been carefully examined, and what is the resuit ? The geologist has come to know, that ! sult? The geologist has come to know, that even the mighty forests of America are in-considerable compared with the deposits of will certainly be for your interest to call and see me coal, nay, that all its forests gathered into one heap would fail to furnish the materials of a single coal scam equal to that of *Pitts*-*Dimock*, Jan. 14, 1857.-291 burgh ; and that centuries after all its thick woods shall have disappeared before the axe. and it shall have come to present the com paratively bare, unwooded aspect of the long civilized countries of Southern Europe, it will continue to derive the elements of its commercial greatness, and the cheerful blaze of its many millions of domestic hearths, from the unprecedently luxarious flora of the old carboniferous ages. Truly, very wonderful fine assortment of Fashionable Clothing, Faisols, are the coal fields of North America! If White Goods, Lacos, Edgings, Floundings, Collars geologists inferred, as they well might, that the extinct flora which had originated the European coal vastly outrivalled in luxuriance that of the existing time, what shall be said of that flora of the same age which orig-mated the coal deposits of the United States -deposits twenty times as great as all those of all Europe put together ?

Ilere is something very good about "fast driving :"

Some years ago, Spurr kept a stable .-Spurr had his peculiarities, one of which was this : he never let a horse go oat of the stable

without requesting the lessee not to drive fast. One day there came to Spnrr's stable a young man to get a horse and carriage to attend a funeral. "Certainly," said Spurr;

" but," he added, forgetting the solemn purpose for which the young man wanted the horse, "don't drive fast!" Wby, just look a here, old fellow," exclaimed the somewhat excited young man, "I want you to underexcited young man, "I want you to under-stand that I shall keep an with the procession, if it kills the horse!" Spurr instantly retired to a horse stall, and swooned amongst the straw.

"THE PAST AND PRESENT" OF HARLEM Findings, and Leather of all kinds. LAKE .- On the 7th of July, 1848, the work of draining the Harlem Lake, in Holland was commenced, and on the 1st of August, 1852, the official gazette announced that the bed of the Lake was dry. At the beginning of the presant year 17,000 hectares of good land were under cultivation on the site of the lake, divided into 2,518 farms and 157 dwellings, and 721 barns and other buildings had

ings, and 721 barns and other buildings had been erected. The population is 5157. ROUND-ROBIN.—From the French rond-ruban. A phrase originally derived from a custom of the French officers, who, on signing formonstrance to their superiors, wrote their names in a circular form, so that it might be impossible to ascertain who headed the list. The first signer was, of course, the ring-leader The first signer was, of course, the ring-leader -whence the origin of that term, now used to designate the prime mover of a mob or conspiracy.

SCIENTIFIC FARMER .- The Albany Knickerbocker says that there is a man in Greenbush who believes in rotation of crops. One year he raises nothing, the next year weeds.

At a debating society in Schenectady, the other day, the subject was : " Which is the most beautiful production, a girl or a strawberry ?" After continuing the argument for two nights the meeting finally adjourned old stand. A new stock of good just received. without coming to a conclusion-the old ones HENRY MCKINNEY. without coming to a conclusion-the old ones going for the strawberries, and the young mes for the girls.

R. H. EATON & CO., ciple is at once simple and beautiful, and ensures Harford, Susquehanna County, Pa. perfect accuracy, while the price will be three times less than of the scales now used .- Albany Express.

SMTTH'S PATENT PLATFORM SCALE .--- We have exan, ined this new invention. Nothing can be simpler on more completely developed than the principle up-on which its acts. The platform which sustains the weight lifts a pendulum, suspended and loaded at the

end, through an arc of a circle; and the indicator points out, upon the giaduated circumference, the exact weight. In other platform scales the measure of avoirdupois has to be ascertained by moving a loose weight on a beam, as on a steelyard, till it hits ad in all the precise point. Smrth's invention is a self-work-138111 ing one, and indicates at once, and to the minutest fraction, the figure. By attaching the weight on the end of the pendulum, the scale becomes multiplied

by fives or tens: by releasing the weight it, gives ounces instead of pounds. For household purposes, it is as cheap and far better than steelyards; and is finding the way to all well regulated kitchens where the receipt book, with its prescriptions of weights and proportions, is used .- Atlas and Argus.

