Sing songs of holy edstacy, . To wait my soul on high, CHORUS. There will be no more sorrow there, There will be no more sorrow there, In heaven above where all is love,

There will be no more sorrow there. When cold and chilling drops Stand on my marble Break forth in songs of sweetest praise, Let heaven begin below. There will be no more sorrow there, &c.

When my last moments come, Oh! watch my dying face. To catch the bright seraphic light That in each feature plays. There will be no more sorrow there, &c.

Then to my raptured car Let one sweet song be given ; Let music charm me last on earth, And greet me first in heaven. Ther'll be no more sorrow there, &c. Then close my sightless eyes, And lay me down to rest, And fold my cold and jey hands

Across my lifeless breast. There will be no more sorrow there, &c. When round my senseless clay Assemble those I love,
Come sing of heaven, delightful heaven,
My glorious home above!

CHORUS. There will be no more sorrow there; There will be no more sorrow there; In heaven above, where all is love, There will be no more sorrow there.

From the N. Y. Tribune.

David Landreth and the Patent Office. A controversy between the Commissione of Patents and an eminent herticulturis; and seedsman of Philadelphia, David Landreth by name (son of the Landreth who first established the nursery and seed business in Philadelphia, seventy four years ago) has developed some facts that are of general linterest. Mr. Landreth frankly tells the public that the business of seed-distribution by the agricultural department of the Patent, Offic through members of Congress is a humbig and a nuisance, and not content with assertand a nuisance, and not content with asserting this, he goes very far toward priving it. Mind that Mr L. does not object to the designation and purchase by the seeds of valuable banks not already curthe seeds of valuable he only objects to the rent in this St the seeds of plants already distribution have provided the seeds of them. distribut here, many of them worthless, Wa same of them pestiferous, while many that do very well in Europe are atterly unadapted to our climate, and so worse than nothing. The carelessness or quackery of this Government seed-buying business had already been repeatedly hinted at in numerous agricultural journals, some of which have even gone so far as to charge that the purchase and distribution had degenerated into a mean job for lining the pockets of the func-tionaries concerned in it. It is the written or published quackery of Commissioner Holt that has proved so intolerables to Mr. Landreth. His superior knowledge of the business has enabled him to detect it, and his. pen has laid it bare, with an application of caustic so scorching as to be quite out of place as a fertilizer yet capital as a dressing. The Pennsylvania Horticultural Society

has specifically charged that the majority of such as previous experience had proved to so common as to be had at every village be had at any auction, and grafts that exist in every nursery. His attention has been now grappled with by Mr. Landreth gives little promise of their being corrected.-Speaking of seeds of the Brassica tribe, such as cabbages, turnips, &c., the Commissioner ed in Europe. Mr. Landreth emphatically contradicts this, and his lifelong experience and undoubted integrity will go very far

Mr. Landreth follows up his denial with a well-timed reproach: " Are you not greatly in error in permitting your office to decry the produce of your similarly engaged with myself should contend unprotected against foreign competition and the competition of the Patent office, with

the public purse and the public mail at its command, but that you should proclaim, in an official paper, that which is absolutely unsupported by facts?"

The fact is that foreign cabbage seed is

never imported except when the crop fails here. Even then, Mr. Landreth says, that not in one solitary instance that has come under his notice has this foreign seed produced a head of any value, except of early cabbage. It is quite as bad with turnip seed. "Even the ruta baga, from English seed,

though usually pure, semetimes grows with an elongated crown ("necky.") Besides, it must always, of necessity, be one year old but these facts are so simple and easily unwhen planted, while the American ripens in derstood that he dare not publish them. season for sowing the same year-a matter of importance at the south. An advertisement of a well known New York seed house, now before me, quotes all varieties of American turnip and ruta baga seed at fifty per cen higher than the imported-certainly not because the foreign is better, as you so confidently declare."

At a meeting of the Philadelphia Agricul-tural Society, Mr. Landreth exhibited fiftytwo specimens of turnips, all raised by him from European seed, including three varieties from the Patent Office. The greater portion proved to be decidedly inferior to the old kinds raised in this country, and two only were considered worth propagating.-He says, "The fact admits of no dispute that their English seed is of but little value when sown under an American sun." He charges the

Commissioner broadly, saying:

