THE ECLIPSE.

All About It...The Peculiarities of the Phenomenn...The Best Place to Examine Them...The Scientific Par-

lies, A.c. Whoever may be, whether from choice or necessity, within the line of the central cellipse of the sun next Saturday afternoon, eclipse of the sun next Saturday afternoon, will witness a phenomenon not to be seen again during the current century. The eclipse comes on in Siberia, moving northeasterly till it crosses a little to the south of Behring's Straits, and turning southeasterly after traversing with its black shadow the continent of North America, is dissipated in the Atlantic Ocean beyond the North Carolina coast. It is the spinning of the moon in her appointed orbit from west to cast, at the rate of forty miles a minute, that occasions the necesforty miles a minute, that occasions the neces sity for the following of this particular track across the continent; while it is the time consumed by her in travelling that short segment of her course, which limits the career of the eclipse to a length of a little more than sixty-six hundred miles.

echase to a length of a little more than sixtysix hundred miles.

According to a notice addressed to meteorological observers along the line of totality in
the United States, the central line of the belt
passes near the following cities and towns:
Leesburg, Magnolia, Clinton, Fayetteville,
Carthage, Lexington, Mecksville, Wilksboro
and Boon, North Carolina; Blountsville,
Taylorsville, Kingsport and Union, Tennessee:
Eastville and Bristol, Virginia; Mount Pleasant, Manchester, Mount Vernon, Harrodsburg and Louisville, Kentucky; Corydon,
Newton, Haysville, Bruceville and Washington, Indiana; Robinson, Greenup, Shelbyville,
Stonington, Springfield, Petersburg, Bath,
Macomb and Laharpe, Illinois; Burlington,
Mount Pleasant, Fairfield, Oskaloosa, Monroe,
Mitchellville, Des Moines, Boonsboro, New
Munich, Lake City and Cherokee, Iowa

Excellent points for witnessing next Saturdark deigner, the heavens will be Newbern

Munich, Lake City and Cherokee, Iowa.

Excellent points for witnessing next Saturday's doings in the heavens will be Newbern or Raleigh, in North Carolina; Abington, Va.; Shelbyville, Ky., or Springfield, Ill. If one chooses, and has already set out on the journey, he can enjoy the sight likewise in Iowa, Nebraska, Dakotah, or Montana; while Mr. Seward's reception party will view it in the newly purchased territory of Alaska. Within seventy miles of the centre of the eclinse's seventy miles of the centre of the eclipsestrack, the solar disc will for a single instant be totally obscured: but directly in the middle of its path, the duration of the eclipse will vary from two minutes and twenty-three seconds to

three minutes and forty-seven seconds.

It is said that "no total eclipse of the sun has been visible in any considerable portion of this country since 1834, and none will be visible after this year during the present century." In these times the astronomers, in-stead of waiting patiently at their observastead of waiting patiently at their observa-tories for the eclipse to approach them, which it may do in the course of centuries, have ac-quired the habit of taking their observations to the central line of the eclipse. On this oc casion scientific parties will go to various points along the line, some sent by the United States Government and some by private en-terprise, to study interesting problems rela-tive to the sim's physical constitution. The destination of most of the scientific par-ties is Burlington, Iowa, and its vicinity. That

ties is Burlington, Iowa, and its vicinity. That point is selected because it is the best situated of those which are equally accessible. The further west we go the earlier in the day will the eclipse occur, until we reach Alaska, where it comes about noon. This is both on account of the difference of apparent time (it being a the same actual moment sunset on our Atlantic coast and near noon on the Pacific) and because the moon travels over the sun from west to east, so that it takes nearly two hours of actual time for the shadow to traverse our continent. The nearer to traverse our continent. The nearer to noon the phenomena occurs the better for observations, especially photographic ones, as there is less risk of haze or cloud about the sun. The duration of the total phase is also longer where the eclipse occurs at noon; for then the surface of the earth is moving nearly in the same direction as the moon and its shadow; and so tends to keep in the shade longer. Near sunrise or sunset the surface of the earth would be simply moving toward or from the moon, and this motion (of one thou-sand miles an hour) would therefore have no effect in keeping up with the moving shadow. The duration of the entire eclipse, from first to last contact, will be about two hours.

