A NEW THEORY. - Considerable interest is manifested at present in regard to the Brady's Bend Iron Co's wells No. 6 and 7, located near Queenstown, about threefourths of a mile from the developed territory on Armstrong Run. The wells have every indication of being good paying investmente. Both wells were located by Mr. Mills, Superintendent of the Brady's Bead Iron Co., who is a practical Geologist, having made that science a study and used the knowledge to advantage in the location of pany's iron mines. In the location of these wells Mr. M. followed the same plan adopted by bim to regard to the dipe in the iron ore beds in that vicinity. The dip in the rock at the point where No. 6 was located is at least 25 feet, Mr. M. holding to the idea, from his knowledge of Geology, that the same dip or basin in the rock would be found in all the sand rocks, and in the third sand oil would be found. Singular as it may appear his theory held good through all the different strata of rock to the depth 1,280 feet, at which depth oil was struck. By his superior knowledge of Geology, and in the face of sharp criticism by skepties and disbelievers, Mr. Mills has proven his theory correct and advanced the cause of science to a considerable extent .-The oil is of a beautiful amber color, and both wells have flowed ell in small quantititles several times daily. The third or oil bearing rock is found to be more purous, with less gas, than the Armstang Run sand rock.

Another interesting fact in regard to these wells is that more feet of casing was put in each than to any drilled well in the world. No. 6 is 1,280 feet deep, and 360 fret of casing was used. No. 7 is 1,400 feet deep, and 500 feet of casing was used. Not a drop of water was discovered in either well below the casing. We are indebted to Mr. N. B. Parker, who had the contract him in his little bed" in the toek-up, to enfor drilling the wells, and successfully car- able bim to sober up.

ried out said contract on both wells. Mr. P. is a resident of this place, and has been engaged in drilling oil wells for nearly ten POATS.

THE PHYROLEUM TRADS.

We do not bear so often as formerly' that ome fortunate individual has "struck lie." in a well that yields a thousand or more barrels per diem; but the total production of petroleum is steadily increasing, nevertheless. Oil has already become a staple export, ranking in impertance next to cottob and wheat. The extent of territory in which it may be profitably sought for is much greater than was formerly supposed andithe business of "boring" for the valuable fluid, instead of being conducted on the bap bozard principle which was in vogue in the earlier days, has now become as legitimate as any other branch of industry. Frovi. dence and perseverence are the essential elements of success in this, as in every other evecation.

It is not a pleasant local reflection, in view of these facts, that the business of refining petroleum has been almost entirely diverted from Buffalo to Cleveland and New York. Several refineries were built in this city within a short time of the discovery of petroleum in Peansylvania, but the experiment was not attended with suc cras. Siz; years ag o there were about a dozen reaneries here, nine in Cleveland, and none, we believe, in New York .-Te-day there are four in Buffalo, one hondred and eighty in Cleveland and about one hundred in New York. The refining interest of Cleveland is so extensive that the price of refined oil is dictated, and the business is virtually controled in that city. This is a very remarkable fact, because the crude oil which is refined at Cleveland is tiret transported a long distance away from the principal markets; and of course it must pay for the additional rail transportation. The oll trade, however, is indirectly of great importance to this city. Our manu facturers annually construct a large number of engines, iron tanks, pipes, etc., for the oil regions.—Buffalo Commercial.

THEATRE. - A large and appreciative au dience was in attendance at Sobel's Opera House, last evening, to witness the performance of the beautiful drama of "Nita; or, Woman's Constancy," by M'lle Zoe and her excellent company. In the character of Nita, Zoe fully sustained her old-time reputation as being a bright particular star in the fheatrical firmament. Meeker as Leo; Fannin as Michael O'Day; Gregory as Ramble, and in fact all the characters were well sustained throughout. Miss Minnie Florsace faitly took the house by storm la her character songs.

This evening will be produced the great military drama of The French Spy, introducing M'ile Zon's terrific broad-sword combat, Zoe taking the character of the Spy, and the entire company in the cast. Concluding with a maring farce. Everybody should attend.

CARD.

In retiring from the Retail coal trade at this place, we take this occasion to return our thanks to our former patrons, and recommend them to our successors, Mesers. Burton & Kooker, who will continue the business at the old stand. Parties holding claims against us are requested to present them at once, and those on the other side of the house will please remember that we love to see our friends.

CODINGTON & CORNWELL.

In the Pitteburgh Commercial's account of the recent boller explosion, we find the following singular statement in regard to the death of Mr. Charles Tillinghast:

Mr. Charles Tillinghast, who was a large-framed, fleshy man, was blown fully two hundred feet down the side of the hill. When picked up, just two slight marks were found on his body. His body remained warm for several bours, and at nine o'clock Saturday night warm blood exuded from his ears. Some of the physicians in attendance contended that he was merely in a state of coms, but up to this hour there has been no signs of breathing, and his death is conceded.

