by Medera quadratic, took and Woods. Jacontering on an extended notice of works of this kind, it is very difficult for a person, not practically sequainted with the modus operandi by which sicel is converted from the raw mate-manufacture of sizel with na is yet in 10 infance, but yongs as it 18,5it competes successfully with the meminacture of our English cousifs, and our enterprising manufacturers tidd a unified molis-prided sway. New England with her busy fac tories calls upon the Smoky Curty for steel for the manufacture of curtery, and the thousand ersa to which it is synthese where the for the transformer and the state of manufacture of curtery, and the thousand ersa to which it is synthed, and we do not hesitate on predict that the day is not tar distant whom our domestic markets will be supplied with the manu-diatore of our bare land. And why should the heat for sime the solid on the solid the heat for all, or all bot the cheap labor, and the both cosife. We have the material and the shift, in fact exceptibles but the cheap labor, and the is in the solid on any solid on the is in this for all, and the solid on the is in this for all, and not be the solid on the is in the heat cosife. We have the knew is have to heat on the is applied on all both the is bother country will have to knew is a sharp look ont, or we will be unly on an akter, without looking to har for all. And the manufacture of sizel the best quality of

this, brain many other kinds of work, and by this, brain paper our own markets, without looking to her for ald. "In the marufacture of sicel the best quality of iton is wided." It is known as the Peru iron, and is obtained in the "northern part of the State of New York. The blooms are that folled into bars of a suitable size, after which they are straight-ened, and charged in the couriering furnaces. It is necessary that they should be perfectly straight. In order that the charcosi may be evanly distributed through the whole mass. These fur-neces, and charged in the couriering furnaces. It is necessary that they should be perfectly straight. In order that the charcosi may be evanly distributed through the whole mass. These fur-neces, and charged the whole interact of the strand there of which there are four-are capable of ontaining thirty tons each, and each furnace turns out about sixity tons per month, or two batches per mouth each. It requires seven days to convert it into steel, and six days to cool. It is now what is known as A merican bilster ideal. It is then broken up, and charged in the crucibles. These crucibles are one hundred and is weaty-four in number, and make a charge of sixity-two holes. They cost two dollars and flfy cents each, and can be used for only four heats. The crucible is now what is known could be are which as y water. This is cust in from moulds to suitable sizes of signare or dat increas, there which as y we received." It is uw trimmed and theroughy lospected, undergoing a "most idd scrutiny, after which it is samped with the present proprisors to carry four distanced. In entering the concert, the beholder isstrack with astonishment at the complicated mass of machared are of four which and will save notiber have holes may be complicated is a so four the attendance of Mr. William Woods, whose hole attendance

THE JUDGHS' BOAT.