Scientific men who are not astronomers pro-fessionally are latterly in the habit of studying with close attention the various phenomena connected with the withdrawal of the sun's on these occasions and the peculiarities o the light itself. A variety of instruments are now employed for the purpose of making ob-servations, and the record is one of universal interest when presented. There have-like-wise been noter certain rather remarkable phases of the moon as her form passed across the face of the sun, which men of science are

the face of the sun, which her of sales ager to verify and explain.

In witnessing modern eclipses, and this one in particular, the barometer, thermometer and hygrometer will be used, to ascertain the atmospheric effects of the phenomenon. The Morton party and the Pierce party are to bring back with them such photographs of Morton party and the Pierce party are to bring back with them such photographs of the scene as its brief duration will enable Mr. Black to take with his instruments. Stray planets are also to be looked up during the sun's convenient obscuration, in particular that or those within the orbit of Mercury. On the whole, an amazingly small pinch of time is given by the busy heavenly bodies for the most dexterous astronomers to hurry up their observations, and even for that they are all sincerely grateful, as the world should be

all sincerely grateful, as the world should be to them in turn.

The PROGRAMME.

The following sketch of the appearance of the eclipse will be read with interest:

"For the convenience of our readers we give a short description of the phenomena to be expected. As regards the appearances under the heads of 3 and 5, a spy-glass or small telescope will be necessary to reveal them to satisfaction.

"1. When the sun is more than three-fourths."

"1. When the sun is more than three-fourths hidden by the dark disc of the moon, a per-ceptible gloom is thrown on all the landscape around. Soon after the sky appears to descend the horizon to contract, the temperature of the air falls, birds cease their singing flowers close, an uncarthly greenish and reddish light is imparted to portions of the sky. a sudden darkness ensues, and everything wears a mysterious and gloomy aspect. "2 Jumediately before the last trace of the

12. Immediately before the last trace of the sun's disc disappears, the awful shadow of the moon in the air may be detected rapidly approaching from the west like a dark column or a sombre cloud. To witness this impressive sight care must be exercised, lest, in the excitement of the moment, the swiftly approaching shadow be unheeded.

"3. The last thread of light from the sun's disc sometimes appears to separate into little grains or heads before its total disappearance. This phenomenon has received the name of 'Barly's Beads,' from the noted astronomer who first witnessed it.

Barly's Beads,' from the noted astronomer who first witnessed it.

"4. Instantly on the extinction on the sun will be seen the grandest feature of the eclipse—the corona, or crown of light, issuing on all sides apparently from the purple-black disc of the moon, though in reality from the sun. It is the atmosphere of the sun rendered visible by the absence of the overpowering sunlight. As the light is dazzlingly white, a piece of snoked glass will enable you to survey it without the inconvenience which might otherwise arise.

In the corona, and issuing also appa-

erwise arise. I

"5. In the corona, and issuing also apparently from the dark moon, there will appear several rose-colored flames projecting beyond the gloomy disc, perhaps a tenth of the diameter of the moon. They, too, belong to the sun, and are demonstrated by the spectroscope to be incumbescent lightnoopen. With every eclipse they vary in size, number, shape, position and depth of color.

"6. Planets and large stars are often noted during total eclipses by those who have previously studied their position on a celestial map. As the darkness hardly exceeds that of a moonlight night, they are not always readily found in the two or three minutes of gloom that attend the entire obscuration of the sun. By a little study of the map at the commencement of this number one may be able to recognize the most conspicuous planets and stars that will be visible.

"When the sun reappears, the phenomenon of Baily's Beads should be again looked forthis time on the right side of the moon's disc. The awful shadow will afterwards be seen sailing rapidly away in the air tothe castward. Then follow the changes of color in the sky

The awini shadow win anerwards be seen sailing rapidly away in the air to the eastward. Then follow the changes of color in the sky and landscape, the rising of the thermometer and ageneral awakening of nature, and the wonderful exhibition is over."

The Tribune says of the eclipse:
Comparatively few of our readers will be so fortunately located on the 7th of August as to come entirely within the cone of shade, which reaches from the moon to the earth, and thus he enveloped for a brief interval with the mantle of a lunar night; yet a large majority may witness, if the sky is cloudless, a partial celipse. Those who have no astronomical instruments at command may amuse teemselves by watching from some commanding eminence the changes in the color of the landscape, or by noticing any variation in the form of those small spots of sublight sometimes found under trees, which are miniature suns made. in nature's camera, when an isolated ray of light penetrates the foliage and reaches the ground. Our metropolitan readers will be glad to know that the partial eclipse will commence in this city at ten minutes after five o'clock and continue until sunset, so that a man may, after business hours, repair to the house-top

with his family and there witness, through his smoked opera-glass, a spectacle vast and magnificent, and long to be remembered.

