Will never a moment stop
To see which dog may be in the fault,
But will shout for the dog on top.

But for me, I shall never pause to ask Which dog may be in the right,
For my heart will beat, while it beats at all,
For the under dog in the fight. Perchance what I have said I had better not said,

Or twere better I had said it incog., But with heart and with glass filled chock to the Here's a health to the bottom dog

About Salt. That universal table relish, salt, is a chemical compound of twenty three parts, by weight, of a beautiful silver white but soft metal, called sodium, discovered by Sir Humphrey Davy in 1807, and thirty-five parts of a pungent yellowish green gas, called chlorine, discovered by Scheele in 1774. This most useful compound is found in the sea and in the rocks, from which our principal supply comes. The most wonderful deposits are found in Poland and Hungary, where it is quarried like rock, and to a great depth. Other large deposits are found in Cheshire, England, where the water is forced down by pipes into the salt and pumped up as brine, which is evaporated and the salt obtained. To such an extent has this been carried that one town in the salt region has scarcely an upright house in it, the foundations having been undermined by the extraction of the salt. At Northwich, in the valley of the river Weaver, in England, there are two beds thick, which are supposed to constitute large that in a condition and the proper son has scientific, which are supposed to constitute large that in a condition to the constitute large that in a condition to the insulated masses, about a mile and a half long, and nearly thirteen hundred yards wide. In Virginia there are beds of salt, and the Salmon Mountains in Oregon, contain large deposits of the same material. The beds or masses of rock salt are occasionally so thick that they have not yet been bored through, although they have been mined for many centuries. This is the case with the mines at Wichezka in Austrian Poland, and the lower beds at Northwich, England. The brine springs of Salina and Syracuse, N. Y., are well known. There are also extensive saltsprings in Ohio. The brine is pumped up from wells made in the rock into which it flows. The brine is put into large iron kettles under which fires are built, and the process of evaporation proceeds rapidly. Salt earth's crust, which shows, says the Scientified American, that as the majority of these salt beds have come from lakes left in the hollows of the rocks by the recedence of the sea, the sea has through all geologic ages been as it is to-day. An illustration of this fact is found in the Great Salt Lake, which is the largest salt lake in the world, but by no means the only one, as such inland masses of saline water are found over the whole earth. It is situated 4,200 feet above the level of the sea, among the Rocky Mountains, and has an area of three thousand miles. Yet high as is the lake it was once a part of the sea, which retired by the upheaval of the rocks, and that great basin took its salt water up with it. Should this in time evaporate, and its salt-become covered with mud and sand, and the land again be depressed, it would become a part of the earth's crust, and

ally to the spot where now found by the wa-The ocean is, however, the most magnificent mine of salt, since the chloride consti-tutes about one thirtieth part of its weight. In warm regions the salt is extracted from the ocean by natural evaporation, as at Turk's Island, where great quantities are every year obtained in this way. Large shallow basins, called tanks or brine reservoirs, the bottom of which is very smooth and formed of clay, are excavated along the sea shore. Between them and the sea large reservoirs, deeper filled with food treshly taken.

