JEFFERSON MEDICAL COLLEGE.—The annual commencement exercises of the Jefferson Medical College were held this afternoon at Musical Fund Hall. A large audience was present, and the proceedings were enlivened with music. The Trustees and Faculty of the College were seated upon the platform, and the graduates occupied the front beaches in the hall.

The proceedings were opened with preven

front benches in the hall.

The proceedings were opened with prayer.
Hon. Edward King, LLD., President of the Institution, then conferred the Degree of Doctor of Medicine upon the following graduates:

Wright R. S. Wright, J. S. Yates, Edward. Yates, Edward.

Samuel H. Dickson, N. D., Professor of the Practice of Medicine, then delivered the valedictory address to the graduates. He opened with an appropriate reference to the retirement of Prefessor Robley Dunglison, who had been connected with the institution since its foundation and said. and said: 'The annals of our school contain no name more distinguished than that of Robley Dunglison; none more dear to those who have had the happiness to enjoy his society and profit by his wise counsels, his frank cordiality, his thindly and courteous manner."

The valedictorian then gave an interesting his-

The valedictorian then gave an interesting history of the progress of medical science. He said: "When I commenced the studies which mutually engage us, Laennec had just leaned his ear against a quire of paper rolled together and pressed upon the hollow thorax of a patient, and the Stethoscope has now grown into an instrument which discourses cloquent music to those who have learned its scale. Since, and indeed recently, we have Ophthalmoscopes and Laryngo-scopes, and Otoscopes, and Endoscopes, with which we watch the obscure changes which indicate disease. Most curious of all is the Sphygmograph of Marey, delicately telegraphing to us the movements of the heart itself; its eager throbbings; its keen and sharp convulsive contractions, and its slow and feeble undulatione, thus making clear the formerly doubtful indica thus making clear the formerly doubtful indica

tions of its pathological states.
"The Microscope, long known it is true, but only of late rendered satisfactory in its application to our needs, now yields us results not only wonderful but truly instructive, and assisted by the photograph, provides us with pictures of minute structure most interesting for us to observe and know Are you ready to exclaim that this is all trite and familiar to you? familiar to you? Eujoy it, then, employ it dili-gently, and thank those who have prepared for you such abounding and facile sources of scien-

tific acquisition.
"Nature concentrates her powers of evil and disperses them, still retaining their strength. The callperses incompilar retaining their strength. The acrid, acid juice of the gnat and the antithe deadly bite of the tetse fly; the sting of the wasp and bee, the venom of the cobra and the crotalus, are all comprised in small compass. All her contagious viruses have bid defiance to our powers of gious viruses have bid denance to our powers of detection; and the aërial poisons that spread abroad the pestilence "which walketh in darkness and destroyeth at noonday," are invisible and intangible. Savages have acquired the skill to boil down or evaporate vegetable extracts for truculent purposes, and even the Bushman is master of the life of his enemy or his game with the poisoned arrow.

master of the life of his enemy or his game with the poisoned arrow.

"Alchemists and chemists of the Middle Ages labored with the same flendish views, and we read mythical stories of their incredible success in the preparation of the aqua Tofana, and similar strange drugs. Shakespeare tells us of the "cursed bebenon" being poured into the ear of the royal Dane by his incestuous brother. But these delicate arts are in absyance, if not lost; and my Toxicological triend and colleague tells me that. cate arts are in abeyance, if not lost; and my Toxicological triend and colleague tells me that, after careful research, he can find on record but a single instance of murder through this tender organ. Enough in this way was done, when prussic acid was discovered—far too much for the interests of humanity when stry chnine and nicotine were added to the list.

