CITY AND SUBURBAN.

JONES & NIMICE MANUFACT, BING COMPANY.

Prominent among our manufactories is the

Company whose name heads our present article. As makers of domestic and building hardware. their reputation is almost world-wide. Their wares are shipped north, south, east and west, to the West Indies, and to California-go almost where you will, you find the evidences of their handicraft. Since the Company have been in operation, its business has spread so rapidly, that it has been found absolutely necessary to establish branches in other citics, most promi-nent among which are the Cincinnati and Chicago branches. THE COMPANY'S OFFICERS.

The officers of the Company are as follows : President-Alexander Nimick. Vice-President-J. H. Jones. Treasurer-W. W. Patrick.

tors-Alexander Nimick, J. H. Jones, Patrick, A. M. Wallingford, W. K. Nim-

k." General Superintendent-Albert M. Hill. Clerks-Mr. J. Alexander, Book keeper; M. . Hind.elright, Business and Shipping clerk.

BUILDINGS.

Prior to the incorporation of the present com-any, and at the time when the business was Prior to the incorporation of the present com-pany, and at the time when the business was carried on under the name and style of Jones, Whilingford & Co., the works were situated on life cerner of Grant and Water streets. The rapid increase of their custom, however, soon proved the fact that they were too limited in space to carry on so extensive a business as theirs was growing to be, and after the forma-tion of the present company, it was deemed ex-pedient to look around for some other locality... They eventually purchased the building on Dis-mond street formerly occupied by Mr. Patterson as a livery stable,—the apper story of which, it will be romembered was occupied by the Pits-lurgh Gymnasium-together with the property signaling. This gave them a front on Diamond street of 140 feet, extending along Cherry alley to a private alley 120 feet, thence cast along said private alley 120 feet, thence east along said hor by the man area of 16,600 feet. Upon this lot they have erected one four story brick build-ing (120 feet front by 120 feet deep, and a three story brick building, 120 feet, front by 120 feet deep. This building is one of the best arranged in the city for manufacturing purposes. There is not a fip place or story in the bending, cvery department being heated by the exhausi steam, which oventually casepes into a sever at the lower corner of the works. This exhaust siesen plays a singular freak, and has upon several occasions decired the thr-ment. On the opposite side of the street from the works is a face brick building, owned appression as a birding and construction be the cust for manual super several coccasions decired the thro-ment. On the opposite side of the street from the works is a face brick building, owned appression as the lower and bend occasions decired the tra-ment. On the opposite side of the street from the works is a face brick building, owned appression as the lower of the street from the works is a face brick building, owned appression as and base of the street from the wo

This exhaut steam plays a singular frank, and has upon several occusions decived the tra-men. On the opposite side of the wirest from the vorks is a floe brick building, owned by Mr. Wile, and occupied for the most parts as law offices. The pipes which convey the water from the roof of this building, extend into the sewer, and the steam taking the direction of the draugu, accesds these pipes, and coming out at the putter on the roof, gives the appearance of the house being on fire and on segret locations

the house being on fire, and on several occasions has been the means of bringing the firemen to the spot. This circumstance has suggested the idea

itto the annealing furnace,iet occuptor the 15' opartiment ofter which it is ready to para 14' the hards of the finisher. The annealing furnace is bested by coke, and its arrangement is such as to preclude the possibility of dange

ENGINE ROOM.

ENGLIE ROOM. From the foundry we also enter the engine room, where is one of the handsomest engines we Lava seen anywhere. It is a horizontal en-gine, and was built by M'latosh. Humphill & Co, expressly for this company. It is a forty here power engine, with a twelre luch cylin-der and two feet stroke, and so perfect is fit in its arrangement, that when driving all the vast machicery of the works it runs without the slightest perceptible jar or noise. The boiler is a tubular boiler, twenty-six feet in length, by forty inches in diameter, and so built that the water is entirely around the fire except at the coor of the furnace. It requires built from twelve to fourteen bashels of coal a day to run it, treater with the rolues of the carpenter stop, ard in fact that is the total sumont of water. The exglue room is very complete in lis algorithmente, and being kept very clean at d neat, mote rusmbies an office than an en-gite room.

CARPENTER SHOP.

