We invite communications from all persons who are interested in matters properly belonging to this department.

Hints to Housewives.

Perhaps some of our housekeeping readers do not know of certain economical expedients in domestic management, that have somehow crept into our practice. Brooms are so generally used and abused, that their freshness worn off they are too soon discarded. When a broom begins to succumb to wear and tear, place it in a pan of boiling water for a few seconds shaking it well, and drying it quickly in the sun or at the fire. If the bottom edge is wearing unevenly, the a string around it until it is dry, and trim off the uneven edge carefully. Whisk brooms should be treated in the same way.

Clothes pins boiled a few moments and quickly dried, once or twice a month, become more flexible and durable. Clothes lines will last longer and keep in better order for wash day service if occasinolly treated in the same way.

We have discovered a first-rate homemade cement for filling up cracks in an an old stove or range. The ingredients are wood ashes and salt ; reduce to a soft paste with cold water, and fill the cracks when the stove or range is cool. The cement will soon become perfectly hard. We keep an iron spoon in an old tin pan on hand, ready for duty whenever a crack appears. Fire clay (obtained at the stove dealers) will sometimes answer, but our homemade cement is always at command.

Food for Fattening Horses. 1.16

Many good horses devour large quantities of grain and hay, and still continue thin and poor; the food eaten is not properly assimulated. If the usual feed has been unground grain and hay, nothing but a change will effect any desirable alteration in the appearance of the animals. In case oilmeal cannot be obtained readily, mingle a bushel of flaxseed with a bushel of barley, one of oats and another of Indian corn, and let it be ground into fine meal. This will

let it be ground into fine meal. This will be a fair proportion for all his feed. Or the meal, or the barley, oats and corn, in equal quantities, may first be procured and one-fourth part of the oil-cake mingled with it, when the meal is sprinkled on cut feed.
Feed two or three quarts of the mixture wood the mixture wood three times daily, mingled with a peck of out hay or straw. If the horse will eat that greedily, let the quantity be gradually increased, until he will cat four and six quarts every feeding, three times a day. But avoid the practice af allowing a horse to stand at a rack well filled with hay. In order to fatter a horse that has y for straw, and lick the manger for more.
A Cheap Ice-House.
Throw a clozen or two of rails or poles on a piece of ground sufficiently inclined to care of straw of the mander to may not sufficiently inclined to care of the mander to a piece of ground sufficiently inclined to care should be faulty of a horse to stand at a rack well filled with hay. In order to fatter a horse that has so to stand at a rack well filled with hay of the standard to feed.

carry off water; fill the crevices between the poles with sawdust; cover with old ing winds of Spring or Autama. It should be carefully shielded from all irritating influences. The utmost caution should be observed in this boards, shabs or barks; get from the saw-mill a few loads of slabs; take four, say twelve fect long, notch the corners like a log-house, set them on the platform and yon have a crib about ten and a half feet square by the slab deep ; fill the crib with sawdust and pack it down hard. Cut your ice so that it will pack close, and two by four feet ; lay it on the sawdust ; put on another crib of slabs, and fill up and pack hard with sawdust all around, and so go on until you get up six or eight feet ; then put a foot and a half of sawdust on top; over this put a shed roof of slabs, one end of slabs nearly to the ice, raising the other three feet. If ice is all that is wanted, it will keep in this manner as well as in a varnished house.

THE CAUSE AND CURE OF

CONSUMPTION!

1.1

THE primary cause of Consumption is de-rangement of the digestive organs. This derangement produces deficient nutrition and assimilation. By assimilation, I mean that process by which the nutriment of the food is converted into blood, and thence into the solids of the body. Persons with digestion thus im-paired, having the slightest predisposition to pulmomary disease, or if they take cold, will be very liable to have Consumption of the Lungs in some of its forms ; and I hold that it will be without first restoring a good digestion and healthy assimilation. The very first thing to be done is to cleanse the stomach and bowls from all diseased mucns and slime, which is be done is to cleanse the stomach and bowels from all discased mucus and slime, which is clogging these organs so that they cannot per-form their functions, and then rouse up and restore the liver to a healthy action. For this purpose the surest and best remedy is Schenck's Mandrake Pills. These Pills clean the stom-ach and bowels of all the dead and morbid slime that is causing disease and decay in the whole system. They will clear out the liver of all diseased bile that has accumulated there, and rouse it up to a new and builty action, by which natural and healthy bile is secreted. The stomach, bowels, and liver are thus cleansed by the use of Schenck's Mandrake Pills; but there remains in the stomach an ex-cess of acid, the organ is torpid and the appe-tite poor. In the bowels the lattends are weak, and requiring strength and support. It is in a

