OIL FOUND IN SUGAR GROVE, PA .- Since ast spring a company has been prospecting for petroleum near a stream known as Jackson Run, 6 miles south of Sugar Grove village, and in the south; east corner of the township. One well has been put down to the present depth of 420 fr. But little the city. notice has been taken of it during the progress of drilling, as it was quite generally onceded to be a sort of a bezardous, wild cat experiment. But a closer investigation and a knowledge of certain well known facts in regard to the location and general direction of the oleaginous fluid conclusive. ly proves this well to have been scientifically located with reference to the geological records of the best producing oil districts. Operators have reduced the result of much experience to something very near a science and have been principally guided by this as a fixed fact in their lovestigations for oil. So that now one well in every 3 pays, where five years ago one well in every 8 did not. It is evident from territory developed that the oil extends in one or more large veins or "belts" in a general course from the north east to south west .--And that the different regular stratus of sand rock are not at, or near a water I evel, but dip in a south westerly direction . So that where the third sand rock is found at Tidioute, at the depth of from 450 to 550 ftaccording to the elevation of the bills, this strate of sand rock is found at Parkers Italian and Spanish Embassadors. Landing on the river at a depth of from 800 to 1100 ft , and at intermediate places in like proportion. This "belt" followed in a direct line through Oil City, Pithole, Hickory and Tidioute, places this well on Jackson Run on the exact range with the best producing oil territory. Mr. Wm. Nevins, one of the company, located this well chiefly with faith in this "belt."

The record of this well is as follows: Mountain Sand from - - 17 ft to 28 ft. Slate Rock from - - - 28 " " 80 " 2d " " - - 304 " " 337 " The nort 3d " " - - 390 " " 420 " Prussians. And still in the 3d sand.

In the second sand a small show of oil was discovered and several gallons pumped out with the sand pump. At 420 feet the present vein was struck which is now yielding at the rate of about three barrels per day. The oil is of a very superior lubricating quality, guaging 28 by the hydrometer, which is said to be the heaviest oil produced from any well in the old regions, with but one exception. It has been pump ing at the present rate for two weeks. A well this week, when, if the supply of oil is not increased the well will be put down deeper. A different opinion exists with the Co. in regard to the strata of sand which they are now in. Some believe it is not deep enough for the 3d sand, and considering what has been termed the 1st sand in the well to have been a "stray sand," thus rendering them now only in the 24 sand. This well and territory are chiefly owned by Mr. Angell, from Forestville, N. Y-Jamestown Journal.

An exciting game of base ball was played at Columbia farm, yesterday, between the Columbia B. B. C. and the Rynd Farm B. B. C., which was witnessed by a large number of ladies and gentlemen. Both clubs done their best as the following score will show:

NEW TERRITORY .- A well on the Ream farm, about four miles out of Franklin on the Cooperstown road, struck some time since, is yielding four barrels per day of call. But an addition of\$2,000 to the heavy lubricating oil. The striking of this well has brought this territory in notice among oil operators and It is rapidly being taken up. We are informed that six months ago this land could be bought for \$30 per acre; now it readily brings \$100. Experienced oil operators who have "prospected" in that neighborhood consider the territory first-class for-oil purposes.

Many of the Broadway hotels are so crowded that they have accually to turn guests away. The rush to New York city from almost all points, is very great, and on the "Lowell estate," at Boston High- the chances are in favor of its continuance for some time to come.
