FLUID,

REPORT OF SOLON ROBINSON OF THE NEW-YORK TRIBUNE,

VINELAND SETTLEMENT.

The following is an extract from the report of Bolon Robinson, published in the New York Tribune, in feference to Vineland. All persons can read this report with interest.

Advantages of Farming near Hems—Vineland—Remarks upon Marl—Soil, its great Fertility—The Cause of Fertility—Amount of Crops Produced—

Cause of Fertility Amount of Crops Produced—
Practical Evidence.

It is certainly one of the most extensive fertile tracts in an almost level position, and suitable condition for pleasant farming that can of the oldest farms apparently just as profably productive as when first cleared tenly just as profably productive as when first cleared tenly just as profably productive as when first cleared tenly just as profably productive as when first cleared tenly just as profably productive as when first cleared tenly just as profably productive as when first cleared tenly just as profably productive as when first cleared tenly just as profably in the soil we find ovidences of calposit, and all through the soil we find ovidences of calposit, and all through the soil, in the form of indulated carefreens marl, showing many distinct forms of ancients of the tenly forms that in the mark condition most easily assimilated by such plants as the farmer desires to cultivate.

Marl, in all its forms has been used to fertilize crops in England, form the time it was occupied by the Romans; and in France and Germany a marl bed is counted on as a valuable bed of manure, that can be day and carted and spread over the field. How much more valuable then it must be when found already mixed through the soil, where new particles will be turned up and exposed, and transformed to the owner's use every time he stirs the carth.

Having then satisfied our minds with the cause, they

is must be when found already mixed through the soil, where new particles will be turned up and exposed, and transformed to the owner's use every time he stirs the carth.

Having then eatisfied our minds with the cause, they will not be excited with wonder at seeing indubitable evidence of furtility of a soil, which in our situations, having the same general characteristics, or at least, appearances, is entirely nurcanactarity except, as its productiveness is promoted by its artificial fertilization.

A few words about the quality and value of this land for cultivation, of which we have some strong proof.

Our first visit was to William D. Wilson, in Franklin township, Gloucester county, who purchased some eight miles north of Miliville, about three years ago, for the purpose of establishing a steam mili, to work up the timber into lumber, to send off by the new raifroad, as well as the frewood and coal, for which he built a track one mile and a half long. He also furnished sixteen miles of the road with ites, and had no doubt made the mill profitable, though his jamin object was to open a farm, having become convinced that the soil was very valuable for cultivation. In this he has not been disappointed, as some of his crops prove. For Instance, the second time of cropping, 306 bashels of notatoes on one acre, worth 60 cents a bushel in the field. This year, seven acres, without majure, produced 350 bashels of notation, on acre, worth 60 cents a bushel in the field. This year, seven acres, without majure, produced 350 bashels of notation, where they are some first, askes from clearings; second, 225 pounds, of superphosphate of limber; though and the first crop was potatoes, planted smoog the roots, and yielded 75 bashels of notatoes on one acre, worth 60 cents and yielded 75 bashels of notatoes on proposition, and then the ground was sown to clover and through, which gave as a first crup 234 tons perphosphate of limber, by an acre, and we wanted the most on the first company to the first conditions and second f

guano and seeded to wheat, gave 15 or 16 bushels. The crop which he was threshing while we were there promises more, of a very plump grain, and the straw is very heavy.

We went over the stubble and found the clover and timothy, from seed sowed last spring, on the whicat-with out harrowing, looking as well as we ever saw it upon any old-guiltivated farm, and with a little work done in the winter to clear oil some roots and rotten stumps, and setting stakes to mark permanent ones, we will be able to cut the crop next year with a mowing maching and we will gurantate two tons per acre, if he will give the overplus if it overruns the estimate.

Part of the land was planted with potatoes for a first crop, which yielded 120 bushels per acre. It was then limed with fifty bushels per acre, and seeded with wheat and clover, yielding an average of over 15 bushels per acre, and the clover now lioks beautiful.

Other portions have been planted with corn as a first crop, which yielded 32 bushels of yellow flint corn, and a second crop 40 bushels, and a third crop, treated to 150 pounds of guano, we are sure no one would estimate less than 40 bushels per acre.

[The reader will recollect the writer is now speaking of lands perfectly new, and which can scarcely be considered in good arable condition.]

In other cases the corn crop of last year was followed with eats this season, notyet threshed, but will average probably 40 or 50 bushels. Sweet potatoes, beans, nellons, and in fact, all vegetables, as well as young peach and other fruit trees planted this year, show very plainly that this long neglected tract of land should remain so no longer, and there is now astrong probability that it will not; for under the anspices of Mr. Landis, it will be cit into small lots, with roads located to accommodate allithe surveyor is now busy at this work—and all purchasers will be required to build neat, comfortable houses, and citter feace their lots in uniformity, or agree to live without a fence, which would be preferable, by which mea

LACKAWANNA & BLOOMSBURG RAILROAD.

VINELAND. TO ALL WANTING FARMS New Settlement in Vineland. A REMEDY FOR HARD TIMES.

