Another Valuable Invention.

GATES' BACK-SUCTION PREVENTOR FOR OIL WELLS, patented August 15, 1871, which entirely prevents the leakage of air to the well, while the tubing is being drawn. It is a well known fact to all operators, that upon wells where this Preventor is used it is necessary to preserve as much of a perfect vacuum as possible, and that no air should be let into the well at any time, when it can possibly be avoided; consequently, whenever the tubing is drawn from a well it is the cause of an injury to it, as the sucking back, being then necessarily checked, the air immediately rushes back between the tubing and casing, into the well going into the oil rock and gas veins, and consequently causing the oil and gas to rush back to a great distance. So much so, that it almost always takes several days after pumping is resumed for a well to be brought back to its former condition, and oftentimes it takes several weeks; and quite frequently wells have been almost completely ruined by the air being thus let in while drawing tubing.

The BACK-SUCTION PREVENTOR is attached to the stuffing box and works in such a way that it completely shuts up the space between the stuffing box and tubing so effectively that not a particle of air can get through at any time while the tubing is being drawn and replaced. It supplies a want long felt, and is, without question, one of the most valuable inventions of the day, to the owners of oil wells. No well should be without it, as it often times saves ten times as much by one using.

It is manufactured at the FOUNDRY AND MACHINE SHOP OF ANDREWS & CO., TIDWORTH, PA., and for sale by Hardware Dealers.

Tidworth, Pa., March 28, 1872—Jaw 2m.

GATES' BACK-SUCTION PREVENTOR.

MEANS, ANDREWS & CO.—Philadelphia—Having used one of GATES' BACK-SUCTION PREVENTORS, I can confidently recommend the same to all who have occasion to use the same, as the best and most reliable ever made for oil wells. Our own was so small that it barely paid to run it. After using one of GATES' BACK-SUCTION PREVENTORS the greater was impressed in a word, "perfect." It saves us one day's pumping, and saves us the well, which is hardly paid for in the two weeks before we could restore it to its former condition after drawing tubing. This is entirely obviated by the use of the Preventor.

HARRY FRANKS & CO.,
TIDWORTH, PA. 2, 1872.

MEANS, ANDREWS & CO.—Philadelphia—Having used the utility of GATES' BACK-SUCTION PREVENTOR, we consider them one of the most useful inventions ever made for oil wells, and we think we are justified in saying that, having used one of our wells, we can now draw tubing, and when they are replaced, the wells produce the same as before drawing, thus showing that the Preventor effectively prevents all traces of air.

Yours respectfully,
HARRY FRANKS & CO.

TIDWORTH, Pa., 9, 1872—Jaw 2m.
