OPINIONS OF THE PRESS. **INVENTOR'S STATEMENT.** For some five years past, Mr. D. M. Smyth, of Pennsylvania, (one of our country's ingenious and scientific mechanics, has concentrated his mind and means upon an invention at length perfected, and for which letters patent have been just issued by the United States Government. This invention is known as "Smyth's Self-Acting Bent-Lever Platform Scale," and as this is the first public notice of the same, the inventor presumes, we shall take the liberty of expressing ourselves freely upon its merits. The platform of the scale is about 12 by 18 inches, and the whole scale is about 20 inches high. It is constructed of iron, and weighs only one hundred pounds. It is the only platform scale that can be used in any position, and is the only one that can be used in any position.