Those who expect to see signs of approaching night during a partial celipse will be sadly disappointed, for light does not seem to diminsh rapidly until about four-fifths of the sun's disc has been covered. Immediately inferribe period of total absuration the illustration of the sun's disc has been covered. after the period of total obscuration the illumination is almost instantaneous, and the observer is surprised by a flood of light. This effect is doubtless due to the enlargement of the pupil during the darkness, by which the eye is prepared to receive the most delicate impressions, and to become correspondingly sensitive to the rapidly increasing solar rays.

#### CITY BULLETIN.

The Temperance Movement---Convention to Nominate a City and County Ticket. In accordance with a call published in the newspapers a meeting of delegates of "The Prohibitory Party" assembled at Concert Hall this morning. The Convention was to have been composed of three delegates from each Ward, but at the time the proceedings communical there were twenty-six persons (explumenced there were twenty-six persons (exclumenced there were twenty-six persons (exclusive of reporters) present in the room.

The Convention was called to order shortly after ten o'clock by I. Newton Pierce. Geo.

H. Hicks was chosen temporary chairman, and Alex. R. Cutler secretary.

Mr. Alex. Sloan opened the proceedings with prayer.

Mr. Hicks then said that men of both po

Mr. Hicks then said that men of both political parties are greatly dissatisfied with the nominations made, and are anxious to have an opportunity of voting for good mon. They desire a separate and distinct ticket, to be composed of good, honest and sober men, instead of had, unreliable, drunken men. A preliminary meeting was held and the matter of the expediency of calling a convention was discussed. A Committee was appointed with power to call a Convention, to be composed of delegates from different Wards. composed of delegates from different Wards, to nominate a ticket—a ticket in which integ-rity and worth shall be the standard value. The time has come for this movement, and he hoped that it is not far distant when a State Convention will be called for the nomination of a ticket, and the organization of a State Temperance political party. [Applause.] The Temperance people have been depending on the existing parties for many years, and have been told to wait. They have waited until patience has ceased to be a virtue. If the 'political parties will not act, those in favor of the temperance cause must rely upon themselves. The speaker then returned his thanks for his selection as chairman, and hoped that the business of the convention would be despatched with harmony, and that no attempt would be made to turn it into a rabble, as pre vious conventions had been, so that the work can be speedily accomplished and a formidable ticket be presented to the citizens of Phila-

James McCormick was then appointed door-teeper. The following committees were then appointed:

On Credentials-George Goebel, George W. On Permanent Organization—Amos Briggs, On Permanent Organization—Amos Briggs, J. C. Garrigues, Hugh Whitely, Alex. Sloan, S. S. Ketchum, Henry Dubree, James Pollock. On Platform—I. N. Peirce, Rolt. H. Lang-shaw, J. W. Rowley, Wm. Tannier, R. Grant Barnwell.

It was then agreed that every person not a delegate should leave the room. The Committee on Credentials then made a report on the credentials. Ten wards were resented, and but few of the delegates mentioned in the credentials answered to their names. At this time there were 31 persons in

Mr. Briggs, of the Committee on Permanent Organization, reported for permanent

President-Geo. H. Hicks. Secretary—Alex. R. Cutler

Secretary—Alex. R. Guller.
The report was agreed to.
Mr. Amos Briggs; by request, then delivered in address upon the subject of temperance.
The committee on resolutions reported the

