### It is also for sale at the Hankwire Stare of Geo. W. Winsor, Petroleum Centre, Pa.

July 12-tf.

### Another Valuable Inven-

tion. CATE'S BACK SUCTION PREVENTOR FOR OIL WELLS, patented August 15, 1871, which en-tirely prevents the ingress of air in oil wells, while the tubing is being drawn. It is a well known fact to oil operators, that upon wells where Gas Pumps are used it is notessa, y to preserve as nearly a per-fect vacuum as possible, and that no air should be let into the well, at any time, when it can possibly be avoided; consequently, whenever the tubing is drawn fr m a well it is the cause of great injury to th, as the stuffing box, being then necessarily opened, the air immediately rushes back between the tubing and casing, into the well going into the eil rock and gas veins, and corsequently causin, the oil and gas to rush back to a great distance. So much so, that it almost always takes several days after pumping is resumed for a well to be brought back to its former condition, and oftentimes it takes several weeks; and quite frequently wells have been almost completely rained by the air being thus le in while drawing tabling

The BACK-SUCTION PREVENTOR is attached to the stuffing box and works in such a way that it completely shuts up the space between the sluffing lox and tubing so effectually that not a pyrticle of air can get through at any time while the tabing is being drawn and replaced. It supplies a want long telt, and is, without question, one of the most val-uable inventions of the day, to those eagrifed in the oil business. No well should be without it, as it of-ten times saves ton times i.s cost by once using

To It is manufactured at the FOUNDRY AND
MACHINE SHOP of ANDREWS & CO., TIDIOUTE, PA., and for sa e by Hardware Dealers.
Tidloute, Pa., March 28, 1872—taw 3m.

## CATES' BACK SUCTION PRE-VENTOR.

MESSES. ANDREWS & CO.—GENTLEMEN:—Having used one of CATES BACK SUCTION PREVENTIONS:—It can confidently recommend the same to all who have occasion to use the same, as the best Preventor of Back Suction on Oil Wells. Our well was so small that it hardly pald to run it After parting on one of CATES BACK SUCTION PREVENTORS the production was increased to a good paying well. Before we put the Back Saction Preventor on the well, we invariably had to pump the well two weeks before we could rectore it to its former production after drawing tabing. "Dis its entirely ohvlated by the use of the Preventor.

HART, PRIKINS & CO.

Messes Andrews & Co.—Having thoroughly tested the utility of CATES BACK SPUTION PREVENTOR, we consider them one of the most useful inventions ever made for oil wells, and we think we are capable of judging of them, having three on our wells. We can now do saw bing, and when they are replaced the wells produce the same as before drawing, thus showing that the Preventor effectually prevents all ingress of air.

You'r respectfully,

Bacon & Rioney.

Massus Andrews & Co.—Cents:—This is o certify that I have used one of OATEN BACK SUCTION SHEVENTOHS, on the Lee & Hi hiand Lease Economic Hill, and would not do without it at any price, as it will do all and more than it is recommended to do. Ind I can cheerfully, recommend it to all Oil Operators who have any Back Suction Wells.

Yours, &c., John Myres. Tidloute, Feb'y 8, 1872 — taw 8m.
