

Poe's Corner.

THE MODERN BELLE.

The daughter sits in the parlor,
And rocks in her easy chair,
She's clad in her silks and satins,
And jewels are in her hair;
She winks and giggles and simpers,
And simpers and giggles and winks,
And though she talks but little,
She's vastly more than she thinks.

Her father goes clad in his russet,
And ragged and seedy at that;
His coat is all out at the elbow—
He wears a most shocking bad hat,
His board and saving his shillings,
So carefully day by day,
While she, on the beaux and poodles,
Is throwing it all away.

She lies a-bed in the morning
Till nearly the hour of noon;
Then comes down, snapping and snarling,
Because she was called so soon.
Her hair is still in the papers,
Her cheeks still dabbed with paint—
Remains of her last night's blouses,
Before she intended to faint.

She does upon men unashamed,
And men with the "daring hair,"
She's eloquent over monstrosities,
They give such a foreign air.
She talks of Italian music,
And fails in lore with the Moon,
And tho' a moose should meet her,
She sinks away in a swoon.

Her feet are so very little,
Her hands so very white,
Her jewels so very heavy,
And her head so very light,
Her color is made of cosmetics,
Though this she will neverown—
Her body made mostly of cotton,
Her heart is made wholly of stone!

She falls in love with a fellow,
Who struts with a foreign air;
He marries her for her money—
She carries him for his hair;
One of the very best matches—
Both are well matched in life!
She's got a fool for a husband,
And he's got a fool for a wife!

AMERICAN TRIUMPHS OF SCIENCE.

It is now about twenty years ago that we saw in the lecture room of the New York University the first rude model of Morse's Telegraph. It had a coil of wire one mile in length running round the room, and the experiments made by the students were very amusing and interesting, but no one but its inventor, and Professor Gale, (now Chief Examiner at the Patent Office in Washington,) seemed to have any real faith in its practicability. Now it has threaded every country of Europe and America, and a gigantic enterprise is even in progress to unite with it the eastern and western hemispheres. This generation has witnessed the succession of marvels of science entirely unparalleled in the history of man. The Arabian tales contain nothing more startling than what is now not merely a reality, but a very prosaic one. The iron horse, the talking wire, the self-moved stage, and the magic mirror are all every day matters, and in a few years a new silver will be extracted from the clay. Not only has the sea been forced to give up its secrets, but it will soon cease to oppose any barrier to the communication of men. The wire will probably soon be laid which will enable the merchant of London or Liverpool to send messages to his agent in New York or New Orleans with perfect regularity and accuracy, and receive an answer. In one month after the wire is dropped into the ocean, and the connection established between the two continents, it will cease to be wondered at and become a thing of daily use. But its magnificent and beneficent results will not wear out as soon as its novelty.

We can hardly measure these happy influences. The explanations of difficulties between the two Governments at Washington and London can be exchanged at once and settled in a day. Mercantile transactions can be carried on as expeditiously as if the parties on either side of the Atlantic were in the same counting-room; and instead of waiting for a week's installment of news, daily bulletins will be carried back and forth between the two continents.

At sunset the offices of the daily papers of New York may receive everything up to midnight in London, Liverpool and Dublin. The result of an election in New York might be sent in time for the morning papers in London, and an interesting debate in Parliament might be printed alongside of the proceedings in Congress.

This wire will indeed be a link of peace; it will give security and certainty to business operations, and prevent dishonesty by taking away all chance of escape and every loophole of error. There seems to be not the slightest doubt of the feasibility of the plan. The bed of the ocean appears to have been graded as it were by the hand of nature for the reception of this delicate conducting thread of iron. A soft layer of the finest and smoothest material, composed of minute shells many feet in thickness will receive the wire and protect it from injury, while the appearance of these shells indicates that hardly a ripple or motion ever stirs the liquid medium in those profound caverns of the deep, deep sea.

And then in the realms of profound silence and immobility, the thoughts of men and the revolutions of nations will hurry on the wings of lightning along the bottom of the sea from city to city, linking the continents, and making the race so long severed, one family by the ties of a common interest, and the art of an exalted civilization. A contemporary remarks that the first year of Mr. Buchanan's Presidency will not elapse before the Ocean Telegraph is completed, and a sketch of his first annual Message to the thirty-Sixth Congress will probably appear in the London Times on the day after its delivery in Washington.—*Syracuse Courier.*

PURSUIT OF KNOWLEDGE UNDER DIFFICULTIES.

The following is a remarkable and most praiseworthy instance of what perseverance and industry, rightfully directed are able to effect:

Among the graduating class at the commencement at Williams College, was one by the name of Condit, from Jersey. The gentleman is a shoemaker, married, and has a family of four children. Six years ago, becoming weary of the blessings of an education, he commenced learning the simple branches, such as are taught in our primary schools. One by one, as he sat on his bench, he mastered grammar, arithmetic, geography, &c., with some occasional assistance from his fellow workmen. At this time he determined to obtain a collegiate education. Without means, and with a large family depending on him for support, he commenced and learned Latin and Greek, after his day's labors were over, under the direction of a friend; and after the lapse of a year and a half, prepared for and entered the sophomore class at Williams College.

He brought his bench and tools, as well as his books, with him. The students supplied him with work; the faculty assisted him; and with the fund for indigent students, and some occasional assistance from other sources, he was enabled to go through the college course, and at the same time support his family. He graduated on his birthday, at the age of 32. He stood high in his class, and at his farewell meeting, in consideration of his talents, perseverance, and Christian character, they presented him with an elegant set of silver spoons, tea, and table, each handsomely engraved with an appropriate inscription.