Wherees, It is the legitimate province of government to render its citizens secure in the encreise of their rights and the enjoyment of their privileges, and as every great principle or reform must, of necessity be first advocated or reform must, of necessity be anst advocated by some party; when existing parties neglect to recognize it, then it becomes the imperative duty of intelligent citizens to organize a new party for the purpose of securing that reform which seems necessary for the public

good. And,
Whereas, The appalling increase of the rum Whereas, The appailing increase of the rum traffic incom midst calls loudly upon all friends of morality to use their influence for its overthrow; and as neither of the present political parties has the courage or will to pay any attention to the demand for reform in this respect, but rather yields to the dictates of corrupt combinations, and succumbs to their behests by nominating for office those who have for years, if not a life-time, been identified with the liquor traffic, and whose gain and interests are with this prolific source of crime and misery; therefore, Resolved, That we, citizens of Philadelphia, in convention assembled, feeling the responsiin convention assembled, feeling the responsi-bility of our position, and the sacrifice neces-ary to be made in the maintenance of great principles, do solemnly accept the issue, and unite ourselves into an Independent Party, I ased upon temperance and moral principles, but thou a platform sufficiently broad to inbut upon a platform sufficiently broad to invite and embrace the good and honest men of all parties; to reform the abuses of our municipal government, and to nominate men of known virtue, pledged to sustain these prin-

riples;

Resolved, That as the dishonesty and corruption, as well as the selfishness and tyranny, of partisan leaders have at length excited the disgust and scorn of the better classes in both parties, we repudiate their nominations, and parties, we replicate their nominations, and believe that free government can only be maintained and perpetuated by elevating to office men of honesty, integrity, strict sobriety, and unequivocally in favor of prohibiting the

liquor traffic.

Resolved, That freemen should not feel impelled to vote for a candidate whose antecedents are immoral and corrupt, or whose nomination has been procured by himself or his friends' resorting to some dishonest or unfair expedients.

friends' resorting to some dishonest or unuar expedients. Atsolved, That we believe the traffic in the manufacture and sale of intoxicating liquors is an unmitigated evil, a gigantic source of crime, and the cause of a large portion of our taxes, and should be suppressed by stringent legislation; and that economy and refrenchment in our numicipal government; a correction of the present abuses, a better regard for the welfare and interests of the citizens, shall be among our leading principles.

ne among our leading principles.

Resolved, That we invite the citizens of Philadelphia to examine the character of the candidates we present and consider the principles we proclaim. Are not the former worthy the suffrages of the moral portion of the community, and are not the latter right in the sight of God, and worthy the support of every intelligent person?

God, and worthy the support of every intelligent person?

Resolved, That this party be called "The Independent Reform Party."

The resolutions were adopted.

The President then appointed a Finance Committee, as follows: J. C. Garrigues, Geo. Goebel, Alexander Sloan, Wm. [Tannier, Alexander R. Cutler, James McCormick and Americans.

Mr. Briggs moved that a Committee of one from each Ward be appointed by the President, to be called "The Committee on Ways and Means," for the purpose of organizing and conducting the campaign. conducting the campaign.
Agreed to.

On motion of Mr. E. W. Smith, it was resolved that the names of the committee be amounced through the newspapers.

Mr. I. N. Peirce then delivered a short address upon the objects of the Convention.

Adjourned until this afternoon.

THE REGISTRY LAW-ANOTHER QUESTION BEFORE THE COURT.—This morning Mr. Sellers, for Mr. John C. Smith, called up before lers, for Mr. John C. Smith, called up before Judge Brewster the application for a mandamus, made by Mr. Smith, to compel the assessors of the Fifth Ward to place his name on the Division list of the Sixth Division of the Ward. The suggestion sets forth that John C. Smith "is a native citizen of the United States, and of this State; that he is 29 years of age; that he has resided for 27 years last past in that part of the city now the Sixth Division of the Fifth Ward thereof: that he now resides at the thereof; that he now resides at the southeast corner of Fourth and ..... streets in said division; that he occupies a room in the second story of the said house, wherein he is a boarder and lodger; the house-that is, the dwelling part thereof—is occupied by Mr. Joseph Garwood; that he has made application to George Concannon and Hector Williams the preserved lianis, the assessors of said ward, to be assesse the Registry Act of April, 1869, but the said Hector Williams has refused to do so upon the ground that the lower story of the build-ing is occupied as a tavern; that a certain Stephen Williams occupies said lower story as a tavern, but it is not connected in any way with the rest of the building, which is occupied as a private boarding-house by said Joseph Garwood, who rents the same separate and disconnected from the tavern.

Mr. Sellers read the twenty-seventh section of the Registry law in support of his position, that Mr. Smith was entitled to be placed on the division transcript, because Mr. Garwood is a "private householder," and not the keeper of a tayern, &c., and because Mr. Smith is a qualified elector residing actually with this private householder.

