Exchanging Mails on the Railroads, It has been in contemplation for some time past by the officials of the Post Office Departof exchanging mails on express trains while passing stations at full speed thus obvieting the necessity of stopping, or slacking speed, excepting at such points as the managers may elect. The experiment has been tried on the Illinois Central Railway, and proved a complete success. The engine, with a car to which was attached the apparatus, was run at various rates of speed; and in every instance the exchange was completely and satisfactorily made in the presence of a number of gentlemen. The mail pounds contained a welch of contents somewhatheavier than what is usually packed in a pound for exchange; and it seems from the fact domonstrated that the ulmost rapidity at which a train can run will not effect the operation of the apparatus, which is extremely aimple and not liable to get out of order at any time. This toyel improvement, when fully introduced, will work great changes in the postal service all over the country, in which, the railroad compunies ard the public specially should have a great interest.
