New York Money Market

(Special Despatch to the Phila. Evening Builetin.)

New York, April 16.—The money market is cocier at currency to coin interest, alternately, with more doing at the currency rate. The change in the aspect of the market, together with the pleasant weather to-day, has imparted a feeling of buoyancy, resulting in a large general advance in prices throughout the market. Governments are active and excited, with a very large general demand and an advance on the prices of the new bonds. The principal features are the new '65's and '67's, quoted at 115, being the highest point ever reached for those bonds. All the foreign bankers are heavy buvers for European account. Gold opened at 13214. for European account. Gold opened at 1321/4, advanced to 1338/4, owing to the belligerent tone of Senator Sumner's speech, and the rumor that Secretary Fish was assuming a less conservative position in Cuban affairs.

THE AUROBA.—The display of northern lights In the heavens last evening surpassed in brilliancy and beauty any exhibition that we have had in this latitude within ten or twelve years. The ylow of the aurora was first perceptible upon the horizon immediately after surset, and as the darkness of night increased at other points, the northern heavens grew brighter with the celestial radiance, until at eleven o'clock the entire hemisthere of the heavens was in a glow. Over the northern horizon there was a luminous arch, from which the light sometimes fell as moonight struggling with mist, sometimes glittering with the prismatic colors, hashed upward to the zenith. The neavens were filled with streamers undulating like the waving of grass before the wind—leaping us from the horizon to the zenith in a flash, playing for a moment overhead, and then dying out, only to burst forth in new shapes and in unexpected places a moment afterward. The spectacty was sublime, unerlifectal and awe-haspiring beyond the power of language to describe. Those who radiance, until at eleven o'clock the entirechemithe power of language to describe. Those who failed to see it missed an opportunity that is rarely offered in this quarter of the globe. The appearance of the Aurora Borealis last night was the most remarkable that has occurred since 1869, both in respect to auroral display in the heavens, and disturbing influence on the tele-graph wires. The storm struck New York City from the north at 750 in the evening and from that time until 8 o'clock, the artificial batteries of the Western Union Telegraph Company were neutralized, and regular despatches were cent through the agency of the great atmospheric tattery which nature for the time being furnished. The aform temporarily subsided for a time, and the artificial batteries were again used. But at 10 o'clock the auroral battery again struck the wires, with the power of at least 400 cups, and from that time on until 12 o'clock, with varying force, the electric storm furnished the telegraph companies with all the electricity they wanted.

It is to be supposed that every man would insure his life if he thought it at all probable that he would die within a year or two. But he neglects insurance because he has no idea but that he will live for many years to come, and thinks that in that case his premium would be thrown away. But he is mistaken. Life insurance, taken out in a company such as the 'American." of Philadelphia, is a good investment, even to those who live long. Such small amounts of money as the annual payments could not be invested in any other way with equal security and profit.