"Here, again, we meet analogous compensation, which it will be difficult for you to appreciate adequately. In 1817, when I was sitting on the hard benches in Ninth street, listening to the Cloquent prefections of a Wistar, a Physick, and a Chapman, morphine was separated from the crude juice of the poppy, itself the kindest boon

ever deigned by Heaven to wretched humanity over deignes by Heaven to wretched infinitely in had, however, been encumbered with clinchons in powder and infusion, and decoction and the turb, and extract, for four years of practice in a malarial country, before chemistry, on which all arts and sciences depend for their development and progress, presented us with the invaluable alkaloid quinia, without which—as Sydenham most truly and pithity which—as Sydenham most truly and pithity said of opinin—modern medicine would be lame and crippled. You may imagine, for I cannot describe the difficulty with which our patients were induced to swallow the huge ligneous masses, the nauseous draughts, the boluses, still more difficult to retain, but indispensable to a cure; and then you will be ready to believe the stories of the old books, nay, of books not very old, for you will find several of them in Good's works, concerning fevers of ten, twenty, and even forty years' duration. Without the analysis which resulted in the procurement of this, and the similar alkaloids now in constant use, we should not have been prepared to avail ourselves of the latest therapeutical improvement—the method of hypodermic medication.

"You have doubtless heard me affirm what I believe to be true, that since Jenner's discovery

believe to be true, that since Jenner's discovery of vaccine, nothing has been done more important in the interests of afflicted humanity. It affords a glorious triumph over the greatest of physical evils—Pain. It gives us, too, an equal triumph over the sucering skeptic, who has been so long accustomed to express his dissent as to the efficacy of our remedies—the relation of cause and effect—the argument part has a country has a property and the country has a pr ant in the interests of afflicted humanity. It and effect—the argument post hoc propter hoc—on account of the lapse of time between the administration and the result. Now we have these connected as closely as the flash of the powder and the stroke of the bullet, not much less clearly than the roar of the thunder and the destructive

and the stroke of the build, not much less ctarly than the roar of the thunder and the destructive sweep of the lightning which just precedes it "
"Montell, in his 'History of the Estates of France,' mentions incidentally—'the virtues of vegetable sluples, certain of which, like mandragora, taken in infusion, throw a man into a sweet aleep, which makes him support, without pain, the operations of surgery.' One would think that the use of opium and of hashisch among the Easterns would have been a suggestion of anxithesia too clear to have been missed. So also we would say of alcohol, as soon as it was discovered. Nothing of the kind seems, however, to have been thought of until poor unfortunate Wells, experimenting with Davy's new gas, imagined that it might preserve the unhappy wretch, under his dentist's hands, from the horrible crash of extraction of a tooth. This succeeded—a little doubtfully and transiently as even now—but was loubtfuily and transiently as even now-but was found too transient and uncertain for a prolonged surgical operation. What a miserable disappointment to his bright benevolent hopes! Let us ment to his bright benevolent hopes! Let us pity and forgive his weakness in preferring death to the horrors of so great a failure. Morton, fol-lowing the same train of thought, made trial of ether—still so justly and highly valued. Then came a long series of experiments, which have finally placed chloroform, Simpson's treasure trove, at the head of this class of agents.

"You are happy in beginning thus late the practice of medicine and surgery—let me assure you you will never appreciate how happy, with all these weapons against that enemy whose name is legion, and whose sharpest and most poleoned dart is now blunted and met with an available

Professor Dickson closed his address by some Professor Dickson closed his address by some excellent advice to the young men who are now about entering upon a professional career. He said that the physician, above all other men, should be a gentleman and a man of honor. The profession is one of the highest and most sacred trust, which to violate must entail all the penalties of the basest treachery. The poor, he said, are ignorant and obstinate. Eadeavor to enlighten and instruct them in matters of health. Teach them how to procure fresh air —how to repel all foulness and impurity. Let the town or village or city where you dwell be in the town or village or city where you dwell be in some way the better for your presence there. Epidemics and forms of pestilence will be more hopefully encountered by patients if thus pre-

paren beiorehand.

After the delivery of the address, a large lot of bouquets were distributed among the graduates, to whom they had been sent by their friends.

A benediction was then pronounced and the audience dispersed.

