THE ENGLISH MONEY MARKET.

Effect of the Influx of Bullion---The Harvest.
[From the London Times (city article), June 24.] Neither the favorable harvest weather nor the arrival of a further quarter of a million of gold rom America, have had the slightest influence from America, have had the slightest influence on the funds. The public, who purchased largely a month ago, are unable to resist the temptation to realize the five-per cent. profit that has accrued, and are satisfied for the present to let the proceeds lie idle at their bankers', who in their turn find it difficult to obtain employment for it at two per cent. Thus far it is evident the revival of financial confidence has exprest made any progress either confidence has scarcely made any progress either in Paris or London. The unparalleled accumulation of bullion, and the low rates of discount, have rendered it impossible to obstruct a certain advance in the prices of the funds; but the inherent feeling of distrust is almost as strong as ever, and consequently, when holders discover that they can actually obtain a fair profit on their that they can actually obtain a fair profit of their original investments, they rush to secure it as if there could be no hope of its permanence. A similar tendency pervades every department of trade, and by checking all orders for foreign

goods, except such as are indispensable increases the prospect of a large continuance of the influx of bullion. The possibility of another indifferent harvest constituted the only apparent contingency that might be likely to turn the tide, and now that the promise of abundance seems to be daily strengthened, the problem as to the point the plethora in the money market is likely to reach, and the mode in which it will ultimately find development, becomes more than ever inter-