Mr. Condit will now enter the Theological Seminary at New York, and will no doubt make a faithful and popular minister.

What young man in this country will ever after such an example as this, despair of obtaining an education!—*Springfield Republican.*

Length, Breadth, Thickness and Weight of the British National Debt.

The weight of the national debt in gold amounts to 14,088,475 lbs, or 6,289 tons, 9 cwt, 3 qrs, 13 lbs; in silver, 266,666,669 lbs, or 110,047 tons, 12 cwt, 1 qr, 14 lbs. To transport this debt across the seas, it would require a fleet of 25 ships, of 250 ton burthen each. To carry the debt by land it would require 12,850 one-horse carts, each cart being loaded with half a ton of gold. These would extend in one unbroken line 352 miles. If conveyed by soldiers, and every soldier were to carry 50 lbs. weight in knapsack, it would require an army of 291,789 men. Eight hundred millions of sovereigns piled one upon another, or formed into one close column, would extend 71 miles. If this column were commenced at the Land's End and continued Northward, it would reach ten miles beyond John O'Groats' House. The same number of sovereigns laid flat, in a straight line, and touching each other, would extend 11,048 miles, or more than one and three-fourths times round the moon. Eight hundred millions of one-pound Bank of England notes, sewed together, would cover a tumpike road 40 feet wide and 1,052 miles long, or from Land's End to John O'Groats' and nearly half way back again. If the notes were sewed together, end to end, they would form a belt long enough to go four times around the world and sixteen times around the moon.

The whole population of the world is estimated at a thousand million souls. An equal distribution of the national debt would give sixteen shillings to every man, woman and child, or four pounds to every family on the face of the earth. Were Britain to conquer all Europe, and levy a general poll-tax, to liquidate the present debt she must have from every man, woman and child 5 lbs. 17s. 7d. Supposing for a moment such a thing possible, as that we could procure from the Mexican mines silver in sufficient quantity to pay off the debt, it would require to bring it to England a fleet of 476 ships, of 250 tons each. To carry it to the Bank of England in one-horse carts, each containing half a ton of silver, it would take 238,093. These ranged in one unbroken line would extend 676 miles, or from Land's End to Wick, 24 miles from John O'Groats'. If carried by men, each loaded with 50 lbs. weight, it would require 5,333,333, or 1,391,033 in addition to the whole adult population of Great Britain.

The Evening Post tells the following of a thrifty Parson:—
"A donation party was given the other day to a clergyman in one of our New England villages, and among the articles he received was a superb 'tile' from the Genie of the place. The parson, much pleased with the hat, ventured to ask the donor what such a hat ought to be worth! 'That is an eight dollar hat,' was the reply. The parson turned over again, renewed his thanks to the hatter, and remarked that it was 'very fine, very fine indeed,' and so they parted.

The next day the parson ventured his way to the hatter's store, and after the customary salutation, took him aside, observed that he was not accustomed to wear hats worth eight dollars; that a four dollar hat was good enough for him—a plenty. He concluded by proposing to exchange the hat he had received for a four dollar one, and to 'take the balance in money.'—*Fact.*

Cool.—While at Windsor I took cold, and was laid up with a fever. I had been in bed three days, when my landlady came into my room.
"Well, Captain, how do you find yourself by this time?"
"Oh, I am little better, thank you," I replied.

"Well, I am glad of it, because I want to whitewash your room, and if the color-man stops to do it to-morrow he'll be charging me another quarter of a dollar."
"But I am not able to leave my room."
"Well, then, I'll speak to him; I dare say he won't mind your being so laid up while he whitewashes."

CATHARTIC PILLS.

OPERATE by their powerful influence on the internal viscera to purify the blood and stimulate it into healthy action. They remove the obstructions of the stomach, bowels, liver, and other organs of the body, and by restoring their regular action to health, correct whatever they exist, such as dyspepsia, indigestion, constipation, &c. An extensive trial of our Pills, by Professors, Physicians, and Patients, has shown cures of dangerous diseases almost innumerable. They are substantiated by persons of each exalted position and character as to the purity of their ingredients, and the safety of their use. The Agents below named are pleased to furnish you with a full and complete description of our Pills, and to use in the complaints which they have been found to cure.

For a full description of our Pills, and of such quantities as to gently move the bowels, and to remove the obstructions of the stomach, bowels, liver, and other organs of the body, and to use in the complaints which they have been found to cure. Hurrah for the New Store!!
THE undersigned take pleasure in announcing to their friends and customers that they have moved into the NEW STORE, with an entire new stock of Goods, consisting of every variety of merchandise kept in country or city. Friends give us a call! We do not sell at "old" prices, but at "new" prices, and honorably at "live" and "true" rates. We both preach and practice the true business principle of "quick sales and small profits." We will be distinctly understood, that we do not intend to sell goods on a long credit. Let it sell goods so low that the purchaser can afford to borrow money at twelve percent, and pay down for them. Salt, Flour, and produce of all kinds kept constantly on hand, and sold at lower rates than at any other establishment in town. To prove that we are not boasting, but telling plain truths in a plain way, call and purchase.
N. B.—All kinds of produce taken in exchange for goods.

New Milford, Feb. 8, 1856.

The Cheap Store,
NO. 28 COURT STREET.
THE undersigned would respectfully inform the inhabitants of Binghamton and vicinity that he has recently purchased of Edward Priest his large and well selected stock of
DRY GOODS,
which he has removed from La Fayette Block to No. 28 Court Street, one door above the American Store.
This entire stock has been purchased considerably below New York cost, enough so to warrant him in saying that he will sell Goods cheaper than can be bought at any other Store in town.

NEW SPRING AND
Summer Goods, to