TEMPERANCE MEETING .- A temperance meeting was held last evening in the Lecture-room of the Church, Seventh street, above Brown, this being one of a series of meetings held for the same object at this place. H. Sleeper presided. The attendance has gradually increased, and the meeting last evening was the largest of any yet held in this place. During the month a large number of persons signed the total abstinence pledge. An address was made by Hiram Ward, who spoke of the rapid spread of intemperance. He attributed it to the free license given for the sale of intoxicating liquors by our Legislature, and pointed out the remedies necessary for the eradication of this evil. J. L. Fortescue followed, and gave an interesting history of his experience among our Courts, showing how, after conviction and a brief imprisonment, criminate with had been guilty of high crimes tracenals, who had been guilty of high crimes traceable to the immoderate use of liquor, had been pardoned and let loose upon society. He deprecated the evil consequences of this course, and hoped that it would ere long be remedied. The concluding address was made by Dr. Coats, who showed the importance of church-members exerting their influence in behalf of the temperance

"THE FORTY THIEVES."-Two youths named Thomas McCarty and Thomas Doran, who are said to belong to a gang known as "The Forty Thieves," were arrested yesterday by Policeman McKibbin, of the Tenth District. They are McKibbin, of the Tenth District. They are charged with having committed several robberies in the Sixteenth and Seventeenth Wards. From the house of Samuel Wile, No. 943 North Sixth street, six silver egg-cups were stolen and were sold for \$1 to a tavern keeper. Mr. Michael Conlan, residing at America and Jefferson streets, lost two cloaks, one broche shawl and a lot of silver coin. The flour store of Amos Twining, at America and Oxford streets, was entered by prying a board from the door, and was robbed of a hundred weight of flour, a clock and two coats: hundredweight of flour, a clock and two coats; and the house of Mrs. Doner, in Cameron Place, Fourth street, above Master, was robbed of two coats, a pair of pantaloons and a watch. All of these robberies have been traced to the accused, who will have a hearing at the Central Station

A BAD Boy .- A juvenile, named Joseph McNelll, was arrested yesterday at Twenty-third and Race streets upon the charge of assaulting a man named George Black. It is alleged that he stoned Black and also spat in his face. McNelli-was committed by Alderman Panceast.

A SAVAGE FELLOW.-Peter Wilson was ar rested, yesterday, at Eleventh and Christian streets, upon the charge of having threatened to kill H. S. Fernly. It is alleged that he threatened to blow his brains out and also to "split his skull." Wilson was committed by Alderman Wilson was committed by Alderm in

JUVENILE INCENDIARIES .- Two boys, named John Blackney and Eugene Smith, were arrested yesterday by Lieut. Smith, while in an old house at Thirteenth and Christian streets, endeavoring to set fire to the premises. Alderman Bons all sent the juveniles to prison.

STEALING FROM THE GAS WORKS .- William Whey and John Howell were committed yester-day by Ald. Ramsdell for stealing lead and lead pipe from the Gas Works at Manayunk.

ALLEGED WIFE BEATER. - Charles Williams, residing at No. 908 Wood street, was before Ald. Massey, yesterday, upon the charge of assault and battery on his wife. He was held in \$400 to

PROP. DICKSON'S Valedictory Address for siles at P. Madeira's, surgical-instrument maker, Tenth below Chestnut.

CITY NOTICES.

\$1,000 RHWARD FOR THE COUNTERFEITER OF

\$1,000 RHWARD FOR THE COUNTERFEITER OF HELMHOLD'S BUGHD.

HOW TO DETECT IT

THE GENUINE HAS THE NAME BLOWN ON BOTTLES.

THE COUNTERFEIT HAS NOT.

The Gennine is a dark brown color, in odor is strong and somewhat aromatic, the taste bitterish and analagous to mint, in accordance with the properties set forth in the Dispensatory of the United States. The virtue of the leaves is extracted by aid of spirits.

The Counterfeit is of various colors, sometimes black as a simple water colored with ink, with no taste or oder.

oder.

In other cases light, as though water colored with molesses, and of similar tasts and idor. And, again, simple water, with no coloring or odor, except that a few drops of mint may be added. None of the counterfeits contain any spirits.

Unquestionably, the business has been carried on for some time and to a considerable extent, and the self-

ing has been managed by experts, who depend upon the external appearance, without regard to quality or contents of bottle.