Rare Opportunity in the Best Market, and mos Delightful and Healthful Climate in the Union. Only thirty miles south of Philadelphia; on a railread; being a rich, heavy soil, and highly preductive wheatland; Amongst the best in the Garden State of New Jersey.

IT CONSISTS of 20,000 neres of GOOD land, divided into farms of different sizes to suit the purchaser-from 20 acres and upwards—and is sold at the rate of from fifteen to twenty dollars per acre for the farm land, payable one-fourth cash, and the balance by quarter, yearly installments, with legal interest, within the term of four years.

four years. THESOIL

is, in great part, a rich clay loam, spitable for Wheat Grass and Potatoes—also a dark and rich sandy loam, suitable for corn, sweet potatoes, tobacco, all kinds of vegetables and root crops, and the great variety of fruit, such as grapes, pears, peaches, apricots, nectarines blackborries, melons and other fruits, best adapted to the Philadelphia and New York markets. In respect to the suit and crops there can be no mistake, as visitors can examine both, and none are expected to buy before so doing, and finding these statements correct—under these circumstances, unless these statements were correct, there would be no use in their being made. It is considered.

The best Fruit Soil in the Union. (See report of Solon Robinson, Esq., of the New York Fribune, and the well-known agriculturist, William Par-ty, of Cinnymiuson, New Jersey, which will be furn-

THE MARKET. By looking over a map the reader will perceive that it enjoys the best market in the Union, and has direct communication with New York and Philadelphia twice, a day, being only thirty-two miles from the latter. Produce in this market brings double the price that it does in locations distant from the cities. In this location it can be put into the market the same morning it is gathered, and for what the farmer sells he gets the highest price; whilst groceries and other articles he purchasees he gets at the lowest price. In the west, what he sells brings him a pittance, but for what the hay he pays two prices. In locating here the settler has many other advantages. He is within a few hours, by railroad, of all the great cities of New England and the middle states. He is near his old friends and associations. He has school for his children, divine service, and all the advantages of civilization, and he is near a large city.

THE CLIMATE

is delightful, the winters being salubrious and open, whilst the summers are no warmer than in the North. The location is upon the line of latitude with northern Virginia.

Persons wanting a change of climite for health, would be much benefitted in Vineland. The mildness of the climate and its bracking luffucuee, makes it excellent for all pulmonary affections, dyspensia, or general debility Victors will notice a difference in a few days. Chiland fevers are unknown.

Conveniences at Hand. Building material is plenty. Fish and oysters a

Visitore must expect, however, to see a new place.

Building material is pienty. Fish and dysters ary plentiful and cheap.

Visitors must expect, however, to see a new place.

Why the Property has not been Settled because it has been held in large tracts by families not disposed to soil, and being without railrond facilities they had few indocements. The railroad last just been opeated through the property this season, for the first time. Visitors are shown over the hand in a carriage, free of expense, and afforded time and opportunity for thorolinvestigation. Those who come with a view to settle, should bring money to secure their, purchases, as locations are not held upon refusal.

The safestthing in hard times, where people have been thrown out of employment or husiness, and possess some little means or small incomes, is to start themselves a home. They can buy a piece of land at a small price, and earn more than wages in improving it, and when it is done it is a certain independence and no loss. A few acres in fruit trees will secure a comfortable living. The land is put down to hard time prices, and all the improvements can be made at a cheaper rate than most any other time.

The whole tract, with six miles front on the railroad, is being laid out with fine and spacious avenues, with a town in the centre—five acre lots in the town, sell at from \$50 to \$200s, two anda half are lots, at from \$50 to \$200s, two anda half are lots, at from \$50 to \$200s, two anda half are lots, at from \$50 to \$120, and town lots 50 feet-front by 150 feet deep, at \$100—payable one half in cash and the balance within a year. It is only upon farms of twenty acres, or more, that four years time is given.

To Manufacturers, the town affords a fine opportunity for the Shoe manufacturing business, and other articles, being near Philadelphia, and the surrounding country has alarge population, which alfords a good market.

This settlement, in she course of several years, will be one of the most beautiful places in the country, and most agreeable for a residence.

It is intended to make it

Large numbers of people are purchashing, and people who desire the best location should visit the place at

once.
Improved land is also for sale.
TIMBER.—Land can be bought with or without timber. The timber at market valuation.
The title is indisputable, Warrantee deeds given, clear of all incumbrance, when the money is paid.
Boarding conveniences at hand.
Letters promptly answered, and reports of Solon Robinson and Wm. Parry sent, together with the "Vineland Rural."

Rutal.'

Route to the land:—Leave Walnut street wharf, Philadelphia, at 9 o'clock, A. M., and 4 P. M., (unless there should be a change of hour;) for Vineland, on the Glassboro' and Millville Railroad. When you leave the cars at Vineland, Station, just opened, inquire for CHAS, K. LANDIS, Postmaster, Founder of the Colony.

VINELAND P. O., Cumberland County, N. J. P. S.—There is a change of cars at Glassboro'. Also, beware of sharpers on the cars from New York and Philadelphia to Vincland, inquiring your business destination, &c. Jan. 1, 1863.—4m.
