Che Bloomfield Gimes.

Tuesday, December 6, 1870. FARM AND HOUSEHOLD ITEMS

We invite communications from all persons who are interested in matters properly belonging to this department.

A New Discovery With Corn.

An intelligent and reliable neighbor of ours, who has for many years been making experiments with corn, has discovered an importance and value in replanted corn, which is quite novel and worthy of publication.—We have always thought replanted corn was of little consequence, but this gentleman says " it is of so much consequence, he replants it whether it is needed or not-orrather, he plants two or three weeks after the corn is planted, a hill about overy fifteenth row each way." He says: "If the weather becomes dry during the filling time, the silk and tassel both become dry and dead. In this condition if it should become seasonable the silk revives and rerecover. Then, for want of pollen, the minutes. new silk is unable to fill the office for which it was designed.

The pollen from the replanted corn is then ready to supply the silk, and the fill-ing is completed." He says nearly all the abortive ears, so common in the corn crop is caused by want of pollen, and that he has known ears to double their size in this second filling .- Ex.

Extra Food For Hogs.

Coal, ashes and elay, are beneficial for hogs, when shut up to fatten. Hogs are very fond of cinders, coal, ashes and clay, and improve in condition in cating a certain portion of them every day. Some persons are unable to account for this singular propensity in swine, Poultry are very fond of egg shells, lime, sand etc., and it is well known that the substances are necessary in order to form the shells of eggs, and to furnish material or bones of fowls. Now it is reasonable to suppose that swine eat ashes for the purpose of supplying material for their bones and this singular instinct in animal so low in the scale of intelligence, is truly wonderful for ashes contain ingredients which are necessary to from bones, viz: clay sillica, coal, soft lime, stone, and rotten wood, etc., with their food, which contain the necessary ingredients; but when they are pent up they endeavor to supply the material necessary for keeping up their frames by devouring ashes and cinders. Let them have plenty of them .- Farm Journal.

Loosening Ground Glass Stopples.

Sometimes ground glass stopples of bottles become, from one cause or another, fixed in the neck and cannot be removed by pulling or turning. An effectual method is to wrap a rag wet with hot water around the neck, and let it remain a few seconds. The heat will expand the neck of the bottle, when the stopple can be removed before the heat penetrates the stopple itself. Or, wind a string once or twice around the neck, and, holding the bottle between the knees, pull alternately on one and the other end, thus creating friction, and consequently heat. Or a little camphone oil dropped between the neck and the stopple of the bottle will often relieve the stopple.

Giving Poultry Warm Quarters.

Now is the time to arrange poultryhouses for the winter; don't wait until winter is here. Make their houses as warm as you possibly can. and when eggs get up to forty or fifty cents a dozen, they will repay you for all your care and expense. If possible, place their house on the south side of the barn or sheds, so that it will be protected as much as possible from the cold bleak north and northwest wind. A good plan is to plank up the outside with plank, and upon the inside nail up with odds and ends of boards, and fill the space with sawdust, shavings, mortar, in fact anything that will keep out the wind. Keep everything thoroughly clean about poultry

To Make Old Kid Gloves New-

Make a thick mucilage by boiling a handful of flaxseed; add a little dissolved soap; then when the mixture cools, with a piece of white flannel wipe the gloves, previously fitted to the hand; use only enough of the cleaner to take off the dirt, without wetting through the glove.

New Method of Making Bread.

Tie up one pound of rice in a thick linen bag, allowing ample room to swell; boil it three or four hours until it becomes smooth paste; mix this, while warm, with ten pounds of flour, adding the usual quantities of yeast and salt; allow the dough to work a certain time near the fire, after which divide it into loaves. The flour should be dusted in, and most vigorously kneaded. This quantity of rice and flour has produced twentysix pounds thirteen ounces of this excellent bread, which keeps moist and sweet longer than that made by the ordinary

Something News

Beat three oggs very light stir thom with one pint of milk, slice some bread, dip into the eggs and milk, fyr to a nice brown, sprinkle powder sugar and cinnamon on the top. This is a French treat.

Graham Biscuit.