CARPENTER SHCP. From the engine room we enter the carpenter shop, which is sixty fact wide by one handred and twenty fect deep, it being also in the lower story of the main building. It is here that all of the borre, and wood work of the coffee miles and other articles is made. We noticed quite a number of glits employed in this depart-ment, palling the bores together as the carpen-ties would get out the sind. The turning in thes, "dere the wood work is all done, is also in this room, together with five run of large grind-stores, there being five more in other parts of the works. SECOND FLOOR.

SECOND FLOCE. We have before meniloud that the brack foundry, a fire-proof apartment, was located on the second floor. Connected with this room is a knob and eore room; in which are two furnaces —one for miching the composition used for at-isching the knobs to the spindles, and the other for a sping the corts used in the different kinds of castings. This room is also paved with wrick, and the furnaces are to arranged as to carry of all the furnes arising from the melled compo-sition, or drying matter. The funnes arising frem sulphur are very disapresable, and the pres-ert arrangement is such as to tellere the work-men of this, and rer der his labors pleasant. It is in the minor details of this concern that one first with an ere to general economy, and et the same time to inhister to the comfort and convenience of the employees. JAPANNING BOOM. a Customer can see at a ginarce what incre is that would be necessary for his basiness. CONCLUSION. The works were first established in the year i852 by Jones, Wallingford, & Co., who con-ducted the business until the year 1953, the Jones & Nimick manufacturing company being a direct succession of that firm. It is the inten-ilon of the present company to bring to bear ev-erything that art, science, skill, experience, in-rentior, genins and capital can procure to bring their works to perfection. They are gentlemens who have not only been known long and well in our own community, but their business relations has give them a widely extended business repu-tation. Strangers passing through the city are constantly lequiling. "What works of more than ordinary interest have yon in your city, that would be worth while visiting?" We would arswer, visit the establishment of the Jones & Nimick manufacturing company.

JAPANNING ROOM. On laring the knob and core department, we enter the room where the japanning is done. Here the ware that is to be japanned, after hay-ing when thoroughly cleaned, is dipped in the preparation, after which is is arranged in the drying fromece. These furnances are two in num-ber, and are so erected that a parson can walk in and arrange the japanned ware in one, while the other is in full heat, although they adjott one arother, there being only a brick wall separa-ting them.

A Supposed Poisoning Case-Coroner's In-

arother, there being only a brick wall separa-ting them. The construction of these ovens has attracted a great deal of attention from those who are in-terested in jepaning, for nearly all the fires that occur in establishments of this kind, origi-nate in the jepaning room. The work also which comes from them is very superior, having a polish and general finish that we have never sere excelled-fieldom equalid. It requires but little coke to heat the ovens; the furnaces are outside of the building, so that to offers are used in the jepan room. This room is also paved with brick laid in coment.

give opportuality for a pest mortom examination, in case such abould be deemed necessary. The father testilbed that the little girl was ta-ken sick suddenly about three weeks ago. He wont for Dr. Knox, who inquired what was the matter with the child. Witness could not tell. The Doctor gave a prescription, but the child continued to grow worke and died on Saturday. There was no poison about the house to his knowledce. FOLISHING ROOM. FOLISHING ROOM. Passing from the japan room we enter the pol-lableg :oom, where are six run of emery wheels, It is here that the finishing touches are given to sil polished ware, preparatory to packing. The areoritisg room is convenient to this depart-

men'. Ascending to the third floor of the main buildnowledge. Mrs. Dietrich testified that the child was play-

to her, some, that the same stam that here is their works, would also hest a number of build-ings adjoining, if the proper conduits were only prepared. Is would certainly be much more (conomical, and much cleaner, and we would here suggest, that if steam was used a little heating purposes, we would req coal, and consequently and dirt.

THE SMORE STACE.

In order that the neighborhood may not be incommoded by the smoke of the works, the Company have crected an immense stack, said to be the tallest of any chimney in Pittst to be the tailest of any chinney in Pittsburgh. It is one hundred and twenty feet in height, and required upwards of one hundred and thirty thunsand blick in its erection. It is of a square abape, tageting towards the top; which is orna-mented with immense leaves cut out of sheet iroo. Its great height makes it an object that attracts much attention.

FOUNDRY.