A NEW IDEA-If anybody doubts that this is an in ventive age, they should call and examine Smyth's Self-Acting Bent-Lever Platform Scales. For simplic ity of design, and economy of space, they take prece-dence of any scales that have yet been invented.---There is one peculiatity about this scale; it possesses very little machinery, and can never make a mis-take so long as the laws of gravitation continue. Smyth's scale has another advantage—its small cost. -Knickerbocker.

SETTI'S PATENT PLATFORM SCALE .- This new and valuable invention was on exhibition at our State Fair just closed. Nothing in its department received more attention or was more generally admired or approved. This scale, possessing the extraordinary merits conceded to it at the East, cannot but be exceedingly valuable, and must, we think, come into

general use The Albany Evening Journal publishes the above and adds: This scale (Emyth's) was also exhibited at the State Fair at Watertown, and not only received every attention given it in Ohio, but carried off the first and highest premium awarded—a diploma and silver medal.—Cleveland (Ohio) Journal.

"SATTH'S SELF-ACTING BEST-LEVER PLATFORM SCALE."-The fundamental principle of every impor-tant invention has been very simple. In its simplicidaptability. Inventions of complicated movement

and visionary theories have never performed the ob-ject sought to be obtained, for with adaptability, ac-curacy and durability must be combined cheapness. All of these desideratums are involved in the inven-

HAS just returned from New-York, with a large tion recently patented and known as "Smyth's Self-and choice variety of GOODS, bought for Cash, Acting Bent-Lever Platform Scales." The scale in question, from its construction on the principle of gravitation, is never liable to be out of order. It must perform its work thoroughly, because the laws of na-ture govern it. In size the scale is a pigmy, but for capacity it is wonderful, weighing any object from one ounce up to four hundred pounds. It can be regulated by any one who looks at it but for a moment.

As their cost is but a trifle, they will speedily be as indi-pensably necessary in the household calendar as any other useful article of daily use .- Bee. Transcript.

others, we have been favored with an examination of the new and valuable invention (recently patent-ed,) known as Smyth's Self-Acting Bent-Lever Plat-form Scale." Mr. D. M. Smyth, the ingenious in-ventor, has spent some five years in the perfection of his work, and that he has attained perfection there each built will scale in construct there seems but little doubt. This scale is construct-ed upon a scientific principle which knows no varia-tion or change, and hence its accuracy is beyond question. Its capacity and strength is unprecedentquestion. Its capacity and strength is unprecedent-ed, while its form and the principle involved make it convenient and applicable to all purposes requiring scales of any description. It is free from any com-plication liable to variation or to get out of order. The great and important feature, however, of the scales made under this invention, is the fact that they can be afforded at about any fourth the fact that they can be afforded at about one-fourth the cost of any other platform scale of like capacity and accuracy in the world. The scale we have seen (a sort of pocket edition as compared with other platform scales,) has the wonderful capacity of weighing any object, from one onnce up to four hundred pounds. Posseesing the extraordinary merits and advantages con-ceded to this invention, it cannot but be exceedingly valuable, and the scales made under it, brought as they will be, within the reach of every family, must meet with an unprecedented sale, and come into imnediate and general use, as well to the benefit of the

public, as to those so fortunate as to secure the ex-clusive right of manufacturing and vending them.-State Register.

LIME AND PLASTER. THE subscribers are now burning and will keep a constantly on hand, Lime of a very superior quality at Montrose Depot, and will sell it in any quantities at a fair price. Persons wishing a large quantity can be supplied a pair a reasonable notice. Superior ground Plaster will be kept constantly on hand be appreciated and the section of the section o