Make Graham mush as for the table when cool mix with it Graham flour sufficient to roll well. Knead for a few minutes, roll three-fourths of an inch thick cut with a common biscuit cutter, and news its growth but the tassel does not bake in a hot oven, from thirty to forty

NEW YORK CONTINENTAL

THE KIDNEYS.

THE Kidneys are two in number, situated at the upper part of the loin, surrounded by fat, and consisting of three parts, viz: the Anterior, the Interior and the Exterior.

The Anterior absorbs. Interior consists of tissues or veins, which serve as a deposit for the urine and convey it to the Exterior. The Exterior is a conductor also, terminating in a single tube, and called the Ureter. The Ureters are connected with the bladder.

The bladder is composed of various coverings or tissues, divided into parts, viz.: the

ings or tissues, divided into parts, viz.: the Upper, the Lower, the Nervous, and the Mucous. The upper expels, the lower retains. Many have a desire to urinate without the ability; others urinate without the ability to retain.—
This frequently occurs in children.

To cure these affections, we must bring into action the muscles, which are engaged in their various functions. If they are neglected, Gravel or Dropsy may ensue.

The reader must also be made aware, that however slight may be the attack, it is sure to affect the bodily health and mental powers, as our flesh and blood are supported from these

Gout, on Rheumatism.—Pain occurring in the loins are indicative of the above diseases. They occur in persons disposed to acid stomach and chalky concretions.

DRAN SIR—I have been a sufferer, for upward of twenty years, with gravel, bladder, and kidney affections, during which time I have used various medicinal preparations, and been under the treatment of the most eminent Physicians, experiencing but little relief.

Having seen your preparations extensively advertised, I consulted with my family physiclau in regard to using your Extract Buchu.
I did this because I had used all kinds of ad-

vertised remedies, and had found them worth-less, and, some quite injurious; in fact, I de-spaired of ever getting well, and determined to use no remedies hereafter unless I knew of the ingredients. It was this that prompted me to use your remedy. As you advertised that it was composed of buchn, cubebs, and juniper berries, it occurred to me and my physician as an excellent combination, and, with his advice, after an examination of the article, and con-sulting again with the druggist, I concluded to try it. I commenced its use about eight months ago, at which time I was confined to my room. From the first bottle I was astonished and gratified at the beneficial effect, and after using it three weeks, was able to walk out. I felt much like writing you a full statement of my case at the time, but thought my improvement might only be temporary, and therefore concluded to defer and see if it would effect a perfect cure, knowing then it would be of more value to you,

I am now able to report that a cure is effected after using the remedy for five months.

I have not used any now for three months. and feel as well in all respects as I ever did.

Your Buchu being devoid of any unpleasant taste and odor, a nice tonic and invigorator of the system, I do not mean to be without it whenever occasion may require its use in such

M. McCORMICK.

Should any doubt Mr. McCormick's statement, he refers to the following gentlemen:

THE GRAVEL .- The gravel ensues from neg-These Graves.—The graves ensues from neg-lect or improper treatment of the kidneys.— These organs being weak, the water is not ex-pelled from the bladder, but allowed to remain; it becomes feverish, and sediment forms. It is from this deposit that the stone is formed and

Dropsy is a collection of water in some parts of the body, and bears different names, accord-lng to the parts affected, viz.: when generally diffused over the body, it is called Anasarca; when of the abdomen, Ascites; when of the chest, Hydrothorax.

TREATMENT.-Helmbold's highly concentraed compound Extract Buchu is decidedly one of the best remedies for diseases of the bladder, kidneys, bladder, dropsical swellings, rheumatism and gouty affections. Under this head we have arranged Dysuria, or difficulty and pain in passing water, Scanty Secretion, or small and frequent discharges of water; Stran-gury, or stopping of water; Hematuria, or bloody urine; Gout and Rheumatism of the kidneys, without any change in quantity, but increase in color, or dark water. It was al-ways highly recommend by the late Dr. Phys-ick, in these affections. and pain in passing water, Scanty Secretion, or

This medicine increases the power of diges-tion, end excites the absorbents into healthy exercise by which the watery or calcareous de-positions, and all unnatural enlargements, as well as pain and inflamation, are reduced, and it is taken by men, women, and children. Di-rections for use and diet accompany.
