pon this principle.

the illustration of his subject, by which the interest and instructiveness of his course may cent communication to the Academy of Sci-ences, upon American Petroleum, states that and screen, enough diffused light from an centes, upon American Petroleum, states that petroleum increases in bulk by one hundredth of its volume for every ten degrees, cenned in screen, enough diffused light from an open window or gas burner may be admitted, of its volume for every ten degrees, cenned in screen, enough diffused light from an open window or gas burner may be admitted, of its volume for every ten degrees, cenned in screen, enough diffused light from an open window or gas burner may be admitted, of its volume for every ten degrees, cenned to give every facility to the class for taking open window or gas burner may be admitted.

Owing to the numbers of accidents caused by the variations of the compass, especially now so much more iron is employed in ship-ict, are yet clearly defined upon the screen.

We speak here from experience, having between this plan during the past winter, at the University of Pennsylvania, with entire employed this plan during the past winter, at the University of Pennsylvania, with entire employed this plan during the past winter, at the University of Pennsylvania, with entire of the film in all white parts of the picture, combined with great opacity in the dark lines, is underested by Mr. Walter W. Evans, Presiden of the Spuytem Duyvil Iron we can speak most highly of the very numerous specimens furnished us by O. H. At the time of the sun's meridian pastor, which high is the present themselves.

At the time of the sun's meridian pastor, which would net seem worth the time and cost of photographing.

In many cases, however, it becomes designed the view of the indexion of the shadow cast by the wire on the compast at the unit of the central Pacific parts of the direction and that of the north and cost of photographing.

In many cases, however, it becomes designed the view of the shadow cast by the wire on thing to the central Pacific parts of the prepare some simple drawing or diagram, which would net seem worth the time of the card will give the local attraction and variations of the cicated to the theory aristio

tunnel happens to face eastwards, and the interior is somewhat illuminated at sunrise. Advantage was taken of this, and by means of a large mirror, the light was reflected equally and gradually over the whole of the interior, whilst the picture—which was exposed fifteen minutes in the camera—was being photographed.

New Invention for Watering and Cleaning the cause—the desired figures.

New Invention for Watering and cleaning the cause—the connected with the water mains, for the purpose of watering and cleaning the cause—the cause purpose of watering and cleaning the causeway. The work is being done with the sanction of the police board, by Mr. Sim, who has patented the invention that is now to be put on trial practically. The pines are pared and exhibited at one of the meetings of the Institute. The plan to be adopted is as who has patented the invention that is now to be put on trial practically. The pipes are malleable iron, about three inches in diameter, and are laid down immediately outside the pavement on one side of the street only. The water is to escape by openings of 1-16th inches in diameter, drilled about a foot apart. By means of this arrangeemnt Mr. Sim expects to be able to lay dust at a much cheaper rate than by the old water-butt process, and he will use it in cleansing likewise in conjunction with the scavenger's broom.

ITALIAN INDUSTRY.—Great efforts are now Tranan Industry.—Great efforts are now being made to develope national industry in Italy, and to put manufacturers there on a Italy, and to put manufacturers there on a level with those of other countries. At Lodi, upwards of 100 power looms for cotton and woolens are being fixed, and will soon be ready for work. A like number are being added to a factory at Monza, near Milan. Three factories are being established at Novara, Ivrea, and Belluna. At a factory at Monza in the Eriuli several power looms.

Three factories are being established at Novara, Ivrea, and Belluma. At a factory at Monza, in the Fritul, several power looms are being added. An extensive factory is being established at Pordenone. At Piazzola, in the Fritul, several power looms are being added. An extensive factory is being established at Pordenone. At Piazzola, Signor Camerini is establishing a spinning mill for fax and wool. The well-known woolen factory at Schio, of Signor Rossi, in also being enlarged, and various new man extensive factory is being enlarged. During the last two months a good deal of English and Belgian machinery has been sent to Italy. The Exhibition of National Industry, now open at Turin, is a great success, and great crite its due to the committee of the Lega Pacifica (a league for the encouragement of national industry), who organized it on so short a notice. This exhibition will remain open until the end of June.

The Rahibition will remain open until the end of June.

The Rahibition will remain open until the end of June. ELECTRO-BRONZING, FOR RAILINGS, GARDEN
STATUARY, &c.—Monsieur Henri H. Lovie, of this city, submitted at the last meeting of of this city, submitted at the last meeting of olived some days since. When my assistant.

SIMPLES STATURED BY OF THE CONTROL OF THE CON ployed some days since, when my assistant, bill was proposed Mr. Gladstone had declared to Mr. Alex. Outerbridge, Jr., suggested that himself and others, that the Irish question must be specimens of electro-bronzing. Bronze, brass, German silver or any desired composite or simple metal, can (as is fully demonstrated stones, and employed in like manner.
This plan on trial proved perfectly feasible, by the specimen submitted, and by manufacturers in Berlin and Paris) be closely and perfectly deposited upon iron. The difficul-

facturers in Berlin and Paris) be closely and perfectly deposited upon iron. The difficulties to be overcome are the proper preparation of the iron, so that every atom of surface presents a galvanic pole. To do this, every grain of sand and other impurity has to be removed, which is accomplished by simple timmersion in a chemical solution.

The plan of that proved perfectly leastlet, leading the proved perfectly leastlet, leastlet, leading the proved perfectly leading the proved perfectly leading the proved perfectly leading the proved leastlet, leading the proved perfectly leading the proved leastlet, leading the proved perfectly leading the proved leastlet, leading the pr to be removed, which is accomplished by simple immersion in a chemical solution. Specimen No. 2, an iron star, showed the effect; the holes in this piece of rough iron castings were moulding sand, and it was upon close examination, seen that no matter upon close examination, seen that no matter who cannot at page 300 of this journal.