These 3d From the almost deliver. communicate with the sea by means of a communicate with the sea by means of a channel provided with a sluice. The basins to the first of May, not a particle of vegetawhere the sea-water is evaporated are divided into a number of compartments by means gle bird. On the contrary, insects in great of little banks. All these compartments have a communication with each other, but as in every variety of condition as to growth so that the water has frequently a long circular and development, were the sole food. cuit to make, from one set to another. Sometimes it must flow four or five hundred yards food thus collected during this period consistbefore it reaches the end of this sort of laby- ed of one kind of larva, which, through the rinth. The water of the sea is let into these aid of Baron Ostensacken, Secretary of the reservoirs in the month of March, and is exposed on a vast surface to evaporation. The bled to identify as the Bibio albipennis, Say, first reservoir is intended to retain the water and whose history and habits, by the aid of till its impurities have settled, and from it the other reservoirs are supplied, as their Dr. As Fitch, entomologist of the N. Y. State Agricultural Society, I was enabled to water Cure, will be at Sasquehanna De-Water Cure, will be at Sasquehanna Sasque water evaporates. The salt is considered to be on the point of crystalizing when the water begins to grow red. Soon after this a were frequently taken from a single gizzard. pellide or thin saline crust forms on the sur- all in fresh, unmacerated condition; and usu-This, the salt, is drawn out, and then left upon the borders to drain and dry. The salt thus obtained partakes of the color of larva entirely disappeared from the gizzards, of the bottom on which it is formed; and is but, up to the 21st of June, was replaced by hence white, red, or gray. On the coast of a variety of insects or worms only, including San Francisco there are extensive natural spiders caternillars and beetles of the salt pans, which furnish an abundant supply family Elateridee, the parents of the well of excellent salt. In France and Germany salt water is pumped into great disterns on the tops of towers, whence it is allowed to flow down the surface of buildles of thoras built up in regular walls between wooden frames, which are exposed to the wind, in order to promote evaporation. After the brine has been thus concentrated, it is boiled down

the people of future ages would wonder perhaps, how it came there. There are also, however, salt rocks taking their place in regular geologic series with other rocks, and

can be accounted for only as other stratified

rocks, viz., that they were deposited from

in water or carried mechanic

To DELAY BLOSSOMS.—Any fruit tree may be made to bloom sufficiently late in the season to prevent its fruits from the frost, and to conclude that they were not fond of an exconsequently present a fine, heavy crop, by classively vegetable diet, but rather adopted

the following judicious treatment:

In the middle of the winter, when the ing it particularly during the enervating seating in the middle of the winter, when the son of moulting. At this season of the year, pile of wheat straw or oak leaves around the

for a splendid crop to follow soon.

The rationale of this simply is: the frozen earth will not thaw until late in the spring. if the pile remain; and while the earth is frozen the tree cannot bloom; but when the danger is past remove the covering, and the tree will bloom forth speedily. Try it, farmer friends - New Yorker.

Never, says a correspondent of the Country Gentleman, feed your horses with clover hay, as it will, nine times out of ten, grates southward—the few remaining eking produce the hances. Good, sweet Timothy but a minerable existence during the winter hay and oats are his best feed for a driving months, on bay harries (Myrica cerifera), horse and a quart or two of ship stuff at ariset berries (Liguetrum vulgare), and juniform the wants indeeping of ship stuff at ariset berries (Liguetrum vulgare), and juniform the wants indeeping of the berries (Liguetrum vulgare), and juniform to be berries (Liguetrum vulgare), and juniform to be berries (Liguetrum vulgare).

The care to the transport of the

How Clever Improved Land. A Western subscriber says: "Will you or some of your scientific correspondents, he so good as to explain, on scientific principles, how clover improves land; and also why it

the glands requires, and thus produces the

lobbering.
We do not claim to have answered the

nuestion, and leave it open to any one who

f in a horse at work, his feed should be

The other question, we think, is easily an

swered. Clover has long roots which pene-trate the earth deeply, and draw up its min-

eral food from a greater depth than most plants. Of course it draws less from the

soil contiguous to the surface, because fed

largely by that below. It has also a well ex-

panded foliage, and draws, for its organic el-

ements, largely from the air. Now if these

mineral elements, drawn from deep in the

soil, and the organic elements collected

from the air, when both are combined

in the full grown plant, be turned under, it is

manifest that so much is given to the soil for manure. We cannot, in this case, say given

come from the soil proper, but from above and below it; and the proper soil has ac-

and to pass into other plants, as in a succed-

ing crop of wheat; for instance.