"Not only are you flooding the country with old and discarded varieties of seed, but are actually importing from England turnip seed of a variety which originated on my own grounds, which I specifically named, (adopted abroad,) and of which I distributed upwards of six thousand pounds raised by

myself last season." This is fairly running the seed into the ground, and putting the Commissioner, instead of the seed, through a regular course

of aprouts. Why, the people ask, is this extraordinary abuse of money and power continued in the doings of the Patent Office? Why are thousands annually squandered on the purchase ... and distribution of foreign seeds, some of which turn out to be the vilest weeds? Mr. 10 yards good Delaine for Landreth lifts the veil, and closes his interesting letter by revealing the secret. When 12 Judge Mason came in a Commissioner, Mr. Landreth waited on him, and represented, to 10 him the folly and evil of this proceeding.— 25 The Commissioner admitted that Govern- 16 ment was wrong in giving away seeds that might be bought anywhere in the country. He thought the funds should be exclusively devoted to obtaining from remote countries such plants, &c. as might not reach us thro' commercial channels. But he soon discovered that garden seeds, no matter how common, were demanded in unmeasured quanti-

women at home be complimented with something for their gardens? for, though having no votes themselves, they plead powerfully with those who have. Such was the pressure that Judge Mason yielded, sent a clerk to London and Paris in pursuit of seed under difficulties, and he spent near \$30,000 at a single seed store, when varieties of infinitely greater value might have been had at home. The practice has since become chronic, and should be abolished, root and branch. Mr. Landreth's brief exposition shows conclusive y that an elaborate and searching examination would reveal a multitude of improper acts connected with this business. He has made a good beginning, from which some patriot in Congress ought to take the hint of oushing it to an ultimatum.

From the Delaware (Wilmington) Republican. Facts for Mechanics and Laborers who are

Out of Employment. It is well known that our Government through Capt. Meigs, has just closed a con tract with Mr. Lawrence Myers, of Philadelphia, for a large lot of iron pipes for the water works at Washington, which works are being built at the expense of the Government; it is also known and acknowledged that said Myers is the agent, in this case, for a large Scotch iron establishment and that the water pipes for our own Capital are actually to be made in Scotland, while thousands of our own mechanics and laborers, engaged in this kind of work, are on of employment. It is also known that the price the Government pays is actually higher than the Messrs. Starr, of Camden, N. J., offered to make a large part of the pipes for, the great size of the contract and their limited capacity in comparison, only keeping them from taking the whole of it, the balance could no doubt tave been made around Philadelphia at Starr's price, but the giant iron concerns of

Scotland, built up by the Protection of Great Britain offer to take this whole contract (at a higher price, mark,) and deliver it here by 1st of October next, when it is at once given o them, and our manufacturers, though offering lower, are to stand idle, because it might he troublesome to divide the contract. We should think that such would have been the preference of our rulers in these dull times, especially, for our own people, that no such pitiable excuse should be offered.

Captain Meigs is to blame; first, for not dividing this contract so that several of our founders could take it, and second, for giving it to Mr. Myers, who has so small a foundry that every one who knew him was well aware that he could only fulfil it by subletting it; in the specification it is provided "that the Contract shall not be sublet or assigned."-Any blamed in this matter after this rests with the Democratic Policy, and the Democratic voters who, after triumphing over the Protective Policy, now find themselves suffering for work and bread, while their own money is being sent, by their own government, to employ the work people of another nation whose manufacturers have been built up by the continued fostering care of their

Government: but to the facts: We have taken some pains to place this transaction before our readers in its true light and have procured copies of the specification for this work which we will keep in our office, to show those interested in the subject. The weight of the castings which our Scotch friends are to make for us amounts to over seeds distributed by the Patent Office were thirteen millions of pounds, and will cost us about \$260,000. To those acquainted be of little or no value in this country, and with the business it is well known that the cost of making a ton of iron or pipes is near-The present Commissioner himself by entirely in the labor, the only thing to be has distributed roots and bulbs such as can bought of the capitalist or rich man of this country being the Coal and Orè leave, after this all is labor. Now, the right to take directed to these abuses, but his vindication, from the earth the materials to make this whole job would cost about seven thousand

requires a trial to prove it superior to every other portable light now in use. The material used for generating Gas is Burning Fluid or Aethereal Oil.—
The Gas is generated in the Burner by evaporizing dollars, and if we allow that the manufacturer here makes a profit of five per cent., (a doubtful case,) this would be thirteen thousand dol-The Gas is generated in the numer by evaporting and decomposing the Fluid by its own heat forming pure Hydro-Carbonic Gas which is all conveyed to the Burner, leaving no substance unconsumed. The Burner can be fitted to any ordinary Lamp, guaransays that they are more valuable when rais- lars more, leaving two hundred and torty thousand dollars to be divided among our own work people. At a dollar per day, here Burner can be fitted to any ordinary bamp, gamenteeing it to be perfectly safe and free from any danger of explosion and is entirely free from smoke and unpleasant smell.

The following calculation will show its economy are two hundred and forty thousand days' work, or in other words, employment for three thousand men from the 1st of July to the 1st of October, when the pipes are to be completed. Now, if three thousand men-were set to work, instead of doing nothing, country? Is it not enough that all who are how many articles would they buy, made by other workmen, such as shoe-makers, tailors, &c., and sold by farmers, store keepers, and

> We ask our working people to think of these facts. We should like them to call at our office and see the specifications of this mammoth job taken from them while actually suffering from want of work; these are no fancy sketches, gotten up for political purposes, but are facts and cannot be denied .-We challenge the Gazette to publish them and explain them, if possible, to the working men of our town and country; his sophistry and nonsense may avail him in some cases,