FOUNDRY. Upbe enlering the office, and making known our business, Mr. J. H. Jone, Vice President of the Company very kindly volunteered his ser-view to show us through the enline concorn, and explain the workings of the immense es-tabilishment. Entering the ground floor in the easier wing of the building, wo found our-selves in the moulding room of the foundry, which is 60 fest front by 120 fest deep. Here we met Mr. Albert M. Hill, the General Super-iftendets, who was busily employed in directing the work, and closly scralinging its progress. The floor was covered with schall moulds, ready to receive the molten metal, into which some of the mere were even then engaged in pouring it. These moulds are from paterns of almost every conceivable description of domestic and build-ing hardware and other articles, some of them being might that it would appear to be impos-sible that is in contine ing hardware and other articles, some of them sible that sh iron easting could be obtained from them, and yet so exilifully is each department managed, that the casting-although in some in-stances not thicker than sheet brass-come from the mould as perfect, and as amount almost, as though it wate presented from sheet irros. This is ano of the results of long experience, and great mechanical skill, and we do, not hesizate there we call a she we call a simulants in the grast mechanical same, and we stabilize in the tongy that there are few stabilizements in the Unned States that can equal them in the perfec-tion of their easting-none containly that can

tion of their easing mode to make that can strates them. The moulders benches differ from anything of witholine that that we have eren before seen. In all buildings where machinery is at work, there is more or ites; and in the work of moulding such small articles, this constant jardiate demand. moulding such small stitlets, this constant jar-ring would be fatal to the perfection of the mould, it some method could not be deviaed to make the workmen's stands permanent. This is efficiently passing from bolis entirely-through the solid brick wall, the outside head being secured by a large wather, and the open of keleton stand fastened by means of nuts on the 'inside, At, each stand is a bolt with a ring stisch-cid to it, sho fastened in the wall, and in this 'ring there is an iron cup, which holds the mould-ers' sporge and water. An iron shell for the 'moulders' tools, as lace connected with each stand here suppressing water. An ion such to the moulders' tools is also connected with each stand in the same way. The fasts used are of the mices improved pattern, and in the arrangement of each department, they have brought to bear their own long experience, together with that of eastern manufacturers, which they have in . same measure adorted.

of eastern manuacturers, which they have in . some measure adopted. The cupols for melting the iron is outside of the msin building, and is built upon McKenzie's improved putchile of stack and blower, or fins. It has a capacity for melting from ive to six tons at a single beat. It is so arranged that the workmen receive the molten metal in small isdiff, on the inside of the four-dry, so that none of them have to walk over from situ to sevent. ladies, on the inside of the four-dry, to that none of them bare to walk over from sirty to seven; five feet to full their facts, thus giving the metal no time to cool and inenring a perfect fusion in the moulds. The foundry occupies two stories of the buildings, the mode of ingress and egress herwere the two being by inclined planes, in-stead, of estims. The second story department where all the bress enging is done, and is to red with brick laid in cement, rendering it , if etci fire proof. The bress furnaces are also to the building.

DROXING ROOM. On the eccord floor is an epartment devoted exclusively to bronzing lamp stands, pendants, brackets, harge or targers for isong reflector backs and other switches. In this room may be found a full associate of all goods required to complete alampistok, except the glass ware. There is no other establishment west of the Al-isarbary mountains that manufactures this kind There is no their establishment west of the Al-legheny mountains that manufactures this kind of wrre. It is astonishing to what a degree of perfection these bin. light castings have been prought. We cramited snumber, and although no thicker than sheet brass-end when branzal mest rescribing it,--they were as smooth as plausched tim. The beaulfal faish of this work immediately attracts the admiration of the visi-

Interfreeduling, in-they will all dish of this work inmediately attracts the admiration of the visi-ter, and we doubt if it can be equalled, much less excelled in any part of the United States for smoothness and finish. Of the remainder of this floor, outside of the coffice, a portion is used as a slore-room, for the exhibition of goods, and the remainder is used for packing and storing.

