

Tolls on sheep are said to have the effect not only of keeping off dogs, but even wild animals.

A little black piece in a horse's nostril is a sign of the quick remedy known for cure.

Partners, if you have your money in tools, and then have them, you are not to the weather. It is the same as having money to a specialist without security—a dead loss in both cases.

To kill vermin in plants or water, pour a gallon of boiling water on one pint of tobacco leaves. Let it stand half an hour, and then strain. This decoction is certain death to vermin on plants or animals.

To Cure Scorpions in Horses—Wash clean with soap and give a complete coating of white lead to the diseased parts. The horse should be kept out of a city, if possible, as a cure is not probable when the cause is continually applied. Some suggest lincosin as the best application to be followed immediately by the lead.

KANSAS WINTER APPLES—A member of the Michigan Horticultural Society stated that the late Adams' apple, that he was very successful in keeping until fresh fruit in May by the following treatment: He picks the fruit in October, and places it on a board in the open air, and then washes with lye. The lye remains until the moisture of the apple, and the few inches of lye prevent any injury to the apple, even during sharp frosts. They are then removed and packed in barrels, which, after being up, are placed in a cold cellar which is kept at a temperature of 32°, and if it should happen to be a few degrees lower for a short time, the protection of barrels will prevent any injury. They come out sound in the spring.
