SEWING MACHINES-"THE FLORENCE," SEWING MACHINES—"THE FLORENCE."

—The sewing machine business has grown to gigantic proportions since the period when Hewe, the inventor, first set the ball in motion. Many patents have been applied for, and the government has recognized a considerable proportion of them as meritorious and worthy of sanction. At the head of the improved machines stands "The Florence," the general agency of which is at No. 630 Chestnut street, and where exquisite specimens of the of which is at No. 650 Unestinut street, and where exquisite specimens of the workmanship of the machine may be critically examined. "The Florence" is free from many objections to which other machines are liable. Its inventor adopted the lock sticch in preference to any other, and lock stitch in preference to any other, and then added the knct, double lock and

then added the knot, double look and double knot, either of which may be chosen by the operator to suit any grade of fabric. Thus four different stitches are made with the stitches ar the ease with which other machines make one. Some of its advantages are concisely set forth thus: The needle is easily adjusted, and does not skip stitches. It is almost noiseless; and can be used where quiet is necessary. Its motions are all positive there are no springs to get out of order, and its simplicity enables any one to operate it. It does not require finer thread on the under than for the upper side, and will sew across the heaviert. than for the upper side, and will sew across
the heaviest seams, or from one to more
thicknesses of cloth, without change of
needle, tension, breaking thread, or skipping stitches. The Hemmer is easily adjusted, and will turn any width of hem desired. It will hem, fell, bind, gather, braid,
quilt, and gather and sew on a ruffle at the
same time. It has no springs to get out of
order, and will last a lifetime. Who can
doubt the advantages of "The Florence."
