GRAFTING FROIT TREES.-An interesting discovery has been made in France with regard to engrating fruit trees. Instead of making use of a graft, a slip is taken from an apple tree, for example, and planted in a potato, so that a couple of inches of the slip remain visinte. It soon takes root, develops itself, and finally becomes a handsome tree bearing fine truit. This method is due to a Bohemian gärdener.

THE LATEST CUBIOUS USE FOR INDIA RUBBER -A French artist has invented and exhibited at the Paris exhibition samples of a novel plan for enlarging and reducing maps and designs.
