Another Valuable Invention.

GATE'S BACK-SUCTION PREVENTOR FOR OIL WELLS, patented August 15, 1871, which entirely prevents the ingress of air in oil wells, while the tubing is being drawn. It is a well known fact to oil operators, that upon wells where Gas Pumps are used it is necessary to preserve as nearly a perfect vacuum as possible, and that no air should be let into the well at any time, when it can possibly be avoided; consequently, whenever the tubing is drawn from a well it is the cause of great injury to it, as the sucking bar, being then necessarily opened, the air immediately rushes back between the tubing and casing, into the well going into the oil rock and gas veins, and consequently causing the oil and gas to rush back to a great distance. So much so, that it almost always takes several days after pumping is resumed for a well to be brought back to its former condition, and sometimes it takes several weeks; and quite frequently wells have been almost completely ruined by the air being thus let in while drawing tubing.

The BACK-SUCTION PREVENTOR is attached to the stuffing box and works in such a way that it completely shuts up the space between the stuffing box and tubing so effectively that not a particle of air can get through at any time while the tubing is being drawn and replaced. It supplies a warm, long felt, and is, without question, one of the most valuable inventions of the day, to those engaged in the oil business. No well should be without it, as it often times saves ten times its cost by once using.

It is manufactured at the FOUNDRY AND MACHINE SHOP OF ANDREWS & CO., TIDIOUETTE, PA., and for sale by Hardware Dealers.

Tidiouette, Pa., March 23, 1872.—Law 111.

GATE'S BACK SUCTION PREVENTOR.

Messrs. Andrews & Co.—Gentlemen:—Having used one of GATE'S BACK-SUCTION PREVENTORS, I can confidently recommend the same to all who have occasion to use the same, as the best Preventor of Back suction on Oil Wells. Our well was so small that it hardly paid to run it. After putting on one of GATE'S BACK-SUCTION PREVENTORS the production was increased to a good paying well. Before we got the Back Section Preventor on the well, we invariably had to pump the well two weeks before we could restore it to its former production after coming in. This is entirely obviated by the use of the Preventor. RAZZ, PEKING & Co.

Tidouette, Feb. 3, 1872.

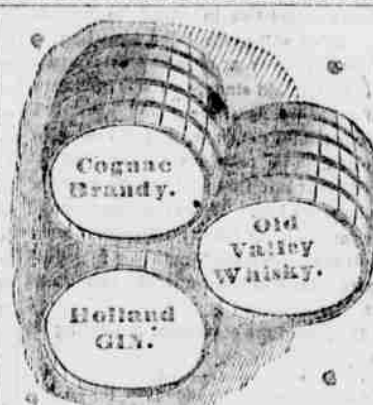

Messrs. Andrews & Co.—Gentlemen:—Having tested the utility of GATE'S BACK-SUCTION PREVENTOR, we consider it one of the most useful inventions ever made for oil wells, and we think we are capable of judging of them, having three on our wells. We can now draw tubing, and when they are replaced the wells produce the same as before drawing, thus saving the Preventor effectually prevent all ingress of air. Yours respectfully, BACON & HONER.

Messrs. Andrews & Co.—Gentlemen:—This is to certify that I have used one of GATE'S BACK-SUCTION PREVENTORS, on the Lee & Hill Land Lease, Encanto Hill, and would not do without it at any price, as it will do all and more than it is recommended to do. So I can cheerfully recommend it to all Oil Operators who have any Back suction Wells. Yours, &c., JOHN MIZENS.

Tidouette, Feb'y 9, 1872.—Law 50.
