-All the houses in the vicinity of Lowinsville have been deserted by their Rebel inmates. Our soldiers make very free with the boards, which they rip off the houses and barns to make floorings for their tents. They evince a great partiality for doors and window-shutters, and all the houses therefore, present very forlors appearance.

CELEBRATED NOISELESS SEWING MACHINES.

FOR FAMILY AND MANUFACTURING USE. 495 Broadway, New-York. Agencies in all the principal Cities and Towns in the United States.

Towns in the United States.

The Grover & Baker Sewing Machine Company are now manufacturing, and have on exhibition at their different salesrooms, machiner making the Shuttle or Lock Stitch, of the same patterns and at the same prices as their celebrated Grover & Baker Stitch Machines, thus affording the public the advantage of comparing the stitches of the the leading machines and exercising their own independent of their respective merits. This is the only company that manufactures both kinds of machines and therefore the only one that can offer this privilege to the purchaser.

"We speak from experience when we say that, after having tried all the principal sewing machines, we must accord to that of Grover & Baker the pre-eminence.

Those indispensable features of sawing, strongth, uniformity, and elasticity, all of which are brought out in this incomparable invention, make it the first sewing machine in the country. Others have their good points, but this combines all, and possesses every characteristic necessary to make it most desirable."—N. Y. Christian Advocate and Journal.

"Ment vs. Partence.—We perceive that the Grover & Baker Sewing Machine is every day growing more and more in favor, both for manufacturing and family purposes—but especially as adapted to all the requirements of family use. Other machines, by dint of brazen purfery and conniving with committees at annual fairs, have been thrust forward into the first place; but they are fast losing this numerited position. The real merits of the Grover & Baker Machine, are beginning to be known in a practical way, and dally is the demand for thein increasing, while the demand for heretofore better known, but inferior machines, is proportionally decreasing. So it turns out in this, as in many other instances, that honcety is the best policy, and the right, in the end, comes uppermost.

"The points we conceive most necessary and impor-tant to meet the wide range of requirements in a machine for family, sewing. We find more fully combined in the Grover & Baker, viz. extent of capacity, simplicity of construction, ease of management, advantage of using thread from two spools without re-winding, attength of work, elasticity, durability and regularity of stitch, and quietness of movement. HELPER'S IMPENDING CRISIS.

BY GILDERT J. BEEBIN

[THIIS PAMPHILET, consisting of 64 double column 1 pages, was originally published pending the political canvass of 1860. The "Impending Crise, is a compilation of all the sophisms and malicious doctrines by which the public mind of the North had been so far pose oned as to produce the triumph of the Presidential candidate of the sectional party last fail. It was wide, yets culated gratuitously, by means of large contributions of money, and did more than any other thing to deceive the masses of our people. In this Review and Refutation, we take up each of its chapters separately, and ever time v. tant assumption in detail, sud refute them so completely that no intelligent person can read the pamphlet without the convincated of the faility of all the wicked assumptions of the Heiper book and of the folly of the section strife which has culminated in civil war. As there is its probability that peace will be permanently restored to our districted land until the public mind at the North is disabased of its erroneous impressions relative to the type character of our Southern sister States, most of whom arnow in rebellion against our general government, as the result of the triumph of sectional tunations both North and South, but the result of the probability to more effective means of accomplishing this result than by execusions.
