other clerks liked the color of the ink, and learning that the formula was valuable, he sold it to a New York ink manufacturer for \$2,-000, for whom it has made fame and for-

THE Chicago Inter-Ocean has heard of a plan for obviating the objections urged against the underground cable system of running street cars now used in San Francisco and extensively agitated in Chicago, where it is opposed on the ground that it cannot turn corners. It is proposed to build an elevated railroad track eighteen feet above the street level and to run a truck on it. Suspended by metal railing from the truck, so as to be only a foot and a-half from the ground, is the passenger car proper. The columns sustaining the track are to have cushion insulators and the track wheels to be on papier mache, so the running will be noiseless. The track is to be endless and so is the cable, running through a groove on the stop of the truck. The groove can be tightened or loosened at will by means of trolled by the engineer. If where the cable has been released the truck and car should have too great a mome the truck wheels, stopping the car in- CARTER'S LITTLE LIVER FILLS stantly. In turning the rounded corners ble disconnects at the corner, and the car itself again), or can be turned by hand or

VEGETABLE COMPOUND.

The Positive Cure

For all Female Complaints.

This preparation, as its name_signifies, consists of Vegetable Properties that are harmless to the most del

scate invalid. Upon one trial the incrits of this Com

pound will be recognized, as relief is immediate; and when its use is continued, in ninety-nine cases in a hun,

tify. On account of its proven merits, it is to day re commended and prescribed by the best physicians in

the country.

It will cure entirely the worst form of falling

of the uterus, Leucorrhom, irregular and painful Menstruction, all Ovarian Troubles, Inflammation and

memorranion, in ovariant of the con-pequent spinal weakness, and is especially adapted to the Change of Life. It will dissolve and expet tumors

from the aterusin an early stage of development. The sendency to cancerous humors there is checked very

specify by its use.

In fact it has proved to be the greatest and best remedy that has ever been discovered. It permeates every partion of the rystem, and gives

new lifeand vigor. It removes faintness, flatulency, do stroys all craving for stimulants, and relieves weakness

of the stomach
It cures Bloating, Headaches, Nervous Prostration,

General Debility, Siceplessness, Depression and Indi-gration. That feeling of bearing down, causing pain,

weight and backache, is always permenently cured by

its use. It will at all times, and under all circumstan ces, act in harmony with the law that governs the

The Principles of Pruning. The art of pruning is one of the implest as well as one of the most important operations connected with porticulture. Yet it is one that is frequently neglected or ill-perform-

ed. The principal objects of pruning are to induce a vigorous and sym-Simmons Liver Re gautor metrical growth, remove superfluous wood, and promote fruitfulness. Whatever be the form of training adopted, there are some general principles underlying all pruning or era-tions which should be observed to some extent, though no precise rule can be given for all cases. Briefly the growth of wood is large and the tree or vine vigorous, more wood should generally be cut away than

> both wood and fruit, pruning of the wood and thinning of the fruit, or both, may be necessary in order to produce the best specimens. Shy bearing in trees is sometimes treated with root pruning. When an upright growth is desired, pruning of the lateral growth is required, and when a rounded, bush growth is wanted, the main or central stem and longest laterals should be shortened in.

To prune successfully requires taste and good judgment, and much ence, and any system of setting milk, beauty and utility can be given to if all the ordinary precautions are the form of a tree by proper pruning; taken, will give the same results. but too much or unskillful pruning may be done with scarcely less injurious results than those that follow Costiveness. Jaundice. Dyspepsia, Indigestion, the neglect of the operation. Pruning at the wrong season, the removal and Breath, Headache, of very large branches, and the neg- and a long list of expenses incurred Erysipelas, Piles, Rheu- lect to prune, are responsible causes matism, Eruptions and Skin Diseases, Biliousness. of butter making was destined to undergo s change, and the tin pan of the dairy "must go." Since that time there has been a constant and persistent controversy going on between the advocates of deep and shallow setting of milk. From the one patent more than a score have been brought out, all possessing merits, but only in fact variations of the one idea.

For a time it seemed that the shallow pan advocates were doomed to be routed; but the invention of a large shallow pan, let into the side of a box just like a bureau drawer. and subjected to the influence of a descending current of air, cooled with ice, caused a revival of the shallow theory, and together with the stated, these principles are: When advent of the cetrifugal, vacum cream extractor, Fairlamb system, and others, the contests have become almost even, with equal results for all. In when the tendency to the production one the old open pan excels them all, of wood is small. When there is a unless it be that the bureau creamery great tendency to the production of has this merit. The cream of the shallow pan is more solid, of a deeper richer color, and has a more buttery look than any of the deep or submerged systems. Put to a series. of tests, extending through a year, there was no advantage gained by either method. Harry Lewis asserts that his preference is for the timehonored tin pan; its results have proved more satisfactory, while Henry Stewart says it simply resolves itself into the question of conveni-

The subject then with the farmer is how best to attain these results, If buildings have to be erected, anentire equipment of pans, ctc., bought, spring houses put in repair, to enable the operator to make a for the irregular-headed and unshape- prime article of butter, then a creamly trees which are found in far too ery with the deep pans had best be many orchards. at hand, then a dairy house free from on trees, pruning and training should odors, and so arranged that its atbe commenced when the trees are mospheric conditions can be controllquite young.