and requiring strength and support. It is in a condition like this that Schenck's Seaweed Tonic proves to be the most valuable remedy ever discovered. It is alkaline, and its use will neutralize all excess of acid, making the stomach sweet and fresh; it will give perma-neut tone to this incontant organ, and create stomach sweet and fresh ; it will give perma-nent tone to this important organ, and create a good, hearty appetite, and prepare the system for the first process of good digestion, and, ul-timately make good, healthy, living blood – After this preparatory treatment, what remains to cure most case of Consumption is the free and persevering use of Schenk's Palmonic Syrup. The Pulmonic Syrup nourishes the system, purifies the blood, and is readily ab-sorbed into the circulation, and thence distrib-ated to the diseased lungs. There it ripens all morbid matters, whether in the form of absces-ses or tubercles, and then assists Nature to ex-pel all the diseased matter, in the form of free expectoration, when once it ripens. It is then expectoration, when once it ripens. It is then by the great healing and puryfying properties of Schenk's Pulmonic Syrup, that all ulcers and cavities are heated up sound, and my pa-tient is cured. The essential thing to be done in curing Con-mention is to cav up a coord anneting and a

City.

Jan. Th

The essential thing to be done in enring Con-sumption is to get up a good appetite and a good digestion, so that the body will grow in flesh and get strong. If a person has diseased lungs—a cavity or abscess there—rhe cavity ennot heal, the matter cannot ripen so long as the system is below par. What is necessary to care is a new order of things—a good appe-tite, a good nutrition, the body to grow in flesh and get fat; then Nature is helped, the cavities will heal, the matter will ripen and be thrown off in larce quanties, and the person will revain will heal, the matter will ripen and be thrown off in large quanties, and the person will regain health and sterength. This is the true and on-ly plan to cure Consumption, and if a person is not entirely destroyed, or even if one lung is entirely gone, if there is enough vitality left in the other to heal up, there is hope. I have seen many persons cured with only one sound lung, live and enjoy life to a good old age. This is what Schenek's Medicines will do to cure Consumption. They will clean out the stomach, sweeten and strengthen it, get up agood digestion, and give Nature the sys-

Juantity of lesh and strength. I was myself cured by this treatment of the worst kind of Consumption, and have lived to get fat and hearty these many years, with one lung mostly gone. I have cured thousands since, and very many have been cured by this treatment whom I have never seen. About the First of October I expect to take present of my new building at the North possession of my new building, at the North-cast Corner of Sixth and Arch Streets, where I shall be pleased to give advice to all who may

which is a most important constituent of the hu-man body, existing largely in the human body ex-isting largely in the Brain. Nervous System, Blood and Bones. It is the undue waste or deliciency of the life-giving and life-sustaing element, which is the innucliate cause of Consumption. Nervous Debility, Paralivis, Dispensa, Scrofula, Etc. Thel proper Remedy for the effectual treatment and cure of the above diseases consists in restor-ing to the brain, nervous system, lungs, and blood, their due proportion of Phosphorus. Weevils and Other Barn Insects.

A writer gives the following method for destroying wevils and other barn insects, which he has thoroughly tested by experinnce, and has the merit of being cheap and convienient:

"It is simply to sweep and clean out the granary, and then wash it all over on the the inside with strong pickle of common salt. This drives out all sorts of insects and worms, penetrates the timbers of the barn, and kills the worms which are so apt to get in them and cut them-and preserves the timber in a wonderful manner, After this process is repeated for several times the timbers of the barn become saturated with the salt, and will last for one hundred years. The pickle should be carried up and thrown upon the joist and sides of the barn, until the whole is thoroughly wet."

To Extract Ink from Floors.

Ink spots on floors can be removed by acouring them with sand wet in oil of vitriol and water mixed. Rinse them, when the ink is extracted, with strong pearlash water. ADIES AND CHILDREN will find a price store of F. Mortimer & Co.
