BEEF STEWED WITH ONIONS .- Cut some tender beef in small pieces, and season it with pepper and salt, slice some onions and add to it, with water enough in the stewpan to make a gravy; let it stew slowly till the beef is thoroughly done, then add some pieces of butter rolled in flour to make a rich gravy, Cold beef may be done in the same way only the onions must be stewed first and the meat added. If the water should

stew away too much put in a little more. VEATA POT PIE.—Cut up some veal (the best part of the neck is preferable,) wash and season it with pepper and salt; line the sides of the pot with paste, put in the yeal with some pieces of paste rolled out and cut in squares, cut up some pieces of butter rolled in flour and add to it, pour in as much water as will cover it, and lay a sheet of paste on the top, leaving an opening in the centre; put the lid on the pot and put it over a moderate fire, let it cook slowly till the meat is done; place the soft crust on a dish, then put the meat over it, and on the top lay the hard crust, with the brown side up. Serve the gravy in a boat. To have the crust of a pot pie brown, set the pot on a few coals before the fire and turn it frequently.

GIBLET PIE - Wash and clean your giblets, put them in a stew-pan, season with pepper, salt and a little butter rolled in flour, cover them with water, stew them till they are very tender. Line the sides of your pie dish with haste, put in the giblets, and if the gravy is not quite thick enough, add a little more butter rolled in flour. Let it boil once, pour in the gravy, put on the top once, pour in the gravy, put on the top crust, leaving an opening in the centre of it in the form of a square; ornament this with leaves of the paste. Set the pie in the oven, and when the crust is done take it out.

MINT SAUCE.—Choose some young mint, pick and wash it; chop it very fine, and pour on enough vinegar to wet it. To every gill of vinegar allow two gills of brown sugar. The sugar should be dissolved in the vinegar, then poured on the mint.

CHRISTMAS PLUM PUDDING FOR A LARGE FAMILY.—Half a pound of beef suet, one pound of flour, half a pound of dried currants, half a pound of stoned raisins, two eggs, nutmeg and cinamon to the taste, half a spoonful of salt. Shred the suet, chop it fine, and rub it through the flour. Wash, pick and dry the currants; seed the raisins, mix the currants and raisins together, and dredge over them as much flour as will adhere to them. Beat the agast ill they are very to them. Beat the eggs till they are very thick and light, and add enough milk to form a batter—stir in the eggs, then the spices and salt, and lastly the fruit. Dip your pudding bag into cold water, turn it wrong side out and flour it well, then turn it back again, pour in the batter, tie the mouth of the bag with a strong string, but take care to leave a space sufficient to allow the pudding to swell. Have ready-a pot of boiling water with a plate in the bottom, to prevent the bag from touching the bottom of the pot, put in the pudding and let it boil three hours and a half. Keep a kettle of boiling water to fill up the pot as many he required. the pot as may be required. When the pudding is done, take it out of the pot, dip it for an instant in cold water, untie the bag, and turn it out on a dish. To be eaten with sweet sauce.

CHRISTMAS FRUIT OR PLUM CAKE. CHRISTMAS FRUIT OR PLUM CAKE.

One pound of flour, half a pound of sugar, half a pound of butter, six eggs, one pound of dried currants, washed, picked, and wiped dry, one pound of raisins, washed, picked and stoned, a quarter of a pound of citron, cut in small slices a tagspoorful of crown. slices, a teaspoonful of ground cinnamon, one nutmeg, flavor with rose-water or lemon-juice. Stir the butter and sugar together till it is very smooth and light. Whisk the eggs till they are as thick as batter, and stir into them the butter and sugar alternately with the flour. Add the spice very gradually, then the fruit, which must be floured before it is put in, or it will settle at the bottom of the cake and burn. Beat the whole very hard for or iron pan, butter the pan, line the bottom and sides with very thick or brown paper, butter the paper well, and pour in the mixture. Bake in a moderate oven five hours.

