

Agricultural.
and curd as it would save expense in fixtures. Because that portion coming in contact with steam, would be exposed to an excess of heat, and would not be effected by rennet like other portions which were not overheated. Consequently, a strict attention would not be maintained, which is necessary for a perfect coherency; and more or less would float off with the whey, or make trouble in curdling the cheese.
"Is a thermometer a sufficient guide in making cheese?"
A thermometer that is correct, is an indispensable guide in measuring the amount of heat to be used; but the time of raising the heat and continuing its effect, must be varied to meet contingent circumstances.—A. L. FISH. (To be continued.)—Cultivator.

Importance of a Good Market.
To the farmer, a good market is next in importance to good cultivation, and you may think it of sufficient importance to your readers to note the change the construction of the New-York & E. Railroad is now making, and destined to effect, in the production of turkey, geese, and chickens, for a large portion of this State.
That road was open to Binghamton the first part of the past winter; its first visible effect upon the price and new demand created in this section, was noticed by a large number of turkey, geese, and chickens, made by a man from the east, an average of twenty-five cents per pair on turkeys. They were carried some six miles to Binghamton, and taken through alive. Large quantities of fresh pork have passed here most profitably, and in great numbers, for New York by that road, as also, butter, lard, &c. Fat cattle have been bought in this region, and sent through on the road. Fat sheep are now being collected near here, to be sent by railroad.

What is the best age of a cow?
From five to ten years old. I have no objection to a cow ten years old for a season. She will consume more feed than a younger one, but her milk is richer till she begins to decline in condition, and lose vigor and strength.
"What is the most congenial food for cows immediately before and after calving?"
Twenty of good tender hay and grass, and a small quantity of such other food as is best calculated to loosen the bowels and nourish the system, without creating a fever in the secretory organs. Wheat bran, oat meal, potatoes, or other roots, are deemed best for that purpose. If a cow is in high flesh, a mild bleeding may be needed with half a pound of salts, fed in mash, previous to calving, is good.
"What quantity of grain will a cow bear feeding profitably, and should the kind be varied, at different periods during the milking season?"
All cows will not bear feeding alike.—Some not being deep milkers, would acquire too much flesh, and shrink in milk, with the same amount of food that others would turn to profit in milk. Hence the necessity of varying the ration, according to the needs in regard to the constitution and capacity of different cows. A man's observation in his own practice, is generally the best test in this matter. I have long since abandoned the practice of heavy feeding, or feeding immediately after calving. Two quarts of corn or barley meal, or four of oat meal, or six quarts of wheat bran, may be safely fed, daily, to each cow. While kept to hay, grain feed should be made into slop, and fed in the morning, and the evening. In feeding grain more, or longer than to bring cows to grass healthy and strong, would depend upon the comparative value of the feed with that of the product. Nothing can be fed to a cow that will increase the quantity of milk, or produce a good quality. The only gain in feeding grain to a cow during the milking season, is by enriching the milk and retaining the cow's appetite for it when grass fails. When first turned to grass cows are apt to scour, and shrink in milk. Dry sheep, hogs, and swine, will then be better than sheep, hogs, and swine, are too cathartic to feed in large quantities while the cows are at grass.
"Can all dairymen make it profitable to grow corn, sow broadcast or otherwise, to feed their cows?"
Where the soil is strong enough to bear a large burden without manuring too highly it will bear a profit as it is the best food that can be given to keep up the flow of milk between early and fall feed. But where the soil needs manure, it is not good practice here. The most certain way of getting in the larger vessel, the more uniform heat is conveyed to the milk. If a large tin vat is used, set into a wooden box or vat, the tubs attached to one end of the tin vat, and the other end of the tin vat, should be precisely smoothened, should be large enough to let off the whey at once, or the curd will settle or pack together, and require much hard labor, and will waste, by friction, in separating it and making it fine enough to feed and sell as many as the best milk.

What will produce the most perfect equilibrium of heat through the whole body, without the exposure to excess of heat.
A smaller vessel containing the milk or curd with whey, set in a larger vessel which contains water, through which heat is conveyed to the vessel containing the milk or curd, is the most certain way of getting in the larger vessel, the more uniform heat is conveyed to the milk. If a large tin vat is used, set into a wooden box or vat, the tubs attached to one end of the tin vat, and the other end of the tin vat, should be precisely smoothened, should be large enough to let off the whey at once, or the curd will settle or pack together, and require much hard labor, and will waste, by friction, in separating it and making it fine enough to feed and sell as many as the best milk.

What is the best mode of heating milk and scalding curd?
That which will produce the most perfect equilibrium of heat through the whole body, without the exposure to excess of heat. Important to Owners of Horses.
Dillon's Celebrated Hoarse Cure.
WHICH HAS BEEN USED IN SUCH GREAT QUANTITIES IN FRANCE AND ENGLAND FOR THE LAST 20 YEARS, IN THE TREATMENT OF ALL AFFECTIONS OF THE HOARSE, THAT IT IS NOW THE MOST CELEBRATED REMEDY IN THE WORLD FOR THIS AFFECTION. It is a simple, safe, and effective medicine, and is the only one of the kind that has been found to be so successful in all cases. It is a true and reliable remedy, and is the only one that has been found to be so successful in all cases. It is a true and reliable remedy, and is the only one that has been found to be so successful in all cases.

The Edinburgh Furrier.
The Edinburgh Furrier is a well-known and respected firm, established in the city of Edinburgh, Scotland. They have been in the fur trade for over a century, and their goods are renowned for their quality and durability. They have a large stock of furs, and are able to supply customers with the finest quality of fur goods. Their prices are reasonable, and their service is excellent. They are a well-known and respected firm, established in the city of Edinburgh, Scotland.

Andrews' Pain Killer.
Death is pain, relief to the sick, health to the weak, a balm to fangs in the whole human race.
This is the most powerful and reliable pain killer ever discovered. It is a simple, safe, and effective medicine, and is the only one of the kind that has been found to be so successful in all cases. It is a true and reliable remedy, and is the only one that has been found to be so successful in all cases.