So great has been my confidence in the steel engraved wrapper and label executed by the Mational Bank Note Co., of New York, at great expense, that I have on several occasions suspicioned and accused the patient with removing the label from the front of the genuine bottle, and adulterating or filling other bottles with some liquid, thereby endeavoring to procure an additional bottle free of expense.

My name and address not being blown on the spurious, Those newer used my bottle without this precaution. I have purchased all my bottles for twelve years from Messra, Sheets & Duffy, Kensington Glass Works, and each and every bottle has the following plainly blown on three sides of the bottle: H. T. BELMBOLD'S GENUINE FLUID EXTRAOTS, PHILADELPHIA.

HELMBOLD'S GENUINE FLUID EXTRAOTS.
PHILADELPHIA.

THE SPUBIOUS HAS NOT,
and in the genuine the lettering can be felt without
removing the wrapper in a majority of cases.

I have been in consultation, with Messrs, Sheets &
Duffy in regard to the matter, and they assert they
have never made any bottles for any one of the pattern
of the spurious since they have been engaged in business. The complaints recently in regard to the medicine

nees.

The complaints recently in regard to the meddine have been quite numerous; some patients would have a spurious bottle with genuine label, and others would have genuine outside wrapper and no bottle, and not until within a few days did any present the spurious bottle done up with genuine wrappers and ghosts.

The first case of this kind occurred ten days since, and was brought to my notice by Mr. Goo. O. Porter, Druggist, 842 Broadway, N. Y., who returned a half-dozen spurious bottles. I then came to the conclusion that the wrappers were stolen, or a transfer of the original plates taken by a dishonest engraver.

The intelligence was startling. I immediately proceeded to ferret out the perpetrator. I have every confidence in my success. Patients need have no uneasiness hereafter. Druggists, as a class, are honorable. All have been notified of the existence of the spurious. Patient and druggist can readily detect by the explanation set forth in this article.

Another very important thing to druggists, that

the explanation set forth in this article.

Another very important thing to druggists, that quite a quantity of the spurious has already fermented, and such a third has never occurred to the genuine. I cannot imagine what impression the afflicted have formed of me, who have, been so unfortunate as to have parchased the spurious, or the injury done my name and business. But my friendly relations and extensive acquaintance in the trade, and the precautions I have taken, will prevent its recurrence. I will greatly appreciate it if the druggists will examine their stock at once and report to me, and I will protect such from loss. tect such from loss.

Any information derived leading to detection will warded with \$1,000, and at the same time thank-

fully received.

H. T. HELMBOLD.

104 South Tenth street, Philadelphia, and
594 Broadway, New York.

P. S.—Since the insertion of the above, the following Druggists have kindly reported and returned the spurious article, and been supplied with the genuine:
J. L. Shoemaker, Sixth and Girard avenue.
George Evans, Sixth and Poplar streets.
Thomas Gorden, Eleventh and Master streets.
Charles Souder, Thirteenth and Jefferson streets.
H. Clark, Girard avenue, near Twelfth.
B. A. Bethel & Co., Eighteenth and Coates
G. L. & D. Horr, Second and Beaver.
Dr. J. A. Cantrell, Second and Carpenter.
D. Jameson, Third and Catharine.
J. A. Milliac, Tenth and Shippen.
W. H. Pile, Paseyunk road and Catharine,
Jas. S. Everton, Fourth and Queen.
T. Marshall, Thirteenth and Market,
J. T. Weaver, 1341 Ridgo Avenue.
Dr. F. Zerman, Twelfth and Christian.
R. Triet, 922 South Ninth street.
A most atriking proof of the progressive spirit H. T. HELMBOLD.

A most striking proof of the progressive spirit of the times may be seen in the marvelous perfection of that remarkable invention, the American Button Hole and Sewing Machine, when compared with any of the old mechanisms in this line. The rapid development of improvement as seen in this new and splendid machine, and the astounding degree of excellence attained, are, indeed, almost incredible. And what is most gratifying in this connection is the fact that this is altogether a Philadelphia institution, the Company being located here, with their factory at Twentieth and Washington avonce, and Salesbooms S. W. Con of Eleverth and Chestric stra. We commend this extraordinary machine to the notice of all who are interested in such matters; and to those who design purchasing family machines we say, by all means examine the American. A most striking proof of the progressive spirit

TRAGEDY IN BRIDGEPORT, ILL.