But suppose the clover be cut off or fed off, instead of being turned in. Still nearly half

its growth is left in the soil : for the roots of

a clover crop are found, by investigation, to be nearly as heavy, when gathered and dried, as the tops. But in addition to the large

amount of tertilizing matter left in the soil,

its being perforated by so many roots and to

such a depth, may have something to do with the beneficial effects. May not these

perforations favor a natural drainage of the

soil by opening pores for the redundant wa-

that clover, by its strong, wide spreading,

in which clover may improve soils; believ

ing, however, that the good effects are due

mainly to the fact, that the clover acts as

collector of plant food for future crops, gath-

ering from the subsoil and the air and depos-

MEDICAL DISCOVERY OF THE AGE.

MR. KENNEDY, of Roxbury, has discovered in one of our common pasture weeds a remedy that cures EVERY KIND OF HUMOR,

The worst Scrofula down to a common Pimple. He has tried it in over cieven hundred cases, and never falled ex-cept in two cases, (both thunder humor.) He has now in his posses-sion over one hundred certificates of its value, all within twenty uses over one hundred certificates of its value, all within twenty niles of Booton.

Two bottles are warranted to cure a nursing some mouth.

One to three bottles will cure the worst kind of Finples on the face.

Two or three bottles will clear the system of biles.

Two bottles are warranted to cure the worst canker in the mouth of standards.

It was not not be considered to cure the worst canker in the mouth of standards. ipelas. Une to two bottles are warranted to cure all humor in the Eyes. Two bottles are warranted to cure running of the cars and blotch-Two others are variance to control tuning a samong the bites are warranted to cure corrupt and running uteer one buttle will enre scaly eruption of the skin. Two or three bottles are warranted to cure the worst kind of ring-term. Two or three bottles are warranted to cure the most desperate case. Two or three-bottles are warranted to cure the most desperate case.

Two or three-bottles are warranted to cure the most desperate case of rheumanism.

Three of four bottles are warranted to cure sait-Rheum.

Three of four bottles will cure the word case of Scrufula.

A benefit is always experienced from the first bottle, and a perfect cure is warranted when the above quantity is taken.

DEAR MADAN.—The reputation of the Medical Discovery, in curing all kind of humors, is as well established by the unantimous voice of all who have ever used it, that I used not say anythine on the subject, as the most skilling physicians and the most careful Druggids in the country are unantimous in its praise. The country are unantimous in its praise contribution of the subject, as the most careful Druggids in the country are unantimous in its praise. I do it with a fine presenting the Alectical Prosevery in relieving all, and curing most of those discusses to which you are unfortunately so liable.—That most excruciating disease to an affectionate mother,

NURSING SORE MOUTH, cured as if by a miracle; your own temper is restored to its natural aweetness, and your bake from short and fretful maps to calm an rect slumbers, and the Medical Discovery becomes a fountain of

Another Remarkable Cure! Another Remarkable Cure?

Point or Rocka, Frederick County, Md.
Dr. Swatze:—Deer Sitt-Belleving it adwyl Jowe to the public, and in justice to you, Phave thought proper to make known one of the most extraordinary cure, in my own case, that has ever reen ruly recorded. In the month of Cetoler Ind. I was afflicted with a severe gathering in my breast, which formed a large alloces, and a severe gathering in my breast, which formed a large alloces, and dischanged large quantilles of corrupton, external and internal. My breast would pass through my Lungs and on through the cavity of my breast with apparent case, attended with a violent cough, day and night, loss of appetite, and externe debility, so that my physician thought my cuse hopeless and beyond the power of medicine. I remained in this wretched condition for a long time, until I was wasted to a mere skeleton, and there seemed to be no hope for me; but having read in the public papers of the many wonderful cures performed by your Covercyn Strar or Wille Curax, I immediately sent to Bullimore for five botters and commenced life box, and to my great satisfaction and my annious family, the alocess or opening in my longs began to heal, and the cough abubiled, and on using ten my not this day, June 2, 1856. Thave not had a day's sickness for elepticen months.

Please seepen my grateful seknowledgments.