BUCKWHEAT CARES.—One pint of buckwheat meal, one quart of water, salt just to taste, one gill of home made yeast. Mix the water-which should be lukewarm if the weather is cold-with the meal, add the salt and yeast, beat it well; when light, bake them on a griddle. Grease the griddle, pour on a little of the batter, spread it so as to form a cake about the size of a breakfast plate. The cakes should be very smooth at the edges. When they are done on one side turn them, when brown on both sides, put some butter on the plate, place the cake on it, butter the top, bake another and put it on, butter it and send them to the table. Buckwheat cakes are much better if they are sent to the table with only one or two on a plate.

CHARCOAL.—All sorts of glass vessels and other utensils may be purified from long-retained smells of every kind, in the easiest and most perfect manner, by rinsing them out well with charcoal powder, after the grosser impurities have been scoured off with sand and potash. Rubbing the teeth, and washing out the mouth with fine charcoal powder will render the teeth beautifully white, and the breath perfectly sweet, where an offensive breath has been owing to a scorbutic disposition of the gums. Putrid water is imme-diately deprived of its bad smell by charcoal. When meat, fish, etc., from intense heat or long keeping, are likely to pass into a state of corruption, a simple and pure mode of keeping. a simple and pure mode of keeping them sound and healthful is, by putting a few pieces of charcoal, each the size of an egg, into the pot or saucepan wherein the flesh or fish is to be boiled.

LINEN RAGS should be carefully saved for they are extremely useful in sickness. If they have become dirty and worn by cleaning silver, etc., wash them and scrape them into lint.

ESSENCE OF CELERY.—This is prepared by soaking for a fortnight a half ounce of the seed of celery in a quarter of a pint of brandy. A few drops will flavor a pint of soup or broth, equal to a head of celery head of celery.

To CLEAN WHITE OSTRICH FEATH-ERS.—Four ounces of white soap cut small, dissolved in four pints of water, rather hot, in a large basin; make the solution into a lather. Introduce the feathers, and rub well with the hands for five or six minutes. After this soaping, wash in clean water, as hot as the hands can bear. Shake until dry.

A Singular Phenomenon of Nature-Boiling Springs Resembling the Gey-sers of Iceland-The Mines and their Yield.

special Correspondence of the De roit Free Press. STAR CITY, Nevada, Nov. 12.—In my letter of the 9th inst. to the Free Press I promised to give you a description of our boiling springs. These springs are situated about twenty miles from Carson City, which is the capital of the State. They are called "Steamboat Springs," from the noise they make, which sounds like several steamers discharging steam. These springs cover an area of about three acres. The water is boiling hot, and the escaping steam can be seen for several miles, before sunrise, and the atmosphere in the vicinity is filled with the small of sulphur. the smell of sulphur. A sinful indivi-dual once remarked, when near these springs, that he did not wish to approach very near, as the lower regions could not be far off, and he had not made his confession, and was not ready to go. At the springs are bath-houses, where at least two hundred patients are accom-modated. There are also two fine hotels. The water cures the rheumatism effectually. There are crevices in the rocks where the water can seen boiling at a depth of 30 feet. Here is also a spring which is called the breathing spring. This spring is shaped much like a well. The water recedes to the depth of ten or twelve reet, and remains calm for five minutes, and then commences to boil, and rises until it shoots in the air above ten feet, and in five minutes it begins to recede. I tried its operation for at least half an hour. I have no doubt but years ago the whole country was subject to volcanic eruptions, for lava can be found all around these springs. Steamboat Springs are becoming quite noted as one of the greatest curiosities of the age, and of the greatest curiosities of the age, and they are yearly visited by hundreds of tourists. Lady Franklin, the widow of Sir John Franklin, has written much about these springs. She visited them five years since. There are many other boiling springs in other portions of the State, but none of the magnitude of State host Springs.

State, but none of the magnitude of Steamboat Springs.

