

Agricultural

Mr. H. T. E. Foster received at the last annual fair of the N. Y. State Agricultural Society the first premium for the best cultivated farm. From his statement of the management of his farm we make the following extracts...

SOIL AND STRAWING—Lakedland families on the eastern shore of Seneca Lake consists of 200 acres, of which 200 are under cultivation...

The soil is a clay loam, the subsoil being nearly a stiff clay, having a basis of slate rock, which in some parts of the farm, particularly near the lake shore, approximates the surface...

The best method of plowing is between six and seven inches, except when fall plowing is done; the furrow is then deepened by a portion of the subsoil may be acted upon by the frosts of winter...

The usual depth of plowing is between six and seven inches, except when fall plowing is done; the furrow is then deepened by a portion of the subsoil may be acted upon by the frosts of winter...

The subsoil plow has not yet been introduced upon the farm.

MANURES—Twenty loads of manure (30 bushels to the load), are usually applied per acre. On some portions of the land where a stiff clay predominates 30 loads per acre have proved advantageous...

Manure is allowed to accumulate in the yard until spring, when it is either applied to a green state, or drawn out and made into a heap, alternating the manure with layers of straw...

The manure is made from the straw of the different grains raised on the farm—and it is freely used as bedding in the horse and cow stables...

There is a bed of shell marl on the farm lying at the depth of two feet from the surface, which having lately drained, I intend using in the manufacture of compost...

season on a clover ley, plowed to a good depth, the wheat sown on the furrow, and then harrowed in. The crop proved most excellent. It may be here remarked, that the clover ley in this vicinity, have produced a better yield than the clover ley usually raised...

No experiments have been made to test the value of different root crops. Turnips were once raised, but with little success. Half an acre of carrots are annually grown for the use of the milk cows...

All the farming operations are conducted with accuracy. All the crops are measured and the results carefully recorded. A journal is kept of each day's work, in which the labor performed by every man is written and in a book kept for the purpose...

My land is kept in such a manner that the expense of the farm and the income from it, can be seen at a glance, and an accurate balance of debt and credit can be made at any time...

The following statement of the expenses and profits of the wheat crop of this year, will serve as an illustration of the manner in which this branch of my accounts is kept.

Table with 2 columns: Item and Amount. Rows include: Seed, 75 bushels @ 75 cents = \$56.25; Fertilizer, 100 bushels @ 25 cents = \$25.00; Harvesting, 100 bushels @ 25 cents = \$25.00; Total = \$106.25.

The profit on this crop of wheat, exclusive of the cost of cultivation, exclusive of the seed, is equal to 200 cents per bushel.

Similar statements could be given of every crop raised, but the above will suffice.

Farms For Sale. THE subscriber offers for sale three tracts of land, situated in the town of Monticello, containing 150, 100 and 50 acres, respectively...

Valuable Property FOR SALE. A large tract of land, situated in the town of Monticello, containing 150 acres, more or less, and well adapted for agricultural purposes...

N. Y. & E. Railroad! EVERY BODY'S MARKET LINE. Our routes are now prepared to receive FREIGHT of all kinds...