BAKER & PATTERSON'S HOES.

backade. Smith did not wast to go to jail, and could not zet ball, and in lbis emergency he re-quetted the efficer to accompany him to his wife, feeling assured he could "imake it all right with her." His wife was hunted pp, end p-raused to settle the matter, geing with Smith and the efficer to the magis-trate's effice for that purpose. Everything was arranged between them, apparently, costs paid, and proceedings withdrawn. The couple left the Alderman's effice together, and had proceed-ed but as far as the first street corner. when Smith, with the almpie remark "good bye," left his wife to go her way, and was soon out of her sight. She returned to the Alderman's, stated this fact, and also her belief that her hus-bood had deceived her in the settlement. Is this view of the matter the Alderman concert d, and expressed the opinion that Smith's design was to get ont of the reach of the law. He is a Baitmoorean, and but recently married the wo-men he has that impoeed upon. In the event of this secoed appretension, he may field it more difficult of field to Statument. DAKER 4 PATTERSON'S HOES. One of the specialties of the concern, is the manfacture of planters and farmers hoes, made under the patent of Messrs Baker & Patterson. This hoe is certainly superior to any thing of the kind ever introduced into the market. The very best quality of steal is used, and the blades being cut to the proper shape, the cyclis drawn direct-ly up out of the body of the hoe, making it a part and parchlory for the purpose of going into the manufacture of these hoes on an extensive receibing machinery for the purpose of going into the manufacture of these hoes on an extensive reale. The machinery consists in part of a heat-ing furnace, six power presses, shearing machiners, Boldiers' Bountles.

ng furnace, six power presses, shearing machine and emery wheels, sufficient for the production

and emery wheels, sufficient for the production of the bundred dozen daily. In the manufacture of this hoe, after the size' has been cut to the proper shape, it is passed if rearize a series of dics which are contained in the six presses monitored abore, and it is brought out in finished form, the solid cycloling drawn from the sheet of steel of which the boe is made. They are very strong, and thour opin-ion are bound to supersede all other kinds of boe now in use. They are prepared to manufacture all kinds and sizes upon the shortest notice, and will also keep a large stock on hand for imme-diate demand. pose of taking action towards memorializing Congress, at the coming session, to equalize Congitty, at the coming session, to equance bonatics. These who entered the service at the beginning of the war received very little com-reseation in the way of bounties, while these who emissic lear its close of the war were paid large sums. Similar meetings to the one pro-peed, have been held in Fhiladelphis and other cities, and if a united effort is made the desired object can combulies the efforted. These inter-GENERALITIES.

diste demand. GENERALITIES. The company mannfacture, a full and com-plete assortment of knob, dodd and other locks, spiring, drop, thumb and night latches, coflex miles, platform and counter scales, planters and farmers hore, shatter hinges and fastenings, and a general assortment of domestic and builders hurdware, together with unilcablefion carriage works, bonzed iron lamp furniture, and a thou-sand other articles, generally manufactured in manufacturing largely Jones' patent meat cut-ter, an improvement in Hale's meat cutter, for-merly manufactured by the Kinsel & Erwin Manufacturing Company of New Britain, Connecticat. A great complaint among builders heretofore has been that it was impossible to purchase a fue lock in Pittsburgh, that they could get plen-has deen that it was impossible to purchase a fue to leak in Pittsburgh, that they could get plen-have determired to overcome this difficulty, and for that purpose have got up patterns for locks of the very finest and best quality and descrip-tion. Their building hardware as a general thing will all be of the very finest quality. The Company have a full and complete illustrated catalogue and price its of all the articles they manufacture which they furnish all dealers with on application. On and other the first of January next, the ten years and eleven months, son of Balthazar mpy, residing on the canal bank, near Chest Jemp, residing on the canal bank, near Checi-nui street, Alleghery, met with an accident at the rallmod depoi on Federal street, by which ho has lost both his legs. It appears that he was crossing, or walking on the track, acd being stuck by a train was knocked dows, the cars passing orer his legs above the knees. Drs. Hardimester and Thorn were called in and am-putated both limbs. The lad was in an appa-retily easy condition on Sunday morning, and his physicians expressed hopes of his recovery.

his physicians expressed hopes of his recovery. The Lecture To-night.—The first lecture of the season will be delivered this evening, under the anypices of the Tempyson club, at Masonic Hall, by the distinguished post and ha-merist, John G. Sare. The lecture has always been warnely welcomed by our clizens, and we anucleate a large and appreciative andience at Masoule Hall this evening. The subject, "Po-etty and the Poet," in the hands of a master like Sare, cannot fail to interest all classes. Tickets can be obtained at the neural places du-ring the day, and at the hall in the evening. Mr. Sare arrived in the city pasterday afternoon, and is stopping at the Monongahela House.