The city of Star contain alout 6,000 inhabitants. It is in Star District, Humboldt county, and its main street is the overland stage road. Daily the stages pass to and fro with the mails from New York to San Francisca and the felerate. York to San Francisco, and the telegraph wires give us news at all hours from every accessible point on the globe. The discovery of mines in this country caused thousands to visit us; towns were built, mills erected, and at this early day we are now exporting from Humbold to unty alone the amount of \$800,000 in silver bars each month. There are at present 16 mills running at Star city, using 115 stamps. In addition to these, there are now in process of erection seven other mills, making a total of 22 mills. Scarcely a week passes in which we do not hear of the purchase of some mine by Eastern or English capitalists, who invariably take steps for the erection of a suitable mill on their mine. The Rothchilds own largely in our homes. The Humphrey mill of Star City, gave as their results of crushing 693 tons of ore, \$159,-639 65, being an average of \$230 36 per ton. As an evidence of the steady increase in the production of silver in Nevada, we submit the statistics of the yearly report ending Sept. 1st, 1866, of the amount produced in Star District. These statistics are obtained from the city assessment roll, amounting in round numbers to \$4.168.000. The wealth of this region is almost inestimable, and the receipts of some of the mining companies put the riches of some of your oil wells to blush. The mineral wealth of Nevada has induced the formation of many new companies in most of your leading cities on the Atlantic coast. The State of Nevada, with a population of 40,000 inhabitants or less, took out of her mines in gold and silver bullion during the year 1864, as is shown by the statistics of exports, more than \$30,000,000.

REMUNERATION OF MECHANICS.—An English paper says: "The rise of wages amongst the mechanic class has been steadily going on for years, owing to the power of co-operation; and though the consequences have not yet been so marked on the productive power of the country as might have been expected, yet causes are in active operation which must soon seriously interfere with that description of labor which has to come into active competition with the labor of other countries. Recently, orders to a large extent for locomotive engines have been executed in Belgium and Switzer-land, that formerly would have been ex-ecuted here; and it is believed the day is not far distant when foreigners will undersell us on our own soil, if they are not actually doing it now. This high rate of remuneration is telling on the London shipbuilding trade, for on the Thames no fewer than 27,000 men connected with that craft are at present out of employment. The masters cannot compete with the low scale of wages paid to workmen in other countries, and their own men will submit to no reduction. No strong er illustration need be required of the constant operation of that economic rule -the existence of which Trades' Unions sometimes ignore—that the law of supply and demand regulates wages. A few years ago, on the Mersey, shipwrights were paid at the rate of a guinea per day, but the law in question soon worked a change. If these 27,000 men would re gard half a loaf as better than none, the English employer might still be able to keep his head above water."

CASTOR WHEELS.

CASTOR WHEELS.

TOR HEALTH AND STRENGTH USE CAPPELY WELL. & CO.'S PATENT GLASS CASTOR WHEELS.

These wheels are designed for Planos, Bedsteads, &c. We claim that they give to Planos a greatly increased force of sound, without detracting from the harmony and melody of the instrument, rendering every note more distinct to the ear. This is so apparent that they are now being applied by many to these valuable musical instruments. Dr. Valentine Mott, previous to his death, pronounced the Glass Castor Wheels an invaluable invention for bedfast invalids, whe are guarded against the damp floors after undergoing the process of cleaning, or where dampness is produced from any other cause. Aside from this, Housekeepers are relieved from the dread of having their carpets cut or torn, as frequently happens from those now in use, often caused by a rust, which adheres with glue-like tenacity. No such annovance can possibly proceed from the Glass Castor Wheels, as we all know that glass is non-corrosive. There are no rough or unfinished edges to the Glass Wheels, such as we often find in those of iron, and the latter, though smoothly finished, will sook rust, from the dampness of the atmosphere, if nothing else, producing roughness on the surface, or edge, while the former will always maintain the amoothness of glass, just as they are finished.

By sleeping upon glass wheels you retain all the electricity you had in your body on retiring, and you get up in the morning feeling as fresh and active as a young mas. Glass being a non-conductor, the electricity gained wallein bed cannot pass off. Ask your doctor what he thinks of the Glass Castor Wheels.

Ask him if all diseases, with the exception of chronic diseases. are not caused from the want of electricity. We have a man in our place whom the doctors pronounced past curing, with the inflammatory freumatism. The wheels cured him in less than four office. No. 203 Race street, Philadelphia, or at our Factory, as westylie, New Jersey where we have some sixty hands employed in the hands employed in the manufacture of the wholes for Wheels.

100 will be paid to any one who will say they have not received any benefit or relief after using Capewell & Co.'s Patent Glass Castors. A sample set (4) of the Wheels sent to any part of the United States, on recipt of \$1 50.

J. B. CAPEWELL & CO.'s 904 522 No. 250 Bacs skreet.