The Haskell & Co. well at Pithole is now yielding 82 barrels of oil per day, actual measurement, an increase within a few days of nearly 26 barrels per day. A number of new wells are in various stages of completion, and the prespects are good for the striking of other good wells. Among the heavy operators at present engaged in developing at Pithole are Philips Bros. of this place, and Fisher Bros of Oil City. A cerival of the oil business in that place is confidently expected.

Thos. Malloy, Esq., one of the City Fathers, got drunk last evening, and rested bis weary bones, or rather the police "put BOSTOR BANK DEPALCATIONS.

A CARRIED STEALING \$55,000 AND TELLER \$5,000-THE SHARP PRACTICE OF A SKILLED ACCOUNTANT.

From the Boston Advertiser, Feb. 24.

The report, published a few days ago, of the discovery of dell squescies on the part of some of the officers of our national banks, appears to have bad foundation in fact, and yesterday all mystery was dispelled. There are two cases, one in Webster National Bank, and the other in the North National Bank. The defaulter in the first care in Ellery C. Daniel, the cashier and discount clerk, and the amount of money taken about \$55,000. He began to abstract funds a few years ago to cover losses in speculation. and has continued the practice since as occasion demanded, but owing to his skill as an accountant and his double position in the bank was enabled to avoid detection .-A short time age, Mr. Ransom, United States bank examiner, and Mr. J. J. Eddy, his assistant, made their usual examination of the bank, anticipating the time a few days. This unexpected visit and the searching investigation which was made, combined to show Ithat there was a deficit, and when the charge was made Mr. Daniel admitted that the fands of the bank were not intact. It is stated that one method adopyed by Mr. Daniel to cover up a loss was to write a letter to the corresponding bank in New York, stating that such funds had that day been remitted to them for the account of the Webster National Bank. The letter was duly copied, but the original was never sent. The ontside coverings of notes which bad been left for collection were atteced, and the dates carried forward, and in one or two instances amounts paid in on notes left for collectiod were not credited to the secounts of the depositors, and were used as funds on hand, thus deceiving the examiners and directors.

The delinquency is said to have been oc. essioned by unsuccessi al speculations about four years ago, when, in the hope of retrieving losses, or to mest pressing obligations which would entall losses if unfulfilled the money of the bank was temporarily

The other case is a deficit in the accounts of the receiving teller of the North National Bank, Mr Henry W. Pitman, amonating to about \$5,000. Mr. Pitmag bes made full scknowledgment of his "delinquency."

We learn that the new well on the Armstrong farm, Pleasautville, which was reported as yielding 15 barrels per day, has increased to sixty. The oil is pumped from what is known as the sixth sand rock. Important results are auticipated from this

F. H. Bruggins, Esq., of the Mercer Dispatch, has sufficiently recovered from his recent filness to be able to visit his friends

Nathan B. Greeley, nephew of Horace Greeley, was killed Feb. 21st, in Wayne township, Erie Co., by a falling tree, while in the woods chopping.

The English Opera at Titusville, last evening, was a grand success.

Kenyon's New Double Acting Oil Pump for Pumping Oil or Water in Deep Wells.

Kenyon's New Double Acting Oil Pump is acknowledged to be the best pump now in use. One of its leading features is that it not only produces a continuous flow of oil or other fluid, but that it creates and it not only produces a continuous flow of oil or other fluid, but that it creates and sustains a constant and powerful suction, by means of which the seams or velos of the well are in a great measure cleared of parafine and other obstructions, and the oil in the velus is drawn towards the well. It has been ascertained by actual test that the use of this pump causes a gradually increasing flow of oil. It is well known by oil operators that this improvement is of great value, and one that his been long sought for. The ablest mechanics of our country have for years been at work trying to find out some new and untried plan to prolong the life time of an oil well; and nothing yet to our knowledge has been brought before the public that in any way equals the power of the Kenyon Pump, experience having thaught that it is the long continued suction that has the power to keep up and increase the production of oil wells. Oil operators are relerred to Mr. Geo. Boniton, Superintendent of the Columbia Farm, for information in regard to the practical workings of the Kenyon Pump, We append the following testimonial from the madagers of the Columbia Farm:

the Columbia Farm:
OFFICE COLUMBIA OIL CO. Columbia Farm, Jan. 28.

Columbia Farm, Jan. 28.

MR. H. K. KENYON:

Dear Six:—We are using your [Double Acting Oil Pumps in three of our oil wells and take pleasure in stating that we are getting more oil and gas from each of them than was previously obtained by the use of working barrels. We believe your oil pump to be the bast in the

working barrels. We working barrels. We to be the best in use.

Respectfully yours,
G. W. Boulton, Sup't.