Mr. Dropsie, for the assessors, contended that they had followed the law, and that Mr. Smith could have his name placed on the list at the proper time in the manner prescribed by the Registry act. Mr. Sellers again addressed the Court, point

ng out the injustice to result from the act of Judge Brewster suggested that the one difficulty in the way of this relator is that there are other remedies provided by this and other laws. Under this law it may be by applica-

Mr. Sellers—That is to say, to put him on a list, but not on the list which gives him the rights of an elector?

rights of an elector?
Judge Brewster—Being on a supplemental list gives him the right to vote. There is a remedy also at the polls, where he may make the proper proof. I merely make these suggestions in order that counsel may argue.

Mr. Sellers said that the list in question was not the list which determines of itself the sight of the electron to the list in the not the list which determines of itself, the right of the elector to vote. He is entitled to have his name on that list, though he may not intend to vote. It is his right to have his rights as an elector determined in this As-sessors' list.

Mr. Dropsic read the 28th section of the act, showing that the elector could go before the

canvasers and there have a remedy for any neglect of duty by the assessors.

Mr. Sellers suggested that under the act of 1839, providing for assessors, the rights of the minority are guarded by placing a representative of the minority in a position to do so. Under the Registry law it is different, for there the majority rule is recognized, a hajority of the Board of Aldermen selecting the canvassers, and the canvassers acting through a majority.
The Judge announced that he would give his

decision before Saturday. ROBBERY ON CHESTNUT STREET.—A small class jewelry case, in front of the store of Geo. A. Eno. at the southeast corner of Geo. A. Eno. at the southeast corner of Eighth and Chestnut streets, was opened by some thief or thieves, with a false key, between seven and nine o'clock this morning, and the contents, consisting of, gold chains and jewelry, to the value of about \$1,000, were stolen therefrom. The robbers made their escape with the plunder unnoticed.

A MURDEROUS ATTACK.—Geo. Schrader, a butcher in the Girard Avenue Market-house, yesterday used very insulting language to a lady. He was reprimanded by Policemen Wilson and Wagner. Schrader did not like to be interfered with and he drove the officer

away with a butcher knife, and threatened to kill them if they returned. He was subse-quently arrested. Ald. Allison held him in \$800 bail to answer at court. THE NATATORIUM AND GYMNASIUM.—This valuable and important institution was estab lished years ago by Dr. Jansen, on Broad street, below Walnut, and he has brought it to great perfection. Physical education has been the subject of many essays; its importance in developing the muscles and strengthening the

developing the muscles and strengthening the human frame, thereby invigorting health and prolonging life, has been stated time and again. The Physical Institute of Dr. Jansen is complete in all apartments and arrangements, so as to afford entire convenience and comfort of the patrons. In the lower or first story is an extensive bathing tub, which is continually supplied with streams of pure water. The bottom of the tub is an inclined plane, and the water is three feet deep at one end and ten feet at the other. Everything necessary to enable young people to learn the art of swimming has been introduced. Springing boards, rings, swings, handholts, floats, cords, &c., &c., are at all times present, the uses of which bring all the muscles into full play and activity, consequently strengthening and developing them; all the muscles into full play and activity, consequently strengthening and developing them; and at the same time the novice is learning how to swim. The upper part of the building is appropriated to gymnastic purposes, and everything here is arranged in accordance with those scientific theories which are supposed to be essential to physical development. Here we have swinging ladders, cloud swings, or flying rings, the wooden horse, horizontal bars, parallel bars and ladders. Of course, in an institution like that of Dr. Jansen much indement is rebars and ladders. Of course, in an institution like that of Dr. Jansen much judgment is required to prevent the pupils overdoing their work." In this respect the rules of the institution are well digested, and they are strictly conformed to. Dressing-rooms are arranged with regard to strict privacy. They are furnished with everything necessary for the convenience of those who have occasion to use them. Both seves attend the Institute of them. Both sexes attend the Institute at

stated times.
Swimming is an art that should be learned by everybody, for on some occasions it might be found very useful. We remember a case sustaining this suggestion. Many years ago Colonel John K. Murphy established the Franklin Swimming School in the vicinity of Twelfth and Locust streets. Among the pupils were quite a number of girls who learned to swim. In after-life, one of them, seeing a man in danger of drowning, near Cape May, proceeded to his rescue and saved