A Family Poisoned. The Chicago Journal of the 10th says:
To-day we are called upon to chronicle another horror, and one which, in its details, is of a most revolting and heart-rending character. The circumstances of this last terrible sensation are as

follows:
Situated on Farrell street, in that portion of

Situated on Farrell street, in that portion of the city known as Bridgeport, stands a small house. In this habitation resided Morris Finn, a laboring man. Finn is an Irishman. His family consisted of his wife and two children, one two years of age and the other an infant. Up to Saturday evening Finn attended his work regularly. His absence was noted by his follow laborers, but was not thought much about.

fellow laborers, but was not thought much about. When, at length, Monday passed and he still had failed to appear, serious apprehensions were entertained that he or some of the members of his family were very ill indeed, or had probably died, and it was determined to ascertain the cause of his prolonged absence. An investigation was therefore set on foot yesterday forencon.

One of the exploring party, a Mr. Farley, went around the house, and peering into the kitchen window, saw Finn's boots standing by the stove, from which they were convinced that he was in the house.

the house.

The party then proceeded to the opposite side of the house, in which is the window of the bedroom. A look through this window, though but a glimpse was obtained, resulted in the discovery that both Finn and his wife were in bed, it being then nearly one o'clock in the afternoon. Assistance was precured and a forcible entrance

made, when a most
sickening scene
was presented to the gaze of those who were prewas presented to the gaze of those who were present. Stretched upon that bed lay the lifeless corpses of the mother and her children, traces of decay showing that decomposition had already commenced. The mother had evidently died in the most violent paroxysms. The father was in the same bed, and at the moment the room was entered was at the point of death. He was terribly weakened, and nearly unconscious, and when found was stretched directly across the corpse of one of his children. It appeared that whatever the cause of their deaths, that all had been similarly affected.

whatever the cause of their deaths, that all had been similarly affected.

The next step on the part of the discoverers was to summon a clergyman, and the family being Catholic, the Rev. Father Luby, of. St. Bridget's parish, was called in. Dr. Bidwell was likewise summoned to attend to Finn. The latter, under the doctor's treatment, was restored to partial consciousness, and an attempt was made to obtain from him a statement of the effic. Only obtain from him a statement of the affair. Only incoherent and disconnected sentences have been obtained from him. These were to the effect that obtained from him. These were to the effect that he had been taken quite seriously ill on Saturday night, and had procured a box of pills from a neighboring drug-store, some of which he had taken, and had become delirious. He professed to be unaware that his wife was dead, but it was hard to decide whether he was willing to reveal what he really knew, it seeming, at times, as though he was not as thoroughly unconscious as be endeavored to appear. as be endeavored to appear.

The Coroner was next notified and arrived on

tained that deceased had died from the effects of polson. As there seemed to be a chance of Flun-recovery it was decided not to hold an inquisit on the remains for the present, and until the results of a chemical analysis of the contents of the stomachs shall be known.

Drs. Pitcher and Simon made a post mortem ox-

Drs. Pitcher and Simon made a post mortem oxamination of the mother and the eidest child, with the same result in each firstance. The presence of arrenic was indicated by the highly inflamed condition of the stomachs, while the symptoms exhibited by Morris Finn's sufferings also led to the belief that that poison was the deadly agent swallowed by the deceased and by him.

The whole affair, so far, is shrouded in mystery.

Some are of opinion that Finn first poisoned his family and then swallowed a dose of the mixture himself; but those who indulge in this theory can himself; but those who induses in the theory can advance no basis for their supposition. Others, without being able to criminate or suspect any person or assign any cause, believe that some enemy of the family sought their destruction, and took the course indicated to accomplish his or the course indicated to accomplish the opinion that the family may have been accidentally poisoned by some article of food of which they had partaken on Saturday evening. during supper.
